PARCEL ID: 031 05&6 0000

PAYNE#: 22.111/001

Gentlemen:

In accordance with our signed agreement, Payne Environmental, LLC (PAYNE) has conducted a Phase I Environmental Site Assessment (ESA) of the property located at 31-105 & 106-165 Olson Drive, Ansonia, Connecticut (the property). The purpose of the assessment was to determine whether there is visible or recorded evidence of a release, or threat of a release, of hazardous or regulated substances, or petroleum products on the property or on any nearby properties where such a release, or threat of a release, could pose a risk of environmental impairment to the property; to evaluate the potential presence of recognized environmental conditions and/or hazardous building materials on the property.

EXECUTIVE SUMMARY

PAYNE completed all appropriate inquiries (AAI) of the above-referenced property in accordance with CTDEEP's "Site Characteristic Guidance Document (revised 12/2010) and ASTM E1527-21. This section summarizes the findings of the environmental professional. The reader is encouraged to read the entire report.

Property Description

The ±8.56-acre property is comprised of two (2) vacant parcels located along Olson Drive in the City of Ansonia, Connecticut. The parcels are divided centrally by High Street, creating a south parcel known as 31-105 Olson drive and a north parcel known as 106-165 Olson Drive. The subject property was formerly accessed by driveways leading from Olson Drive (eastern property boundary).

According to the City of Ansonia Connecticut Geographic Information System (GIS) & Real Property Information website, the subject property consists of a single parcel of land that is designated by the county as Map ID 031/05&6/000.

The property location is depicted on Figure 1 and the property layout is on Figure 2. Pertinent photographs are provided in Attachment B.

Site History

Historical research indicates that the subject property was developed in at least the mid-1880s. The 1884 Sanborn map depicts Jersey Street to bisect the subject property in a north to south direction. Properties along Jersey Street between the 1880s and 1950 consisted of a mixture of residential and commercial/industrial buildings. Commercial/industrial uses included but are not limited to: M. Olderman & Son Metal Refinery (southeastern boundary, 1900), New Systems Laundry (southeastern boundary, 1911 and 1924), "junk storage" (eastern boundary, 1924). Additional commercial uses included halls, restaurants, grocers and stores.

Flooding from Hurricane Diane in 1955 caused significant damage to the subject property area. A city redevelopment plan was put in place and the subject property and the tract across High Street to the north were purchased in 1961 for the construction of residential apartment buildings. During the 1960s, the subject property was re-developed with seven three-story residential apartment buildings, a mixed-use apartment/office building and a community center building. The subject property

remained in this configuration through 2008. In 2009, two of the apartment buildings on the southern portion of the property were demolished and in 2014 the remainder of the apartment buildings and the apartment/office building were demolished. The community center on the southern portion of the property was demolished between 2016 and 2017 at which point the subject property is depicted in its current configuration. Based on the length of time since the metal refinery, laundry and junk storage areas were present on-site and the location of these former uses in the vicinity of the former apartment buildings which would have resulted in earth working activities for re-development and demolition, these historical subject property uses are not considered RECs, in PAYNE's opinion.

The property was purchased from the City of Ansonia by Primrose Companies Realty, LLC on August 18, 2022.

Data Gaps

Definition of Data Gap: A data gap is defined by 40 CFR 312.10 as "a lack of or inability to obtain information required by the standards and practices" of preparation of this document "despite good faith efforts by the environmental professional" or others to gather such information.

No data gaps were encountered in completion of this inquiry.

Connecticut Property Transfer Act

This property was evaluated regarding compliance with the Connecticut Property Transfer Statute (Section 22a-134). This statute pertains to certain property and business transactions involving hazardous waste generators greater than 100 kilograms (220 pounds) in any one month (establishment).

"Establishment" meant any real property at which or any business operation from which (A) on or after November 19, 1980, there was generated, except as the result of remediation of polluted soil, groundwater or sediment, more than one hundred kilograms of hazardous waste in any one month; (B) hazardous waste generated at a different location was recycled, reclaimed, reused, stored, handled, treated, transported or disposed of; (C) the process of dry cleaning was conducted on or after May 1, 1967; (D) furniture stripping was conducted on or after May 1, 1967; or (E) a vehicle body repair facility was located on or after May 1, 1967.

As of October 1, 2019, "Establishment" does not include any business operation from which more than one hundred kilograms of hazardous waste was generated in any one month solely as a result of either:

(i) The one-time generation of hazardous waste in any one month, as a result of either the first time such waste was generated or such a one-time generation since the last time a Form I, Form II, Form III or Form IV was required to be submitted; or

(ii) One or more of the following:

- Remediation of polluted soil, groundwater or sediment;
- The removal or abatement of building materials or removal of materials used for maintaining or operating a building;
- The removal of unused chemicals or materials as a result of the emptying or clearing out of a building, provided such removal is supported by facts reasonably established at the time of such removal; or
- The complete cessation of a business operation provided the waste is removed not later than ninety days after such cessation and such cessation is supported by facts reasonably established at the time of such cessation (CTDEEP 2019).

The property does not appear to meet the definition of an “establishment” as defined by the Connecticut Transfer Act. Any final opinion or determination as to whether a transaction is subject to the Connecticut Transfer Act is a legal one and advice of legal counsel is recommended.

Known or Suspected Recognized Environmental Conditions (RECs) or Areas of Concern (AOCs)

Definition of a REC: A REC is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property.

Definition of an AOC: Locations or areas at a property where hazardous waste and or hazardous substances (including petroleum products) have been or may have been used, stored, treated, handled, disposed, spilled, and/or released to the environment”, as defined in CTDEEP’s *Site Characterization Guidance Document* (Dec. 2010).

This investigation has identified no RECs or AOCs in connection with the property. Although not a REC, the property and surrounding properties along Olson Drive and

properties west of the Naugatuck River are underlain with widespread polluted fill that was placed there in the 1960s by the Army Corps of Engineers following flooding from Hurricane Diane in 1955.

Vapor Encroachment Condition (VEC)

Definition of a VEC: This assessment included review of the regulatory database discussed above in relation to section 8.3 of the ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. If soil or groundwater is contaminated with a volatile compound (that is, something that can escape from water or soil to air, such as gasoline and solvents), that contaminant can migrate through the soil and end up in the air inside of buildings, especially within basement areas. The ASTM standard named this a vapor encroachment condition (VEC). Soil vapors do not necessarily migrate along groundwater flow paths. Vapors can move up hydraulic gradients and can extend beyond a groundwater plume. Over the last few years, there have been a significant number of sites where vapor intrusion has been discovered. The state and federal environmental regulators have "reopened" numerous spill and waste sites in order to assess whether this issue needs to be assessed and/or addressed.

This assessment has revealed no VECs in connection with the property.

Controlled Recognized Environmental Conditions (CRECs)

Definition of Controlled REC: A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.

This assessment has revealed no evidence of CRECs in connection with the property.

Historic Recognized Environmental Conditions (HRECs)

Definition of Historic REC: A historical REC is an environmental condition that in the past would have been considered a recognized environmental condition, but that may or may not be considered a recognized environmental condition currently. For example, a

spill that has been remediated to the satisfaction of the appropriate regulators would be considered a historical recognized environmental condition.

This assessment has revealed no evidence of historic recognized environmental condition (HRECs) in connection with the property.

De Minimis Conditions

Definition of de minimis: As per ASTM E1527-21, conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

This assessment has revealed no evidence of *de minimis* conditions in connection with the property.

Business Environmental Risks (BERs)

Definition of a BER: A BER is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

BER includes items that are outside the scope of CERCLA liability. Other laws can also impose liability on a property owner or operator, such as the RCRA, TSCA, CWA and state and local laws. Additionally, many health and safety concerns, natural resource concerns and third-party liability would be considered BERs, as they are not covered by CERCLA and are not required to be discussed in the Phase I. The common non-scope BER issues referred to in the ASTM definition include:

- Asbestos-Containing Building Materials (ACBMs)
- Radon
- Lead-Based Paint
- Lead in Drinking Water
- Wetlands
- Health & Safety
- Endangered Species
- Indoor Air Quality
- Mold

During the assessment, no potential BERs were identified, including the potential for ACBMs and lead-based paint.

CONCLUSIONS

As discussed herein, this investigation has identified no RECs or AOCs in connection with the property. In addition, no evidence of VECs, CRECs, HRECs or *de minimis* conditions are potentially associated with the property.

This report is intended to constitute “all appropriate inquiry” (AAI) into the previous ownership and uses of the property in general conformance with good commercial and customary practices as defined by the Comprehensive Environmental Response Compensation and Liability Act as defined in 42 USC § 9601.

PAYNE has followed the guidelines described in CTDEEP’s “Site Characteristic Guidance Document (revised 12/2010) and in ASTM E1527-21 to identify RECs at the property in a manner consistent with standard practice in the industry. However, as indicated in the ASTM standard, “No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a property, and the practice recognizes reasonable limits of time and cost.”

PAYNE’s findings are summarized in the Phase I Site Assessment Report (attached herein). Please feel free to contact the undersigned should you have any questions on the above.

Sincerely,
PAYNE ENVIRONMENTAL, LLC

I. INTRODUCTION

1.1 Purpose

This Phase I Environmental Site Assessment (ESA) was performed in general conformance with the scope and limitations of the designation ASTM E1527-21 “*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*”. The purpose of the assessment was to determine whether there is visible or recorded evidence of a release, or threat of a release, of hazardous or regulated substances, or petroleum products on the property or on any nearby properties where such a release, or threat of a release, could pose a risk of environmental impairment to the property; and to evaluate the potential presence of Recognized Environmental Conditions (RECs) in connection with the subject property. By doing so, the property owner intends to establish all appropriate inquiry into the presence of “recognized environmental conditions” on the property consistent with good commercial and customary practices as defined in the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) in 42 USC § 9601.

This report is intended to constitute “all appropriate inquiry” into the previous ownership and uses of the property in general conformance with good commercial and customary practices as defined by the Comprehensive Environmental Response Compensation and Liability Act as defined in 42 USC § 9601. In addition, PAYNE made all attempts to determine if the property meets the definition of an “establishment” as defined in the Connecticut General Statutes (CGS) Section 22a-134, et seq. as amended.

1.2 Site Identification

The ±8.56-acre property is comprised of two (2) vacant parcels located along Olson Drive in the City of Ansonia, Connecticut. The parcels are divided centrally by High Street, creating a south parcel known as 31-105 Olson drive and a north parcel known as 106-165 Olson Drive.

1.3 Scope of Services

In accordance with our proposal, Payne Environmental, LLC (PAYNE) completed a Phase I ESA for the property known as 31-1105 & 106-165 Olson Drive in Ansonia, Connecticut (the property).

The scope of work for PAYNE's Phase I ESA is in general conformance with standard and routinely accepted practices of the environmental profession and ASTM Designation E1527-21 as well as in general conformance with the scope of the Connecticut Department of Energy and Environmental Protection (CTDEEP) *Site Characterization Guidance Document*. The following work items were performed:

- The property history was reviewed to determine past use of the subject site dating back to at least 1940 or first documented development, whichever is earlier.
- Current and past uses were evaluated to ascertain the likelihood for deposition of hazardous or regulated substances or petroleum products on the property. Aerial photographs, Sanborn™ Fire Insurance Maps, and City Directories, where reasonably ascertainable, were reviewed to verify prior uses of the property.
- A search was performed of State and Federal government records and databases relative to regulated facilities or other known environmental violations on the property or within the approximate minimum search distance as defined in ASTM E1527-21. Reasonably ascertainable county and municipal records and any previous environmental reports supplied by the client or obtained by PAYNE also were reviewed.
- Reasonably ascertainable published soil, geologic, hydrogeologic, and topographic data of the subject property and surrounding area was reviewed.
- The property was visited and a visual inspection of the land was conducted to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), historic recognized environmental conditions (HRECs), de minimis conditions and business environmental risks (BERs). The property was inspected for surface indications of environmental liabilities associated with on-site storage/disposal systems, petroleum product tanks, septic systems, improperly managed refuse and debris, stained surface areas, stressed vegetation, chemical storage areas, odors, drums, drains, sumps etc. In addition, the property was inspected for transformers, substations, or other electrical equipment and for the current and past presence of USTs and ASTs, including sizes, ages, contents, and condition. General features of the property and surrounding land use, including the number, size and age of structures, locations of roads, and sources of potable water and sewage disposal were noted.

- Previous environmental investigations prepared for the property were reviewed.
- Interviews were conducted with state and town employees, property owner, tenants, and other persons familiar with the property use and history, if provided.
- The information and data collected were reviewed, interpreted and used in the formulation of conclusions regarding the potential presence and impact of RECs, CRECs, HRECs and/or areas of environmental concern (AOCs).

1.4 Non-Scope Considerations

The ASTM E1527-21 Standard includes the following list of “additional issues” that are non-scope considerations outside of the scope of the ASTM E1527-21 Practice: Asbestos-Containing Materials, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Resources, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality and High Voltage Powerlines. Limited testing was undertaken of building materials for asbestos.

1.5 Significant Assumptions

The information gathered during this assessment was information that was “practically reviewable”. This is, by definition, information that is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data. The form of the information is such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the property or a geographic area in which the property is located are not generally practically reviewable. Most databases of public records are practically reviewable if they can be obtained from the source agency by the county, city, zip code, or other geographic area of the facilities listed in the record system. Records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable. Listings in publicly available records, which do not have adequate address information to be located geographically, are not generally considered practically reviewable. For large databases with numerous records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not practically reviewable unless they can be obtained from the source agency in the smaller geographic area of zip codes.

Even when information is provided by zip code for some large databases, it is common for an unmanageable number of sites to be identified within a given zip code. In these cases, it is not necessary to review the impact of all of the sites that are likely to be listed in any given zip code because that information would not be practically reviewable. In other words, when so much data is generated that it cannot be feasibly reviewed for its impact on the property, it is not practically reviewable.

The information provided herein is that which is publicly available. Information that is publicly available means that the source of the information allows access to the information by anyone upon request at a reasonable time and cost. Information that is obtainable within reasonable time and cost constraints means that the information will be provided by the source within 5 calendar days of receiving a written, telephone, or in-person request at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 5 days of request.

1.6 Limitations

PAYNE performed the Phase I Environmental Site Assessment portion of this investigation in general conformance with the scope and limitations of ASTM Practice E1527-21 as well as in general conformance with the scope of the CTDEEP *Site Characterization Guidance Document*.

Uncertainty is not eliminated. No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.

The assessment is not exhaustive. All appropriate inquiry does not mean an exhaustive assessment of a clean property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. There is a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information.

The level of inquiry is variable. Not every property will warrant the same level of assessment. Consistent with good commercial or customary practices, the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.

The information provided herein is that information which is reasonably ascertainable from standard sources. This means that the availability of record information varies from information source to information source, including governmental jurisdictions. Neither the user nor the environmental professional is obligated to identify, obtain, or review every possible record that might exist with respect to a property. Instead, this assessment identifies record information that can be reviewed from standard sources and the user or environmental professional is required to review only information that is reasonably ascertainable from those standard sources. Information used for the following Environmental Site Assessment is information that: (1) is reasonably ascertainable, (2) is publicly available, (3) is obtainable from its source within reasonable time and cost constraints, and (4) is practically reviewable as defined above.

This evaluation has been prepared on behalf of and for the exclusive use of the Savings Bank of Danbury and Olson Park Enterprises, LLC for use in an environmental investigation of the property. The conclusions provided by PAYNE are based solely on the scope of the work conducted and the sources of information referenced in this report.

PAYNE performed a limited visual survey at the property. No air monitoring was performed. This report does not present any conclusions with respect to asbestos or lead-based paint.

No attempt has been made to audit the facility or operations conducted historically at the property with respect to regulatory compliance.

This work has been undertaken in accordance with generally accepted consulting practices. No other warranty, express or implied, is made. ***In no event may a third party rely on the evaluations, conclusions and professional opinions present in the Phase I ESA report without first obtaining the expressed written consent of PAYNE. PAYNE shall bear no liability for any unauthorized use of the information contained in this report.***

This report reflects site conditions observed and described by records available to PAYNE as of the date of report preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which

could alter the findings and/or recommendations of the report. Accordingly, the client and any other party to whom the report is provided recognize and agree that PAYNE shall bear no liability for deviations from observed conditions or available records after the time of report preparation.

1.7 User Reliance

An environmental professional is not required to verify independently the information provided by any source but may rely on information provided unless the environmental professional has actual knowledge that certain information is incorrect or unless it is obvious that certain information is incorrect based on other information obtained in the Phase I Environmental Site Assessment process or otherwise actually known to the environmental professional.

1.8 Previous Environmental Investigations

Multiple environmental investigations were identified for the property and are available for review under separate cover. PAYNE was involved in overseeing building demolition at each of the parcels from 2013 (south parcel) through 2016 (north parcel).

A Phase III Environmental Site Assessment Report was prepared for the south parcel in November 2012. A Phase III Environmental Site Assessment & Soil Management Plan Report was prepared for the north parcel in February 2016. These reports address the handling of polluted fill and are provided in Attachment E.

II. SITE DESCRIPTION

2.1 Location and Legal Description

The ±8.56-acre property is comprised of two (2) vacant parcels located along Olson Drive in the City of Ansonia, Connecticut. The parcels are divided centrally by High Street, creating a south parcel known as 31-105 Olson drive and a north parcel known as 106-165 Olson Drive. The subject property was formerly accessed by driveways leading from Olson Drive (eastern property boundary).

According to the City of Ansonia Connecticut Geographic Information System (GIS) & Real Property Information website, the subject property consists of a single parcel of land that is designated by the county as Map ID 031/05&6/000.

The property layout is shown on Figure 2 and pertinent photographs are provided in Attachment B.

2.2 Site and Vicinity General Characteristics

The subject property is located in a commercial and residential area within the City of Ansonia (Zone B – residential district). The subject property is bordered to the north by High Street, beyond which is vacant grassy land. The subject property is bordered to the east and southeast by Olson Drive, beyond which is the Naugatuck River. The subject property is bordered to the south by the intersection of Olson Drive and Lester Street/Pershing Drive, beyond which is a residential property. The subject property is bordered to the southwest by Lester Street, beyond which are residential properties. The subject property is bordered to the west by residential and commercial properties located along Lester Street. Commercial uses included a church and a Salvation Army building.

The above is determined in conjunction with New Haven Municipal records. Site figures are provided in Attachment A; copies of local file information are provided in Attachment C.

2.3 Description of Property Improvements

The ±8.56-acre property is comprised of two (2) vacant parcels located along Olson Drive in the City of Ansonia, Connecticut. It is currently undeveloped.

2.4 Site Utilities

According to site observations and available records, public and private utilities are available in the general area of the property. The property is served by all municipal and private utilities (water, sewer, gas, electric, communications).

III. PHYSICAL SETTING

3.1 Topography

The United States Geological Survey (USGS) 7.5-minute topographic maps of the Ansonia, Connecticut quadrangle indicates that the subject property elevation ranges from approximately 30 to 50 feet above mean sea level (USGS, 2018). Based on a review of these technical resources and PAYNE's site visit, the subject property appears to be generally flat with a slight downward slope to the east toward the Naugatuck River, with the exception of the southernmost portion. The land slopes downward to the north, steeply in places, from the intersection of Lester Street and Olson Drive toward the remainder of the property.

3.2 Geologic Information

Site-specific geologic information was not identified during the course of this assessment. According to the United States Department of Agriculture (USDA) Web Soil Survey, the majority of the subject property is classified as Urban Land with a small portion in the southwestern corner of the subject property classified as Agawam-Urban land complex, 0 to 8 percent slopes. Areas where soils have been heavily altered so that physical properties cannot be observed or classified characterize Urban Land. Urban Land is generally comprised of indeterminate fill materials and is characterized by variable infiltration and runoff rates. The Agawam soils are classified as coarse-loamy eolian deposits. Soils in this area generally are classified as urban land. This map unit consists of areas where urban structures cover more than 85 percent of the surface and the map unit is predominantly artificial fill and Udorthents, which are well drained to excessively drained soils mainly near urban areas.

Based on environmental investigations conducted on the south abutter (Riverside Apartments Southside), that property is overlain with two (2) distinct fill layers. The upper layer, generally observed to range in 2-12 feet in thickness, consists of a light-medium brown sandy fill layer with varying percentages of silt and gravel. This upper fill layer is underlain with a darker sandy fill material, consisting of ash, coal, brick, glass, asphalt, plastic and concrete. The thickness of this fill layer ranges from 2-8 feet. Natural brown fine-to-coarse sand with cobbles and gravel are encountered below the fill layers, at depths typically ranging from 6-20 feet below ground surface.

The property is located within the Iapetus, Connecticut Valley Synclinorium. The subsurface geology at the subject property is reported to be gray to spotted,

medium to coarse grained, foliated gneiss.

3.3 Groundwater and Surface Water Information

Groundwater in the general vicinity of the subject property is classified by CTDEEP as GA groundwater. The GA classification is defined by CTDEEP as groundwater within the area of private water supply wells or an area with the potential to provide water to public or private supply wells. The CTDEEP presumes that groundwater in a GA area is, at a minimum, suitable for drinking or other domestic uses without treatment.

The groundwater flow direction based on surface topography and monitoring well data, is inferred to be generally east/southeast towards the Naugatuck River, which is located within 100 feet of the property to the east. Depth to groundwater at the property is expected to be approximately 20 feet below ground surface, based on environmental investigations conducted on the south abutter.

The property is located in the Naugatuck River Sub Regional Basin of the Naugatuck Complex, which is tributary to the Housatonic River. The nearest natural surface water body is the water body is the Naugatuck River, essentially abutting the property easterly (Figure 1).

According to the CTDEEP, the surface water quality of the Naugatuck River classified as B. Class B surface waters are not potential drinking water supplies; however, designated uses include fish and wildlife habitat, recreational uses, agricultural and industrial supply, and other legitimate uses including navigation.

3.4 Wetlands and Flood Zone Mapping

The property lies with flood zone X(areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than one foot or within drainage areas less than one square mile; and areas protected by levees from 1% annual chance flood), as depicted on Flood Insurance Rate Maps No. 09009C0402J & 09009C0404J, with an effective date of October 16, 2013.

Based on site observations and survey of record mapping, there are no inland wetlands on the subject property.

3.5 Radon

According to the USEPA Map of Radon Zones for Connecticut, which is available on-line at <http://www.epa.gov/radon/states/connecticut.html>, the property is located in a county with a medium-high radon propensity (greater than <4 - 10 picocuries per liter).

3.6 Public and Private Water Supply

The DEEP's Connecticut Environmental Conditions Online (DEEP, 2017) and the Atlas of Public Water Supply Sources and Drainage Basins of Connecticut (CTDEP, 1982) shows no public water-supply wells or aquifer protection areas within a one-half mile radius of the property. Although a formal potable well survey was not conducted, there were no private or public wells identified within a 0.5-mile radius of the property.

3.7 Endangered Species and Ecological Receptors

Natural Diversity Data Base mapping available from Connecticut Environmental Conditions Online indicates no threatened or endangered species present at the property (DEEP, December 2022).

Land use at the property and surrounding the property is primarily residential and commercial. No ecological receptors were apparent at or adjacent to the property. Threatened and/or endangered species were identified in and adjacent to the Naugatuck River, located east of the property.

IV. SITE HISTORY

4.1 General

The usage history of the property has been reconstructed from information available at the Municipal Fire Department, Department of Development Services, Engineering Department, Public Works and Zoning Department, Clerk's Office, Assessor's Office, Department of Health & Human Services, Ansonia Public Library, reviews of topographic maps, street directories, land title information, and Sanborn™ Fire Insurance Maps.

Historical research indicates that the subject property was developed in at least the mid-1880s. The 1884 Sanborn map depicts Jersey Street to bisect the subject property in a north to south direction. Properties along Jersey Street between the 1880s and 1950 consisted of a mixture of residential and commercial/industrial buildings. Commercial/industrial uses included but are not limited to: M. Olderman & Son Metal Refinery (southeastern boundary, 1900), New Systems Laundry (southeastern boundary, 1911 and 1924), "junk storage" (eastern boundary, 1924). Additional commercial uses included halls, restaurants, grocers and stores.

Flooding from Hurricane Diane in 1955 caused significant damage to the subject property area. A city redevelopment plan was put in place and the subject property and the tract across High Street to the north were purchased in 1961 for the construction of residential apartment buildings. During the 1960s, the subject property was re-developed with seven three-story residential apartment buildings, a mixed-use apartment/office building and a community center building. The subject property remained in this configuration through 2008. In 2009, two of the apartment buildings on the southern portion of the property were demolished and in 2014 the remainder of the apartment buildings and the apartment/office building were demolished. The community center on the southern portion of the property was demolished between 2016 and 2017 at which point the subject property is depicted in its current configuration. Based on the length of time since the metal refinery, laundry and junk storage areas were present on-site and the location of these former uses in the vicinity of the former apartment buildings which would have resulted in earth working activities for re-development and demolition, these historical subject property uses are not considered RECs, in PAYNE's opinion.

The property was purchased from the City of Ansonia by Primrose Companies Realty, LLC on August 18, 2022.

Local file information is provided in Attachment C.

4.2 Sanborn Fire Insurance Maps

Sanborn maps were reviewed at the State of Connecticut Library. Sanborn maps were reviewed for the years 1884, 1890, 1900, 1906, 1911, 1924, and 1963.

1884 Sanborn: The site appears to consist of several structures labeled dwellings grocery, saloon, tailor and “gas engine job work on carriages”. High Street appears to run from the west and then branch northerly. Jersey Street is visible on the eastern portion of the site, which does not exist presently.

1890 Sanborn: The site area appears similar to the 1884 Sanborn mapping.

1900 Sanborn: The site area appears to consist of dwellings, stables, and stores. The western street appears to be labeled Jersey Street or Riverside Avenue. A

1906 Sanborn: The site area appears similar to the 1900 Sanborn.

1911 Sanborn: The site area appears similar to the 1906 Sanborn.

1924 Sanborn: The site appears to consist of structures labeled dwelling, flat, or store.

1963 Sanborn: Looks similar to today; four (4) residential buildings are visible.

4.3 City Directories

Telephone directories were available for the period 1961 until 2010. The following was observed:

YEAR	LISTING
1961-1962	No listing for Olson Drive
1963	Five (5) vacant listings
1964-2010	Individual residential listings

4.4 Title of Ownership

The property was purchased from the City of Ansonia by Primrose Companies Realty, LLC on August 18, 2022 (volume 607; page 90).

4.5 Aerial Photographs

Aerial photographs were available for review at the time of this investigation for the years noted below:

2018: The property now appears to be vacant, undeveloped property. The surrounding areas are similar to older aerials.

2014: The southern portion of the property is now vacant and undeveloped. The northern portion of the property and surrounding areas appear as they do today. The four residential buildings and boiler house are visible, as are the two (2) trash compactors and central playground area. Cars are visible in the parking lot. No other significant features were observed.

2012: The property and surrounding areas appear as they do today. The four residential buildings and boiler house are visible, as are the two (2) trash compactors and central playground area. Cars are visible in the parking lot. No other significant features were observed.

2006: Similar to 2012 aerial; however, the boiler house and central playground are not visible. The trash compactors are not visible in the photograph, although poor resolution in this photo may prevent seeing their appearance. No other significant features were observed.

2004: Similar to 2006 aerial; however, the trash compactors are visible and are in similar locations as today. No other significant features were observed.

1995: Similar to 2004 aerial; no significant changes observed.

1990: Similar to 2004 aerial; no significant changes observed. Surrounding areas appear to be very similar today.

1986: Similar to 2006 aerial; however, the trash compactors are visible and are in similar locations as today. Surrounding areas appear to be very similar today. No other significant features were observed.

1970: Similar to 1986 aerial; however, the trash compactors are visible and are in similar locations as today. Surrounding areas appear to be very similar today. No other significant features were observed.

1951: The property and surrounding areas are significantly different than they appear today. Property structures and Olson Drive are no longer visible. Multiple smaller structures are visible on the property, which is dissected by a street (Jersey Street). The Maple Street bridge and Bridge Street bridge are visible to the north and south, respectively. The western bank of the Naugatuck River appears to be much wider than it is today.

1934: The property appears to be very similar as the property aerial, with a few smaller structures visible on the eastern portion of the subject site.

4.6 Historical Topographic, Property and Atlas Mapping

USGS topographic maps were reviewed for the period 1889 through 2018. The property and surrounding area was depicted as urban and developed.

4.7 Historic Uses of Adjoining Properties

The historical research into properties neighboring the property has been completed. In addition, aerial photographs and telephone directories were reviewed for the property and neighboring sites which provide information about the historical uses of the adjoining sites. No discrepancies were apparent from the review of this data.

V. ENVIRONMENTAL RECORDS REVIEW

5.1 Standard Environmental Records Review

PAYNE contracted with EDR to provide an electronic database service to complete the environmental record review. The database search was used to identify properties that may be listed in the referenced Agency records, located within the ASTM-specified search radii:

Following is a summary of information provided for each of the federal and state databases. The complete environmental database report is provided in Attachment D.

Table 1: Federal and State Database Review

Database	Radius Searched (mile)	Site Listed in Database	Nearby Properties Listed Within Search Radius
Federal National Priorities Listing (NPL) Sites, Proposed NPL	1.0	No	0
NPL Liens	TP	No	0
Federal Delisted NPL Sites	1.0	No	0
Comprehensive Environmental Response Compensation and Liability Information System List (CERCLIS)	0.5	No	0
CERCLIS SEMS/Archived	0.5	No	3
Federal CERCLIS: No Further Remedial Action Planned (NFRAP) Site List	0.5	No	0
Federal RCRA CORRACTS Facilities List	1.0	No	0
Federal RCRA Non-CORRACTS TSD Facilities List	0.5	No	0
Federal RCRA Generators List			
RCRA – LQG	0.25	No	2
RCRA – SQG	0.25	No	2
RCRA-CESQG	0.25	No	1
Federal Institutional Control/Engineering Control (IC/EC) Registries	0.5	No	0
Federal Emergency Response Notification System (ERNS) List	TP	No	NR
State and Tribal Equivalent CERCLIS			

Database	Radius Searched (mile)	Site Listed in Database	Nearby Properties Listed Within Search Radius
CT SHWS	1.0	No	4
CT SDADB	0.5	No	13
State-and Tribal-Landfill and/or Solid Waste Disposal Site Lists	0.5	No	0
State-And Tribal-Leaking Storage Tanks Lists			
CT LUST	0.5	No	20
Indian LUST	0.5	No	0
State and Tribal Registered Storage Tank Lists			
FEMA UST	0.25	No	0
CT UST	0.25	No	11
CT AST	0.25	No	1
Indian UST	0.25	No	0
State and Tribal Institutional Control/Engineering Control Registries			
CT ENG CONTROLS	0.5	No	2
CT AUL	0.5	No	14
State and Tribal Voluntary Cleanup Sites			
CT VCP	0.5	No	4
Indian VCP	0.5	No	0
State and Tribal Brownfield Sites	0.5	No	15
US Brownfield Sites	0.5	No	6
RCRA NonGen/NLR	0.25	No	9
CT Property	TP	No	NR
CT Spills	TP	1	NR
FINDS	TP	No	NR
ECHO	TP	No	NR
CT Manifest	0.25	No	32
NY Manifests	0.25	No	9
EDR Hist Cleaner	1.0	No	2
EDR Hist Auto	0.125	No	4
TP – Target Property		1	
NR – Not Requested			

The target property (TP) was listed on one (1) environmental database: CT Spills. Motor vehicle accident reported on 3/19/2013 (Spill ID: 2013-012940). Small release of transmission oil. Area was sanded. Case considered closed by DEEP.

The complete environmental database report is provided in Attachment D.

5.2 Connecticut Property Transfer Act

This property was evaluated regarding compliance with the Connecticut Property Transfer Statute (Section 22a-134). This statute pertains to certain property and business transactions involving hazardous waste generators greater than 100 kilograms (220 pounds) in any one month (establishment).

“Establishment” meant any real property at which or any business operation from which (A) on or after November 19, 1980, there was generated, except as the result of remediation of polluted soil, groundwater or sediment, more than one hundred kilograms of hazardous waste in any one month; (B) hazardous waste generated at a different location was recycled, reclaimed, reused, stored, handled, treated, transported or disposed of; (C) the process of dry cleaning was conducted on or after May 1, 1967; (D) furniture stripping was conducted on or after May 1, 1967; or (E) a vehicle body repair facility was located on or after May 1, 1967.

As of October 1, 2019, "Establishment" does not include any business operation from which more than one hundred kilograms of hazardous waste was generated in any one month solely as a result of either:

(i) The one-time generation of hazardous waste in any one month, as a result of either the first time such waste was generated or such a one-time generation since the last time a Form I, Form II, Form III or Form IV was required to be submitted; or

(ii) One or more of the following:

- Remediation of polluted soil, groundwater or sediment;
- The removal or abatement of building materials or removal of materials used for maintaining or operating a building;
- The removal of unused chemicals or materials as a result of the emptying or clearing out of a building, provided such removal is supported by facts reasonably established at the time of such removal; or
- The complete cessation of a business operation provided the waste is removed not later than ninety days after such cessation and such cessation is supported by facts reasonably established at the time of such cessation (CTDEEP 2019).

The property does not appear to meet the definition of an “establishment” as defined by the Connecticut Transfer Act. Any final opinion or determination as to whether a transaction is subject to the Connecticut Transfer Act is a legal one and advice of legal counsel is recommended.

5.3 Summary of Area Review

The database report identified multiple mapped facilities located within the ASTM Designation E1527-21 search radii.

Off-site facilities which are either located hydraulically downgradient of the property, based on the inferred direction of ground water flow, have a “closed” status, are geologically separated from the subject property by a water body, or are located in a different drainage basin are not believed to have the potential to adversely impact the property and are not discussed further.

Nearby off-site properties (less than 1/8-mile) located hydraulically upgradient or crossgradient of the property, based on the inferred direction of ground water, may have the potential to impact the property and are discussed in further detail below. Properties located more than 1/8-mile upgradient or crossgradient of the property are not considered significant given the location of the property and the availability of municipal water. Impacts to the property originating from upgradient sources are not the responsibility of the property owner.

5.4 Additional Environmental Records Review

In conformance with ASTM, inquiry was made with representatives of the CTDEEP, local health department, fire department and municipal offices as described below.

A. Health Department

The Naugatuck Valley Health District was contacted regarding the property. No records were available pertaining to the property.

B. Fire Department/Fire Marshal

PAYNE corresponded with the Fire Marshal’s office on January 20, 2023 requesting to review files regarding storage tanks, chemical storage/disposal, inspections, and other information regarding known or potential environmental conditions on the subject property. No records

pertaining to USTs or chemical/petroleum storage were found associated with the property.

C. Tax Assessor's Office

PAYNE reviewed maps and field cards for the property in the Ansonia Assessor's Office. Historic field cards were not available for review. The current Assessor's property card is provided in Attachment C.

D. Engineering/Public Works

According to the Engineering Department, municipal water and sewer have been available in the area since at least the late 1800s.

E. Building Department

Records were not available for review at the time of the visit to the Department.

F. Other CTDEEP File Information

PAYNE requested information from CTDEEP file room staff utilizing the "File Request Form". The property address was not listed.

G. Other USEPA File Information

The property is not listed in any EPA databases.

H. User-Provided Information

The ASTM Standard requires disclosure in the Phase I report whether the user of the report has specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs, or whether the user has determined that the property's Title contains environmental liens or other information related to environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations, as defined by ASTM. As of this report preparation, the

user has not informed PAYNE that there are liens or other information about the environmental condition of the property in the Title. The user provided several former Phase I and II ESA and related documents which detailed previous uses of the property that may be material to identifying RECs.

The user provided information necessary to determine the possibility of recognized environmental conditions associated with the property. These tasks do not require the technical expertise of the environmental professional and are generally not performed by them. The following includes the information provided by the User of this Phase I Environmental Site Assessment.

Deed/Title Records:

Deed and Title Records were not provided to PAYNE as a part of the User Provided Information.

Environmental Liens:

The owner had no knowledge of any environmental liens placed on the subject property. No such liens were identified in a file review conducted by PAYNE in the New Haven land records.

Activity and Use Limitations:

Activity and Use Limitations (AUL's) are one indication of a past or present release of a hazardous substance or petroleum product. AUL's are an explicit recognition by a federal, tribal, state, or local regulatory agency that residual levels of hazardous substances or petroleum products may be present on a property, and that unrestricted use of the property may not be acceptable. This environmental professional reviewed agency records and IC/EC registries for the presence of AUL's on the property to determine if a recognized environmental condition is present on the subject property. No ELUR was on file with the Clerk's Office associated with the property.

Specialized Knowledge:

There is no specialized knowledge about the property as provided by the User of this Environmental Site Assessment. Therefore, no specialized knowledge was supplied to the environmental professional.

Commonly Known or Reasonably Ascertainable Records:

The User provided no Commonly Known or Reasonably Ascertainable Records, beyond those of the interviews and public records review. No information sources are known by the User except those stated herein.

Valuation Reduction for Environmental Issues:

There has been no significant reduction in the purchase price to value equation as stated by the User. Therefore, no additional information was supplied to the environmental professional. (ASTM Section 6.5)

Owner, Manager or Property Manager Information:

PAYNE conducted an interview with Mr. John Guedes of Primrose Companies, Inc. Mr. Guedes did not have any information regarding environmental concerns for the property; Mr. Guedes also completed an ASTM User Questionnaire for the property.

A copy of the questionnaire is provided in Attachment C.

VI. SITE RECONNAISSANCE

6.1 General

The objective of the site reconnaissance is to obtain information indicating the presence or likely presence of recognized environmental conditions in connection with the property. As applicable, this reconnaissance includes a physical and visual inspection of the property and structures on the property to the extent they are not obstructed by bodies of water, buildings, snow cover, impervious layers or are not able to be inspected due to other obstacles or are unavailable during the course of this inspection. The following presents data learned from the site reconnaissance.

The property was visited on February 15, 2023, for the purpose of performing surficial reconnaissance. PAYNE was unaccompanied during the property visit. During the reconnaissance, the property and portions of adjacent properties and surrounding roadways were traversed on foot or in a vehicle and inspected for signs of potential environmental impairment, recognized environmental conditions, and hazardous building materials.

No visible or olfactory evidence of contamination was observed on the property. No visible or olfactory evidence of contamination was observed in the building interior.

Site photographs are provided in Attachment B.

6.2 Methodology, Limiting Conditions and General Observations

Weather conditions on the day of the site visits were standard for that time of year (overcast, temperatures in the 40s), with no issues related to site observations.

The methodology for this assessment was to physically visit the available areas of the subject property.

6.3 Polychlorinated Biphenyls (PCBs)

PCB-containing dielectric fluid has historically been used in transformers and fluorescent light ballasts manufactured prior to 1982. In addition, PCB-containing fluid has historically been used in hydraulic equipment such as elevators and lifts.

If suspect units are present during any site activities that would require disposal, they should be properly removed in accordance with Federal, State and Local regulations.

One (1) pole-mounted transformer was observed on a utility pole located on the south side of High Street, adjacent to the south parcel. Green “No PCBs” markers could not be observed on the transformer. There was no visual evidence of staining or leaks.

6.4 Chlorofluorocarbons (CFCs)

CFCs consist of chemical compounds of chlorine, fluorine, and carbon atoms. Additionally, some CFCs also include hydrogen atoms. CFCs have been widely used over the past 60 years as refrigerants in household appliances and air conditioners, as industrial solvents, as blowing agents in manufacturing foam products, and as propellants in aerosol sprays (Moeller, 1992).

The 1977 amendments to the Clean Air Act have banned the use of CFCs as propellants in the United States since 1978. In addition, an international agreement known as the Montreal Protocol was signed by 40 nations in 1987 and designed to phase out all CFC production by the year 2000 (Godish, 1991).

The subject property consists of undeveloped grass-covered land.

6.5 Aboveground and Underground Storage Tanks

The subject property consists of undeveloped grass-covered land. There was no visual evidence of fill pipes or vent pipes that could be attributed to USTs.

6.7 Floor Drains/Sumps

The subject property consists of undeveloped grass-covered land. Two (2) stormwater catch basins were observed at the property. Each catch basin was observed to be filled with soil/grass; there was no evidence of staining or contamination in these structures.

6.8 Asbestos-Containing Material (ACM)

Building construction materials that contain asbestos are found in a variety of types and uses. Common types of ACMs used in building construction includes, but is not limited to, vinyl floor tile, linoleum flooring, mastic, ceiling tile, spray-applied acoustical/decorative ceiling materials and fireproofing, plaster, wallboard joint compound, pipe and boiler insulation, roofing and flashing, and many other materials in common use prior to 1978. ACMs also may be present in debris piles containing discarded building construction materials. Certain asbestos-containing building construction materials such as roofing, roofing tar, and adhesives were still commonly used after 1978. Materials that contain over one percent asbestos are considered ACMs and must be handled according to state and federal regulations.

The subject property consists of undeveloped grass-covered land.

6.9 Lead-Based Paint (LBP)

Many houses, apartments, and other buildings constructed prior to 1978 were painted with LBP. Based on the building age the presence of LBP cannot be precluded. Due to the construction date of the structure, the presence of lead-based paint cannot be precluded.

The subject property consists of undeveloped grass-covered land.

6.10 Regulated and Hazardous Materials Use and Storage

For the purposes of this discussion, hazardous substances are virgin product or raw materials intended to be used in some manner consistent with the reason they were manufactured (in contrast to waste materials).

The subject property consists of undeveloped grass-covered land.

6.11 Regulated and Hazardous Waste Storage and Disposal

The subject property consists of undeveloped grass-covered land.

6.12 Water and Wastewater

The subject property consists of undeveloped grass-covered land.

6.13 Wetlands and Environmentally Sensitive Areas

Wetlands are diverse ecosystems characterized by hydria soils, hydrophilic vegetation, and hydrology. Vegetation or other conditions indicative of jurisdictional wetlands are regulated under Section 404 of the Clean Water Act.

No mapped inland wetlands have been identified on or proximate to the property.

6.14 Odors

There were no suspected or unidentified odors detected at the property during the visit.

6.15 Pools of Liquid or Pits, Ponds or Lagoons

No pools of liquid, pits, ponds or lagoons were visible on the property during the visit.

6.16 Stains or Corrosion

No corrosion or staining was observed at the property.

6.17 Stained Pavement or Concrete

The subject property consists of undeveloped grass-covered land. No concrete or pavement was observed on the property.

6.18 Stressed Vegetation

Distressed vegetation can be an indicator of problematic near-surface conditions. Problematic near-surface conditions can be caused by environmental contaminants adversely impacting the quality of plant growth.

No evidence of stressed vegetation was observed on the property.

6.19 On-Site Wells

There are no known on-site supply wells on the property. This includes natural gas, water, oil. No groundwater monitoring wells were observed onsite.

6.20 Air Pollution

No air pollution sources were observed at the property.

6.21 Mold/Microbial Growth

The subject property consists of undeveloped grass-covered land.

6.22 Radon

The subject property consists of undeveloped grass-covered land. According to the USEPA Map of Radon Zones for Connecticut, Ansonia, CT is located in New Haven County, which has an EPA assigned Radon Zone of 1. A radon zone of 1 predicts an average indoor radon screening level greater than 4 pCi/L, which is above the recommended levels assigned by the EPA.

6.23 Vapor Encroachment Conditions

This assessment included review of the regulatory database discussed above in relation to section 8.3 of the ASTM E2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. If soil or groundwater is contaminated with a volatile compound (that is, something that can escape from water or soil to air, such as gasoline and solvents), that contaminant can migrate through the soil and end up in the air inside of buildings, especially within basement areas. The ASTM standard named this a VEC. Soil vapors do not necessarily migrate along groundwater flow paths. Vapors can move up hydraulic gradients and can extend beyond a groundwater plume. Over the last few years, there have been a significant number of sites where vapor intrusion has been discovered. The state and federal environmental regulators have "reopened" numerous spill and waste sites in order to assess whether this issue needs to be assessed and/or addressed.

Based on review of the EDR database for nearby properties of potential concern (service stations, dry cleaners, and chemical manufacturing facilities), particularly

properties on the west side of the Naugatuck river, and past investigations, an onsite or offsite source does not exist.

VII. INTERVIEWS

The objective of interviews with regulatory officials and other persons is to obtain information indicating recognized environmental conditions in connection with the property. Many individuals were interviewed in connection with this ESA and contributed, therefore, to its contents.

The answers given to the questions discussed during the interview process relative to the subject property from the individuals identified as having knowledge of the property are presented within the body of this report.

7.1 Interview with Owner/Key Site Manager

PAYNE conducted an interview with Mr. John Guedes of Primrose Companies, Inc. Mr. Guedes did not have any information regarding environmental concerns for the property; Mr. Guedes also completed an ASTM User Questionnaire for the property.

7.2 Interview with Site Occupants

The subject property consists of undeveloped grass-covered land.

7.3 Interviews with Local and State Agencies

All municipal offices were contacted or visited during this investigation, including the local fire marshal, building department, town clerk, assessor, engineering, sewer, public works and land use department; interviews with relevant staff are noted in Section 5.2. No state agencies were interviewed.

VIII. FINDINGS

This Phase I ESA has been performed in conformance with the scope and limitations of ASTM Designation E1527-21 as well as in general conformance with the scope of the CTDEEP Site Characterization Guidance Document. Any exceptions to, or deletions from, this report is described in Section I.

8.1 Recognized Environmental Conditions/Areas of Environmental Concern

This investigation has identified no RECs or AOCs in connection with the property. Although not a REC, the property and surrounding properties along Olson Drive and properties west of the Naugatuck River are underlain with widespread polluted fill that was placed there in the 1960s by the Army Corps of Engineers following flooding from Hurricane Diane in 1955.

8.2 Controlled Recognized Environmental Conditions (CRECs)

This assessment has revealed no evidence of controlled recognized environmental condition (CRECs) in connection with the property.

8.3 Historic Recognized Environmental Conditions (HRECs)

This assessment has revealed no evidence of historic recognized environmental condition (HRECs) in connection with the property.

8.4 De Minimis Conditions

This assessment has revealed no evidence of *de minimis* conditions in connection with the property.

8.5 Business Environmental Risks (BERs)

No BERs were identified for the property.

8.6 Connecticut Property Transfer Act

This property was evaluated regarding compliance with the Connecticut Property Transfer Statute (Section 22a-134). This statute pertains to certain property and business transactions involving hazardous waste generators greater than 100 kilograms (220 pounds) in any one month (establishment).

On October 1, 2019, changes to the Connecticut Property Transfer Law became effective through Public Act 19-75. The two major changes are:

1. The Public Act compels DEEP's Commissioner to make an audit or no audit decision within one year of submittal of a LEP verification; and,
2. The Public Act contains a new exclusion from the definition of "establishment:

"Establishment" does not include any business operation from which more than one hundred kilograms of hazardous waste was generated in any one month solely as a result of either:

(i) The one-time generation of hazardous waste in any one month, as a result of either the first time such waste was generated or such a one-time generation since the last time a Form I, Form II, Form III or Form IV was required to be submitted; or

(ii) One or more of the following:

(I) Remediation of polluted soil, groundwater or sediment;

(II) The removal or abatement of building materials or removal of materials used for maintaining or operating a building;

(III) The removal of unused chemicals or materials as a result of the emptying or clearing out of a building, provided such removal is supported by facts reasonably established at the time of such removal; or

(IV) The complete cessation of a business operation, provided the waste is removed not later than ninety days after such cessation and such cessation is supported by facts reasonably established at the time of such cessation (CTDEEP 2019).

The property does not appear to meet the definition of an "establishment" as defined by the Connecticut Transfer Act. Any final opinion or determination as to whether a transaction is subject to the Connecticut Transfer Act is a legal one and advice of legal counsel is recommended.

Any final opinion or determination as to whether a transaction is subject to the Connecticut Transfer Act is a legal one and advice of legal counsel is recommended.

IX. OPINION & CONCLUSIONS

Payne Environmental LLC has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 as well as in general conformance with the scope of the CTDEEP Site Characterization Guidance Document. The following includes the opinion of the Environmental Professional as to whether the findings mentioned above constitute recognized environmental conditions with respect to this parcel of real estate.

As discussed in Section 8.1 and herein, this investigation has not identified any RECs/AOCs in connection with the property. Although not a REC, the property and surrounding properties along Olson Drive and properties west of the Naugatuck River are underlain with widespread polluted fill that was placed there in the 1960s by the Army Corps of Engineers following flooding from Hurricane Diane in 1955. If site soils are to be disturbed as part of redevelopment, a Soil Management Plan should be developed and implemented to address the handling of fill material if encountered.

X. DEVIATIONS

The environmental professional conducting this Phase I Environmental Site Assessment has completed the assignment in compliance with ASTM Practice E1527-21. No deviations to this practice, such as client-imposed constraints or limiting conditions (access, weather conditions, obstruction, data gaps, etc.) were encountered.

XI. ADDITIONAL SERVICES

No additional services were requested during this Phase I Environmental Site Assessment, which might be considered to be outside the scope of the standard Phase I Environmental Site Assessment pursuant to ASTM Practice E1527-21. No additional services were contingent on the outcome of this Phase I Environmental Site Assessment.

XIII. SIGNATURE OF THE ENVIRONMENTAL PROFESSIONAL

As required in 40 CFR 312.21(d), this section includes statements made by the environmental professional conducting this assessment.

"I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312."

"I declare that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property."

"I have developed and preformed the 'all appropriate inquiry' in conformance with the standards, limitations, and practices set forth in 40 CFR Part 312."

In addition, ASTM E1527-21 requires the credentials of the environmental professional involved in conducting the Phase I ESA. Therefore, a professional resume is included in Attachment F of this report. This report incorporates the consultant's best professional judgment in conductance of this Phase I ESA.

SURVEYOR'S NOTES:

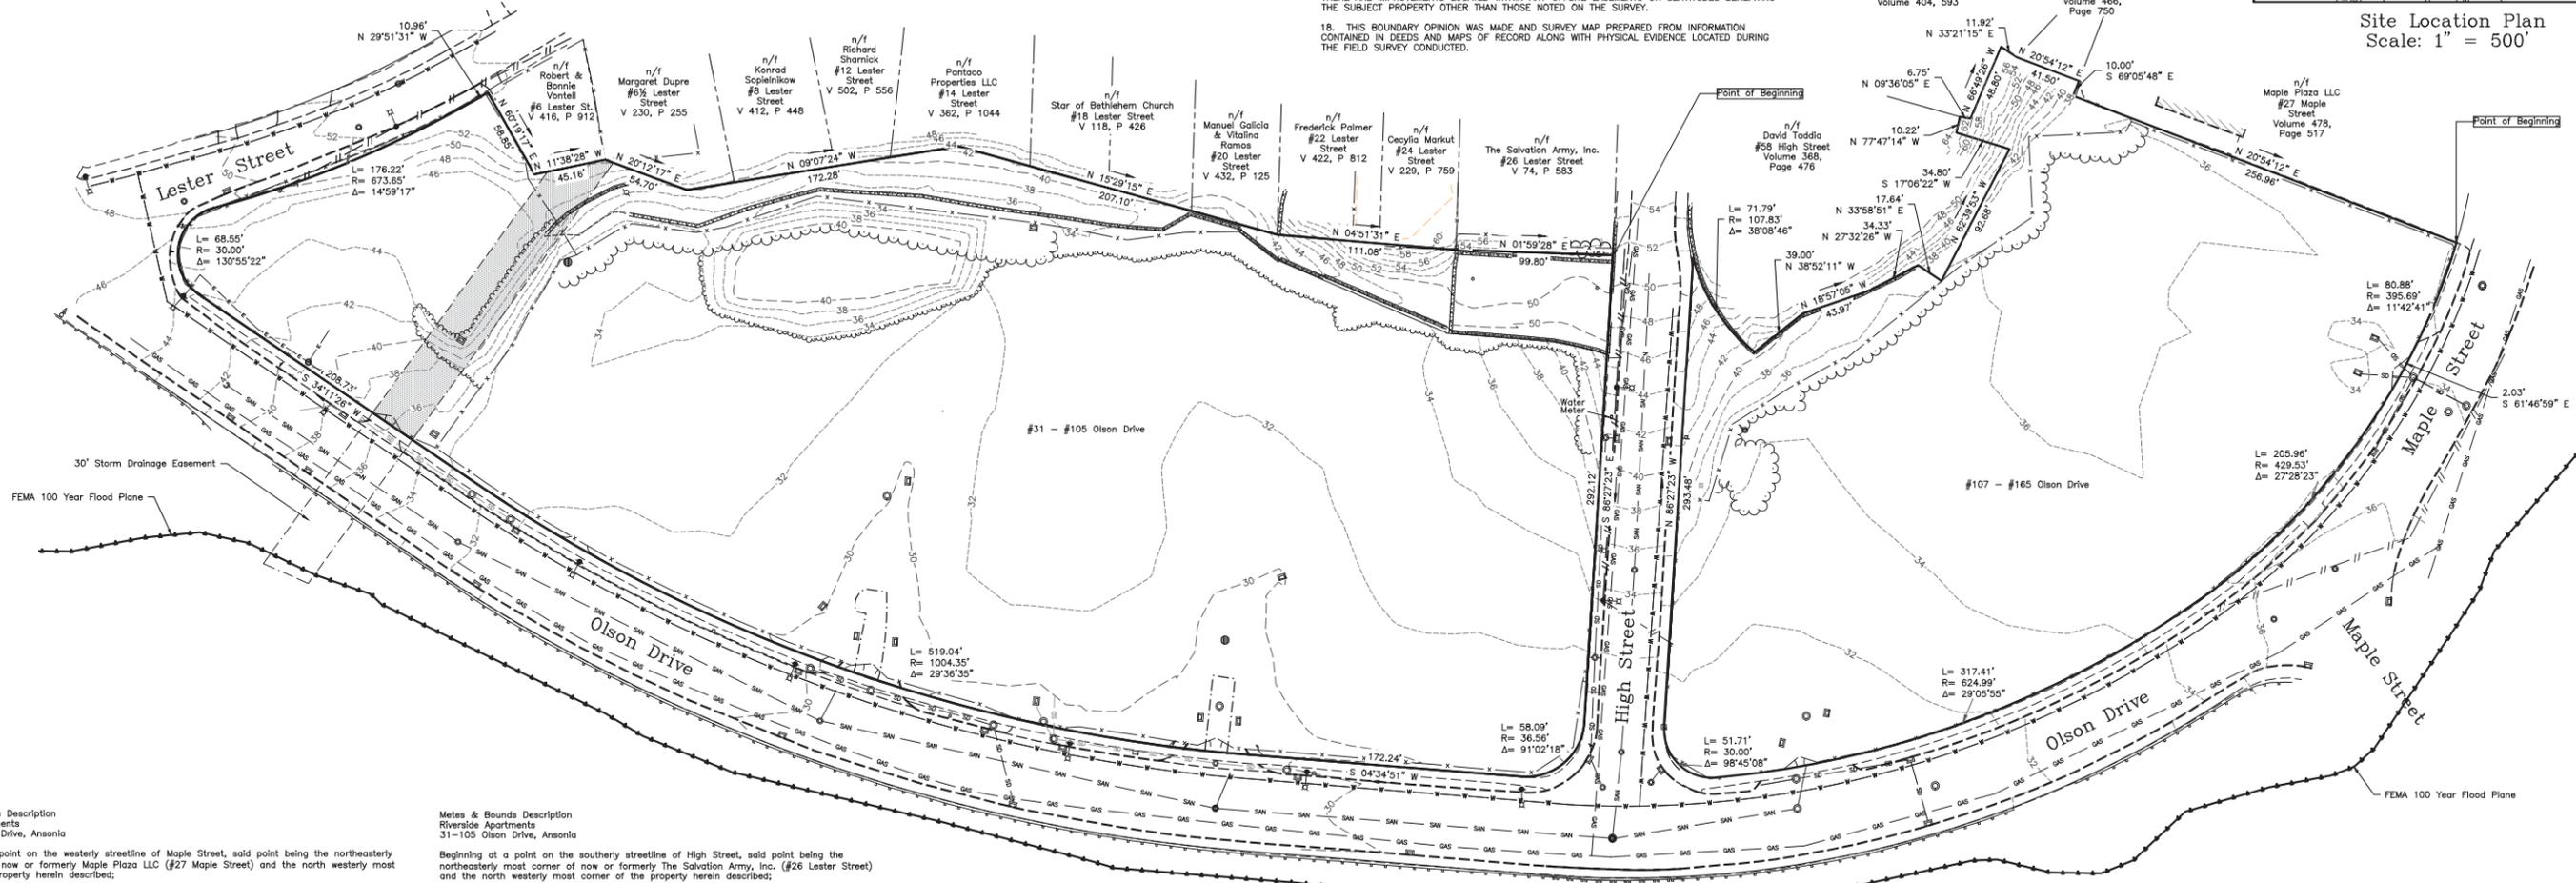

- 1. THIS SURVEY AND MAP HAVE BEEN PREPARED IN CONFORMANCE WITH REGULATIONS AS DEFINED IN THE STANDARDS FOR SURVEYS AND MAPS IN THE STATE OF CONNECTICUT...
2. THE TYPE OF SURVEY PERFORMED IS A PROPERTY SURVEY AND IS INTENDED TO DEPICT BOUNDARIES, EASEMENTS, RIGHTS AND PRINCIPAL IMPROVEMENTS (ONLY) ON AND ADJACENT TO THE PROPERTY...
3. THE BOUNDARY DETERMINATION CATEGORY IS A RESURVEY OF MAP REFERENCES 10.a AND 10.b.
4. THIS SURVEY CONFORMS TO A HORIZONTAL ACCURACY STANDARD OF CLASS A-2, A VERTICAL ACCURACY STANDARD OF CLASS V-2, AND A TOPOGRAPHIC ACCURACY STANDARD OF CLASS T-2.
5. BEARINGS AND COORDINATES ARE BASED UPON THE CONNECTICUT GRID SYSTEM NORTH AMERICAN DATUM OF 1983 (NAD 83). DATUM ESTABLISHED BY GPS.
6. THE PROPERTIES ARE LOCATED WITHIN A GA (MULTI-FAMILY) ZONING DISTRICT AND THE CITY CENTER ZONING DISTRICT.
7. THE AREA OF #31-#105 OLSON DRIVE IS 242,407.6± SQUARE FEET (5.56± ACRES) AND THE AREA OF #106-#165 OLSON DRIVE IS 130,279.7± SQUARE FEET (2.99± ACRES).
8. THE PROPERTIES ARE CURRENTLY OWNED BY THE HOUSING AUTHORITY OF THE CITY OF ANSONIA BY VIRTUE OF A QUIT CLAIM DEED DATED NOVEMBER 27, 1961 AND RECORDED IN VOLUME 112 AT PAGE 13 AND BY VIRTUE OF A QUIT CLAIM DEED DATED FEBRUARY 10, 1964 AND RECORDED IN VOLUME 121 AT PAGE 546 OF THE ANSONIA LAND RECORDS. THE PROPERTY IS DESIGNATED ON THE CITY OF ANSONIA ASSESSOR'S RECORDS AS PARCEL 03105&6 AND THE PROPERTY ADDRESSES ARE #31-#105 OLSON DRIVE AND #106-#165 OLSON DRIVE, ANSONIA, CONNECTICUT 06401.

- 9. THE PROPERTIES LIE WITHIN FLOOD ZONE X (AREAS OF 0.2% ANNUAL CHANCE FLOOD; AREAS OF 1% ANNUAL CHANCE FLOOD WITH AVERAGE DEPTHS OF LESS THAN 1 FOOT OR WITHIN DRAINAGE AREAS LESS THAN 1 SQUARE MILE, AND AREAS PROTECTED BY LEVEES FROM 1% ANNUAL CHANCE FLOOD) AS DEPICTED ON FLOOD INSURANCE RATE MAP NO. 09009C0402, PANEL 402 OF 635 WITH AN EFFECTIVE DATE OF OCT. 16, 2013, AND MAP NO. 09009C04K, PANEL 404 OF 635 WITH AN EFFECTIVE DATE OF OCT. 16, 2013.
10. REFERENCE IS MADE TO THE FOLLOWING MAP(S):
a. ALTA/ACSM LAND TITLE SURVEY, LAND OF, THE HOUSING AUTHORITY OF THE CITY OF ANSONIA, RIVERSIDE APARTMENTS, 31-105 OLSON DRIVE, ANSONIA, CONNECTICUT, DATED: 01/25/13, SCALE: 1" = 40', MAP PREPARED BY JULIANO ASSOCIATES LLC.
b. ALTA/ACSM LAND TITLE SURVEY, LAND OF, THE HOUSING AUTHORITY OF THE CITY OF ANSONIA, RIVERSIDE APARTMENTS, 106-165 OLSON DRIVE, ANSONIA, CONNECTICUT, DATED: 02/28/13, SCALE: 1" = 30', MAP PREPARED BY JULIANO ASSOCIATES LLC.
11. PROPERTY IS SUBJECT/PRIVILEGED TO:
a. TERMS, CONDITIONS, AGREEMENTS, RESTRICTIONS, COVENANTS, OBLIGATIONS, RIGHTS AND EASEMENTS AS SET FORTH IN AN AGREEMENT BY AND AMONG THE CITY OF ANSONIA, THE ANSONIA REDEVELOPMENT AGENCY, AND HOUSING AUTHORITY OF THE CITY OF ANSONIA DATED JULY 20, 1961 AND RECORDED IN VOLUME 110 AT PAGE 127 OF THE ANSONIA LAND RECORDS; AS AMENDED BY AGREEMENT DATED AUGUST 23, 1961 AND RECORDED IN VOLUME 110 AT PAGE 698 OF SAID LAND RECORDS.
b. RIGHTS OF WAY, COVENANTS, PROMISES AND AGREEMENTS AS SET FORTH IN A QUIT CLAIM DEED DATED NOVEMBER 27, 1961 AND RECORDED IN VOLUME 112 AT PAGE 13 OF THE ANSONIA LAND RECORDS.
c. COVENANTS, PROMISE AND AGREEMENTS AS SET FORTH IN A QUIT CLAIM DEED DATED FEBRUARY 10, 1964 AND RECORDED IN VOLUME 121 AT PAGE 540 OF THE ANSONIA LAND RECORDS.
d. RIGHTS OF OTHERS IN AND TO THE EXTENSION OF HIGH STREET AS ADOPTED BY THE CITY OF ANSONIA AS EVIDENCED BY A RESOLUTION DATED NOVEMBER 24, 1964 AND RECORDED IN VOLUME 124 AT PAGE 526 OF THE ANSONIA LAND RECORDS.

- e. NOTICE OF VARIANCE GRANTED BY THE CITY OF ANSONIA ZONING BOARD OF APPEALS DATED OCTOBER 4, 1996 AND RECORDED IN VOLUME 296 AT PAGE 559 OF THE ANSONIA LAND RECORDS.
f. VACANCY AGREEMENT BY AND BETWEEN HOUSING AUTHORITY OF THE CITY OF ANSONIA AND HAUGTUCK HEALTH DISTRICT DATED SEPTEMBER 12, 2012 AND SEPTEMBER 17, 2012 AND RECORDED IN VOLUME 510 AT PAGE 2 OF THE ANSONIA LAND RECORDS.
g. ANY OTHER RIGHTS, RESTRICTIONS, ENCUMBRANCES, COVENANTS, EASEMENTS, ETC. AS THE RECORD MAY APPEAR.
12. OLSON DRIVE, LESTER STREET AND HIGH STREET ARE ACCEPTED CITY HIGHWAYS. THE PROPERTY HAS DIRECT ACCESS TO SAID STREETS.
13. THE LOCATIONS OF UNDERGROUND UTILITIES/IMPROVEMENTS AS DEPICTED HEREON ARE BASED UPON ABOVE-GROUND STRUCTURES, INFORMATION AS SUPPLIED BY THE RESPECTIVE UTILITY COMPANIES AND THE ABOVE REFERENCED MAPS. LOCATIONS OF UNDERGROUND UTILITIES/STRUCTURES MAY VARY FROM LOCATIONS AS DEPICTED AND ADDITIONAL BURIED UTILITIES MAY BE ENCOUNTERED. ALL UTILITIES SHOULD BE FIELD MARKED PRIOR TO THE COMMENCEMENT OF ANY DIGGING OR EXCAVATION.
14. BASED UPON OUR VISUAL INSPECTION OF THE PROPERTY DURING THE COURSE OF THIS SURVEY THERE IS NO EVIDENCE OF CURRENT EARTH MOVING WORK. THE SURVEY WITNESSED NO STREET OR SIDEWALK CONSTRUCTION REPAIRS DURING THE COURSE OF THE FIELD WORK AND IS UNAWARE OF ANY CURRENT OR CONTEMPLATED RIGHT-OF-WAY AND/OR ROADWAY CHANGES.
15. BASED UPON OUR VISUAL INSPECTION OF THE PROPERTY DURING THE COURSE OF THIS SURVEY THERE WAS NO OBSERVED EVIDENCE OF THE SITE CURRENTLY BEING USED AS A SOLID WASTE DUMP, SWAMP OR SANITARY LANDFILL.
16. BASED UPON OUR VISUAL INSPECTION OF THE PROPERTY DURING THE COURSE OF THE SURVEY ALONG WITH RECORD MAPPING THERE ARE NO INLAND WETLANDS ON THE SUBJECT PROPERTY.
17. THE SURVEYOR FOUND NO EVIDENCE DURING THE COURSE OF THIS SURVEY NOR WITHIN THE RECORD DOCUMENTS PROVIDED BY FIRST AMERICAN TITLE INSURANCE COMPANY TO INDICATE THAT THERE ARE IMPROVEMENTS LOCATED WITHIN ANY OFFSITE EASEMENTS OR SERVITUDES BENEFITING THE SUBJECT PROPERTY OTHER THAN THOSE NOTED ON THE SURVEY.
18. THIS BOUNDARY OPINION WAS MADE AND SURVEY MAP PREPARED FROM INFORMATION CONTAINED IN DEEDS AND MAPS OF RECORD ALONG WITH PHYSICAL EVIDENCE LOCATED DURING THE FIELD SURVEY CONDUCTED.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: State of Connecticut

Survey Area Data: Version 22, Sep 12, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 8, 2020—Oct 14, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
229B	Agawam-Urban land complex, 0 to 8 percent slopes	0.1	1.2%
307	Urban land	7.8	98.8%
Totals for Area of Interest		7.9	100.0%

not necessarily identify an area subject to flooding, particularly from local drainage sources of small size. The community map repository may be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) Report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS Report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study Report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways map repository may be consulted for more information on flood insurance. For information on flood insurance, interested parties should visit the FEMA Website at <http://www.fema.gov/business/nfp/index.shtm>.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report for information on flood control structures for this jurisdiction.

Accredited Levee Notes to Users: Check with your local community to obtain more information, such as the estimated level of protection provided (which may exceed the 1-percent-annual-chance level) and Emergency Action Plan, on the levee system(s) shown as providing protection for areas on this panel. To mitigate flood risk in residual risk areas, property owners and residents are encouraged to consider flood insurance and floodproofing or other protective measures. For more information on flood insurance, interested parties should visit the FEMA Website at <http://www.fema.gov/business/nfp/index.shtm>.

The **projection** used in the preparation of this map was Connecticut State Plane Zone (FIPS zone 0600). The **horizontal datum** was NAD 83, GRS 1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov> or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, NNGS12
National Geodetic Survey
S/MC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at <http://www.ngs.noaa.gov>.

Base Map information shown on FIRM panels produced for this physical map revision was provided in digital format by the Connecticut Department of Environmental Protection. The 2007 imagery was derived from digital orthophotos produced at a scale 1:12,000. Supplemental imagery from United States Geological Survey 2008 High Resolution Orthophotography produced from 1 foot pixel cells from photography dated April 2008. The projection used in the preparation of this map was Connecticut State Plane Feet, FIPS Zone 0600. The horizontal datum used was North American Datum of 1983 (NAD 83).

The **profile baselines** depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the **profile baseline**, in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables for multiple streams in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

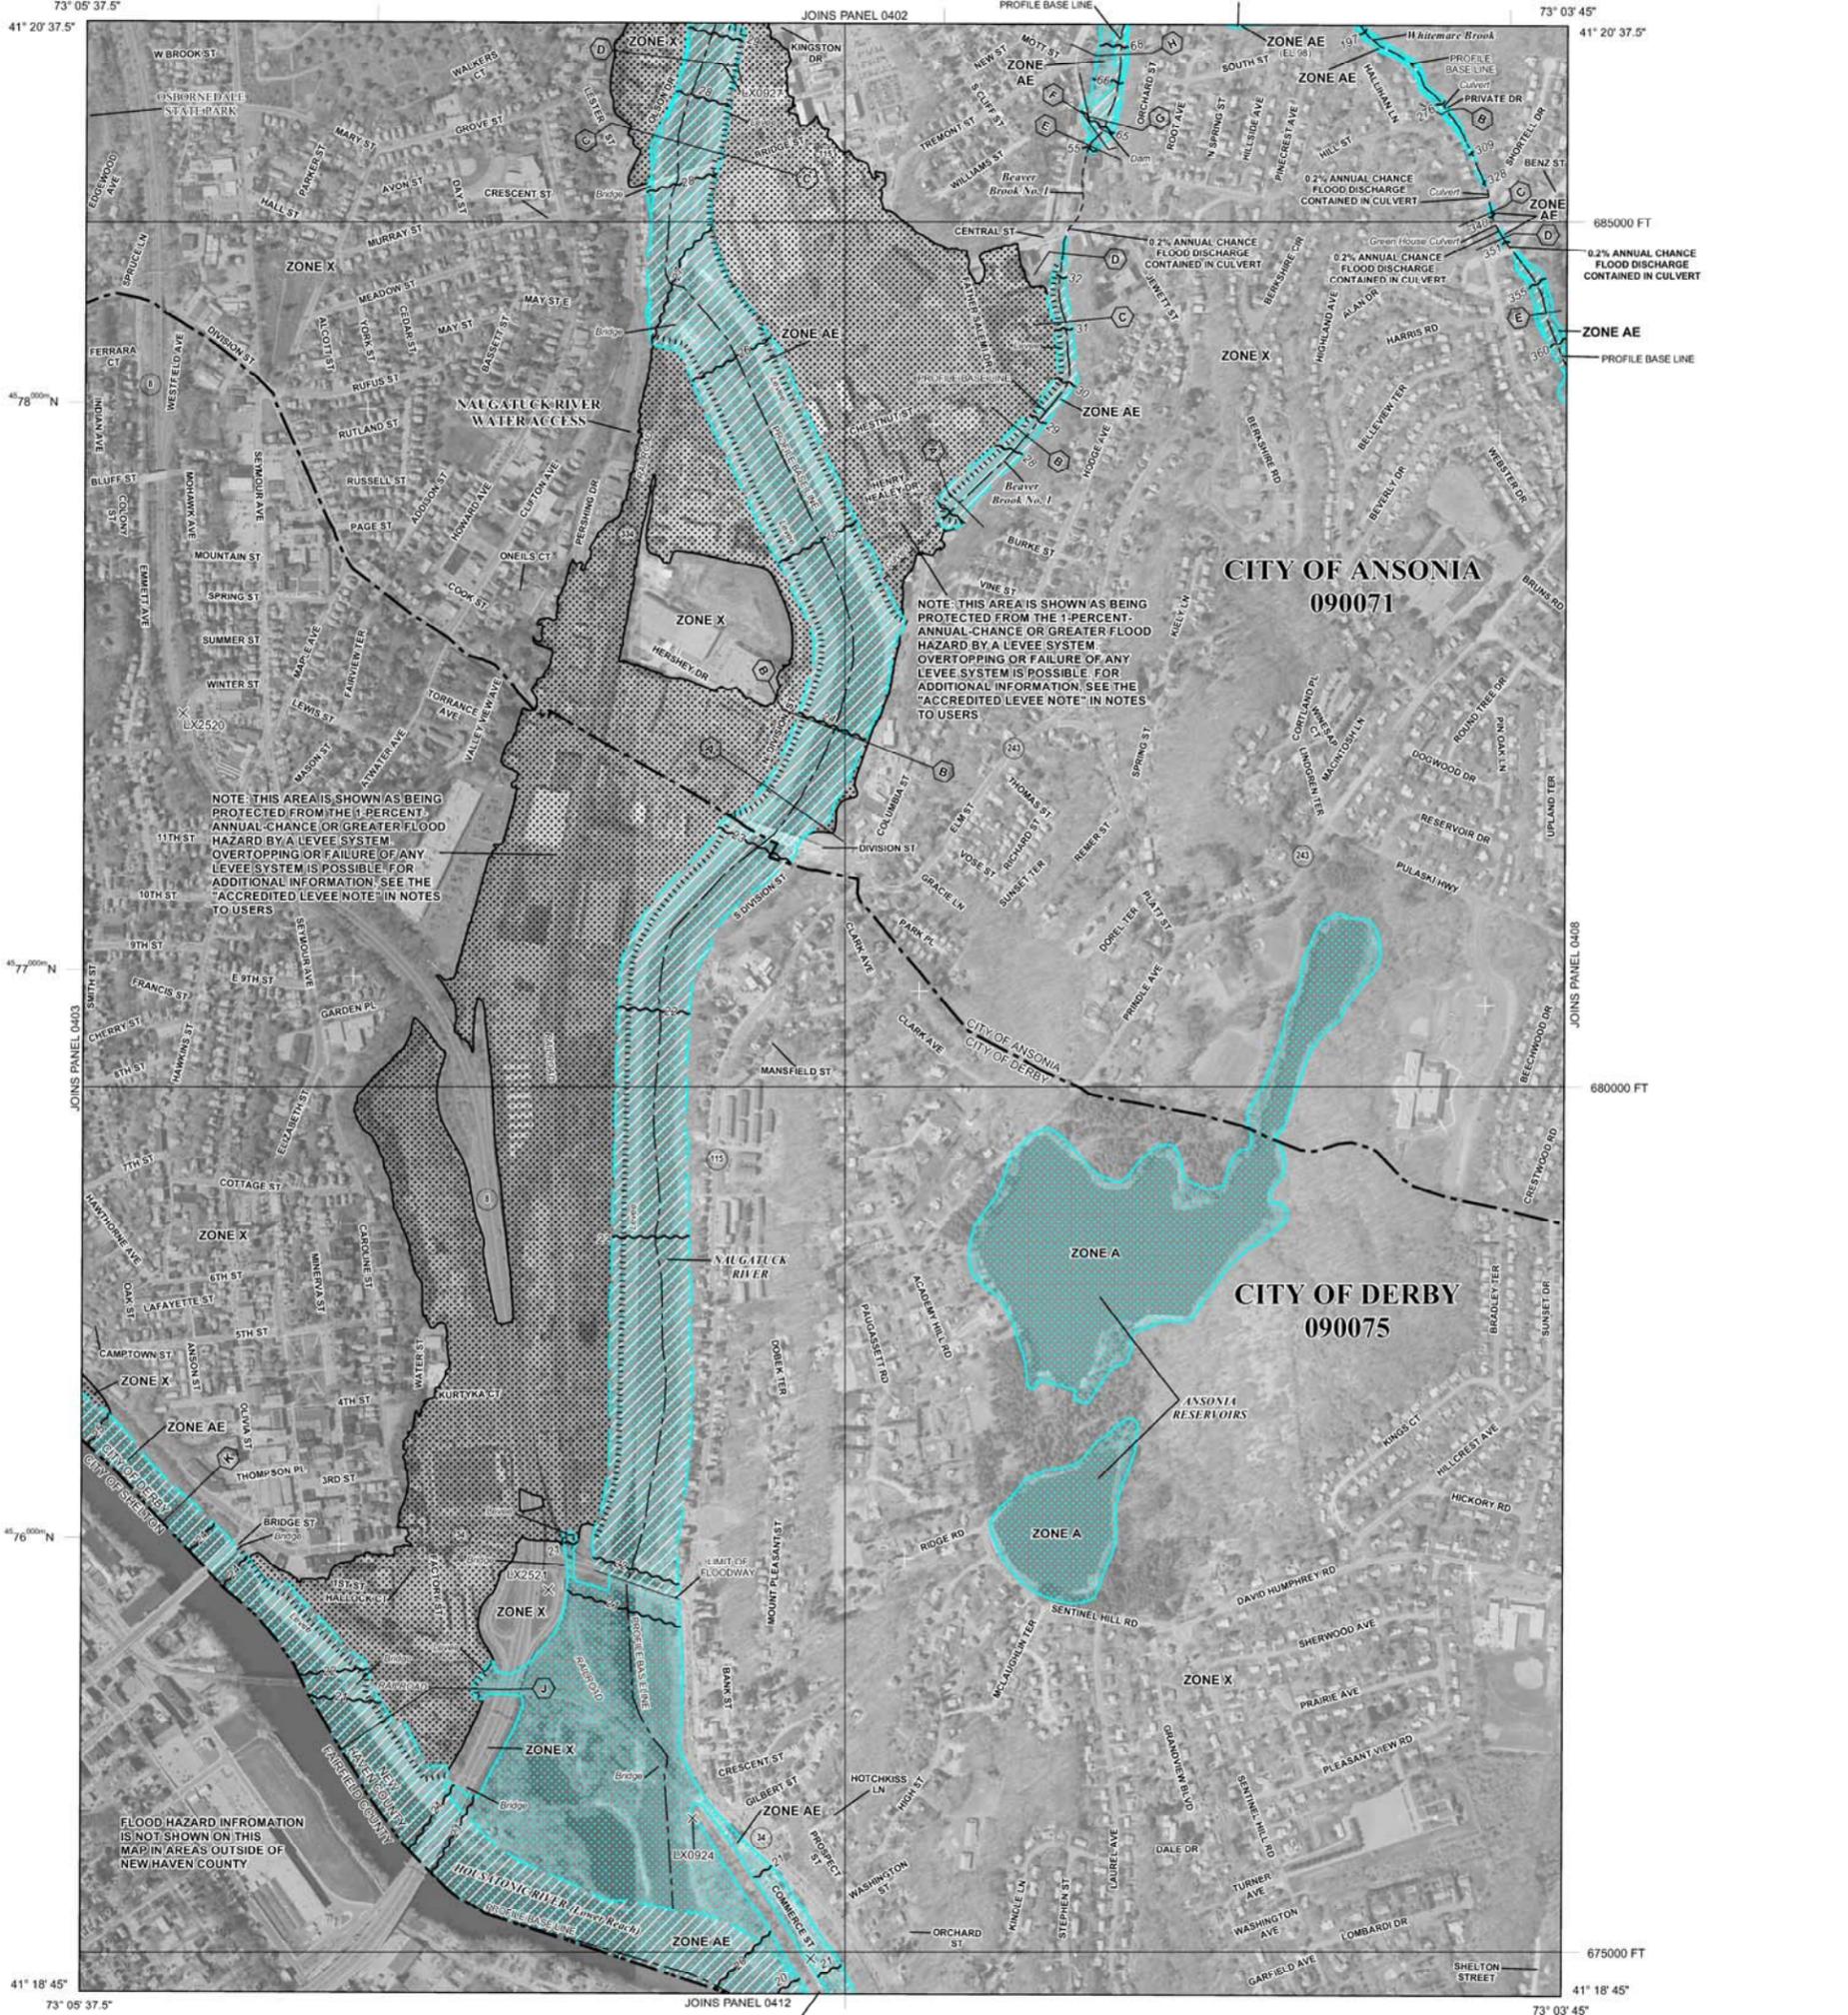

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels, community map repository addresses, and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the **Map Service Center (MSC)** website at <http://msc.fema.gov>. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have **questions about this map**, how to order products, or the National Flood Insurance Program in general, please call the **FEMA Map Information eXchange (FMIX)** at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov/business/nfp>.

FLOOD HAZARD INFORMATION IS NOT SHOWN ON THIS MAP IN AREAS OUTSIDE OF NEW HAVEN COUNTY

The 1% annual chance flood (100-year flood), also known as the **base flood**, is the flood that has a 1% chance of being equaled or exceeded in any given year. The **Special Flood Hazard Area** is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The **Base Flood Elevation** is the water-surface elevation of the 1% annual chance flood.

- ZONE A** No Base Flood Elevations determined.
- ZONE AE** Base Flood Elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR** Special Flood Hazard Areas formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V** Coastal Flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE** Coastal Flood zone with velocity hazard (wave action); Base Flood Elevations determined.

- FLOODWAY AREAS IN ZONE AE**
- OTHER FLOOD AREAS**
- ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
- OTHER AREAS**
- ZONE X** Areas determined to be outside the 0.2% annual chance floodplain.
- ZONE D** Areas in which flood hazards are undetermined, but possible.
- COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS**
- OTHERWISE PROTECTED AREAS (OPAs)**

- CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.
- 1% Annual Chance Floodplain Boundary
- 0.2% Annual Chance Floodplain Boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths, or flood velocities.
- Base Flood Elevation line and value; elevation in feet*
- Base Flood Elevation value where uniform within zone; elevation in feet*

- *Referenced to the North American Vertical Datum of 1988
- Cross section line
- Transect line
- Geographic coordinates referenced to the North American Datum of 1983 (NAD 83) Western Hemisphere
- 5000-foot ticks: Connecticut State Plane Zone (FIPS Zone 0600), Lambert Conformal Conic projection
- Bench mark (see explanation in Notes to Users section of this FIRM panel)
- River Mile

- MAP REPOSITORIES: Refer to Map Repositories list on Map Index
- EFFECTIVE DATE OF COUNTYWIDE FLOOD INSURANCE RATE MAP: December 17, 2010
- EFFECTIVE DATE(S) OF REVISION(S) TO THIS PANEL: October 16, 2013 - to reflect the accreditation of formerly provisionally-accredited levees.

For community map revision history prior to countywide mapping, refer to the Community Map History table located in the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in this community, contact your insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

Natural Diversity Data Base Areas

ANSONIA, CT
December 2022

-  State and Federal Listed Species
-  Critical Habitat
-  Town Boundary

NOTE: This map shows known locations of State and Federal Listed Species and Critical Habitats. Information on listed species is collected and compiled by the Natural Diversity Data Base (NDDB) from a variety of data sources. Exact locations of species have been buffered to produce the generalized locations.

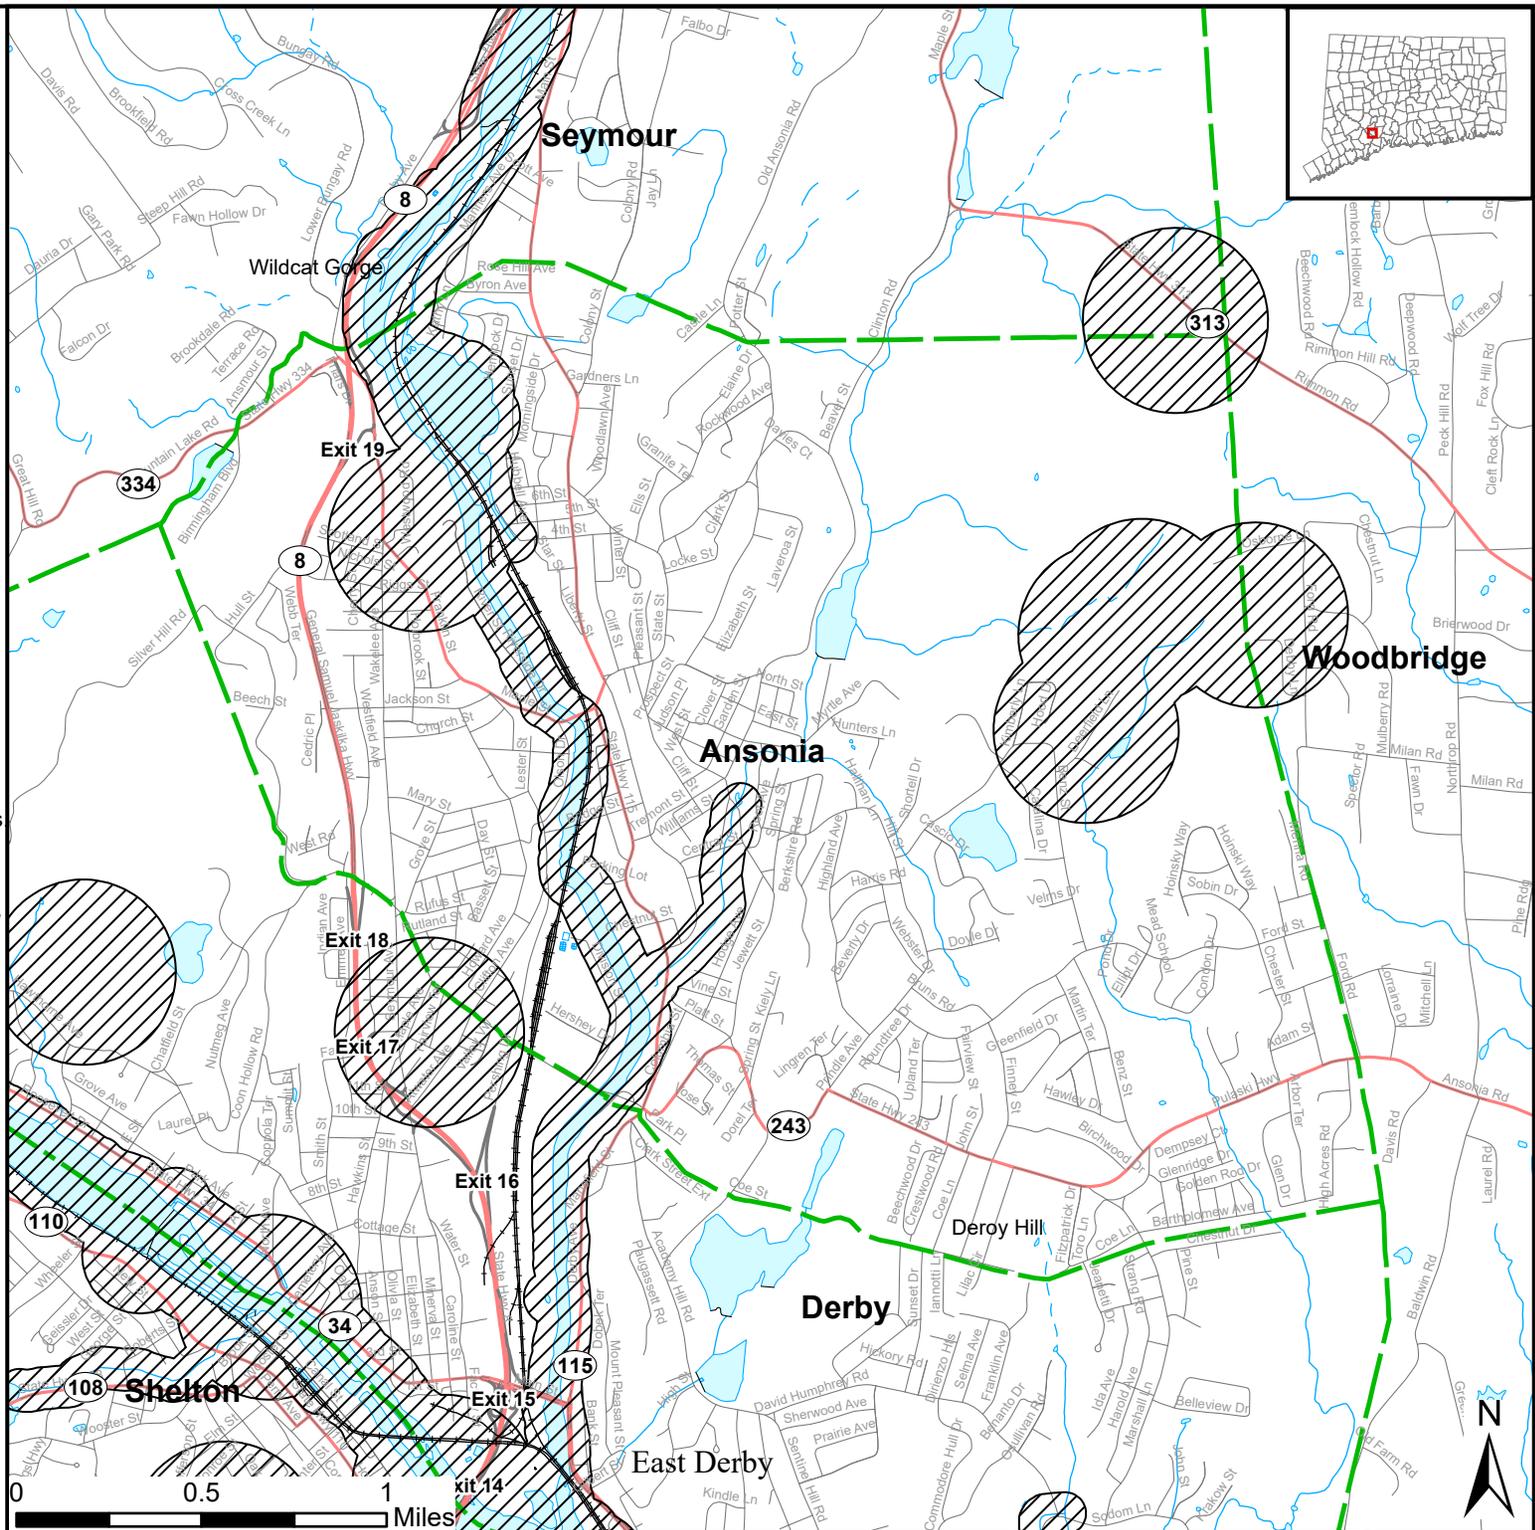

This map is intended for use as a preliminary screening tool for conducting a Natural Diversity Data Base Review Request. To use the map, locate the project boundaries and any additional affected areas. If the project is within a hatched area there may be a potential conflict with a listed species. For more information, use DEEP ezFile <https://filings.deep.ct.gov/DEEPPortal/> to submit a Request for Natural Diversity Data Base State Listed Species Review or Site Assessment. More detailed instructions are provided along with the request form on our website. <https://portal.ct.gov/deep-nddbrequest>

Use the CTECO Interactive Map Viewers at <http://cteco.uconn.edu> to more precisely search for and locate a site and to view aerial imagery with NDDB Areas.

ASTM PRACTICE E1527-13: USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that *all appropriate inquiries (AAI)* is not complete.

GENERAL INFORMATION

User/Client Name: Primrose Companies Realty, LLC

Property Name: Ansonia Sports Complex

Address: Olson Drive, Ansonia CT

#31-105 & #106-#165

Property Type: Vacant Lot

Type of Transaction:

Purchase of Property

Finance of Property

Sale of Property

Ground Lease

Built to Suit Lease

Other: _____

Reason Why Phase I ESA is Required: Bank refinancing

REQUIRED INFORMATION

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

1. Environmental liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? Please note, unless specifically delegated in the Scope of Work for the Phase I ESA, it is the User's responsibility to undertake a review of recorded land title records and judicial records to identify any environmental liens and to report these liens to the environmental professional conducting a Phase I ESA.

Yes _____ No ✓ _____

NOTE 1: Certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and activity and use limitations (AULs) be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

Yes _____ No ✓ _____

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes _____ No ✓ _____

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If no, proceed to parts 4b and 4c.

Yes ✓ _____ No _____

- b) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes _____ No _____

- c) Identify an explanation for the lower price and provide a written record of such explanation as an attachment.

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

- a) Do you know the past uses of the property?

Yes _____ No _____

- b) Do you know of specific chemicals that are present or once were present at the property?

Yes _____ No _____

- c) Do you know of spills or other chemical releases that have taken place at the property?

Yes _____ No _____

- d) Do you know of any environmental cleanups that have taken place at the property?

Yes _____ No _____

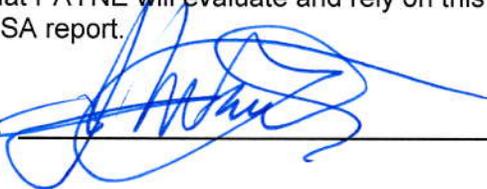

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of releases at the property?

Yes _____ No _____

SIGNATURE

It is understood that the information presented in this form is an integral part of the Phase I ESA process and that PAYNE will evaluate and rely on this information in the development of the final Phase I ESA report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/27/2022 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/27/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/21/2022 has revealed that there is 1

Lists of state- and tribal hazardous waste facilities

CT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the CT SHWS list, as provided by EDR, and dated 04/23/2010 has revealed that there are 4 CT SHWS sites within approximately 1 mile of the target property.

State and tribal institutional control / engineering control registries

CT ENG CONTROLS: An Engineered Control is a permanent physical structure designed to safely isolate pollutants which would otherwise not comply with the self-implementing remedial options allowed in the Connecticut Remediation Standard Regulations (RSRs). The ECGD includes a description of what is eligible to be considered as an Engineered Control under section 22a-133k-2(f)(2) of the RSRs, a description of the information necessary for the preparation of complete and approvable applications, a step-by-step outline of the review and approval process, and supplemental resources provided in the appendices.

A review of the CT ENG CONTROLS list, as provided by EDR, and dated 09/15/2022 has revealed that there are 2 CT ENG CONTROLS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

CT CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CT CPCS list, as provided by EDR, and dated 09/01/2022 has revealed that there are 22 CT CPCS sites within approximately 0.5 miles of the target property.

CT SEH: The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

A review of the CT SEH list, as provided by EDR, and dated 06/22/2022 has revealed that there is 1 CT SEH site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected

EXECUTIVE SUMMARY

listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002482698

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Certifying Person City,St,Zip: Ansonia, CT 06401-1605
Property Transfer Forms: Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAAF)(DEP-PERD-PTP-200).

SEH:

Name: FARREL CORPORATION
Address: 25 MAIN STREET
City,State,Zip: ANSONIA, CT
Date Notified: 02/23/2000
Type Of Hazard: Pollution detected in groundwater that discharges to a surface water body may pose a risk to aquatic life.
Response: DEP reviewed sampling data and determined that the groundwater pollution does not in fact pose a significant threat to surface water quality based on site-specific dilution conditions.
Actions: No specific abatement action necessary.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLOROETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE,

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER
AIR MINOR

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single

1000355486

agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110044175601

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CF). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Registry ID: 110043454767

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Certifying Person Address:	1000 Nicollet Mall - TPN-12K
Certifying Person City,St,Zip:	Minneapolis, MN 55403
Property Transfer Forms:	Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECA F)(DEP-PERD-PTP-200).

Property Transfer Forms:	Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAFA)(DEP-PERD-PTP-200).

Correspondence file dated: 1/5/90, and received form Heynen Engineers of Guilford, CT, 3 USTs previously containing gasoline have been abandoned in this site. GW MWs were installed and soil cores were taken. Sampling, GW contours map was prepared. Previous spill of 100-150 gallons of HF has occurred. However no VOC's detected in soil/water samples. 2 HF USTs should be tested for tightness.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

Hazardous Waste Summary:

Waste Code: D000

Waste Description: Not Defined

Waste Code: D001

Waste Description: IGNITABLE WASTE

Waste Code: D002

Waste Description: CORROSIVE WASTE

Waste Code: D003

Waste Description: REACTIVE WASTE

Waste Code: D006

Waste Description: CADMIUM

Waste Code: D007

Waste Description: CHROMIUM

Waste Code: D008

Waste Description: LEAD

Waste Code: D009

Waste Description: MERCURY

Waste Code: D011

Waste Description: SILVER

Waste Code: F002

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P098

Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Waste Code: P106

FINDS:

Registry ID: 110071138631

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110000316051

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single

1000338814

agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring. US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AIR MINOR

Connecticut Site Information Management System (SIMS) is part of a suite of web-based applications designed to allow the Connecticut Department of Environmental Protection (DEP) staff to harmonize environmental interest information from disparate systems in a single agency-wide data repository (known as CFI). SIMS provides tools for identifying and resolving duplicate data, querying data (using both tabular and geospatial methods), and viewing/maintaining documents associated to the data.

NOV Comments:	Not reported
Release Desc:	In 1992 the Coast Guard acquired from the US Army 16 housing units in Milford & 16 housing units in Ansonia. All HF USTs in those areas were reported to have been removed by the US Army with the exception of three tanks (1 at Ansonia (#9) and 2 at Milford (#10 & #16). HRP Assoc. were retained to verify. Using ground penetrating radar, It was discovered that each of the 16 units in Milford & the 16 units in Ansonia had a 500 gal. Abandoned HF UST. Each unit had a replacement AST. (In Ansonia all units with the exception of 9A had an abandoned 500 UST)
Running Comments:	550, Heating Oil, GOVERNMENTAL, 550 UST removal/samples pending soil removed See also OCSR# 99-0648499-06486, 99-06488, 99-0648999-06483

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: N/A
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 02/03/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/10/2023
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: N/A
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 02/02/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/10/2023
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Data Release Frequency: No Update Planned

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/27/2022
Date Data Arrived at EDR: 11/01/2022

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 08/25/2022

Telephone: 703-603-8704
Last EDR Contact: 12/21/2022
Next Scheduled EDR Contact: 04/10/2023
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 04/27/2022	Source: Environmental Protection Agency

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilities name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

LWDS: Connecticut Leachate and Wastewater Discharge Sites

The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

Date of Government Version: 07/17/2009	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 10/21/2009	Telephone: N/A
Date Made Active in Reports: 10/30/2009	Last EDR Contact: 10/15/2014

	Data Release Frequency: Varies

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/16/2022	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 11/16/2022	Telephone: 860-424-3375
Date Made Active in Reports: 02/06/2023	Last EDR Contact: 02/10/2023
Number of Days to Update: 82	Next Scheduled EDR Contact: 05/22/2023
	Data Release Frequency: No Update Planned

NPDES: Wastewater Permit Listing

A listing of permits issued by the DEP.

Date of Government Version: 05/02/2022	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 05/05/2022	Telephone: 860-424-3832
Date Made Active in Reports: 07/28/2022	Last EDR Contact: 12/13/2022
Number of Days to Update: 84	Next Scheduled EDR Contact: 04/03/2023
	Data Release Frequency: Varies

SEH: List of Significant Environmental Hazards Report to DEEP

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

Date of Government Version: 06/22/2022	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 06/23/2022	Telephone: 860-424-3766
Date Made Active in Reports: 09/12/2022	Last EDR Contact: 01/05/2023

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

VACANT LOT
OLSON DRIVE
ANSONIA, CT 06401

TARGET PROPERTY COORDINATES

Latitude (North):	41.343834 - 41° 20' 37.80"
Longitude (West):	73.081955 - 73° 4' 55.04"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	660477.6
UTM Y (Meters):	4578489.5
Elevation:	65 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	11730099 ANSONIA, CT
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

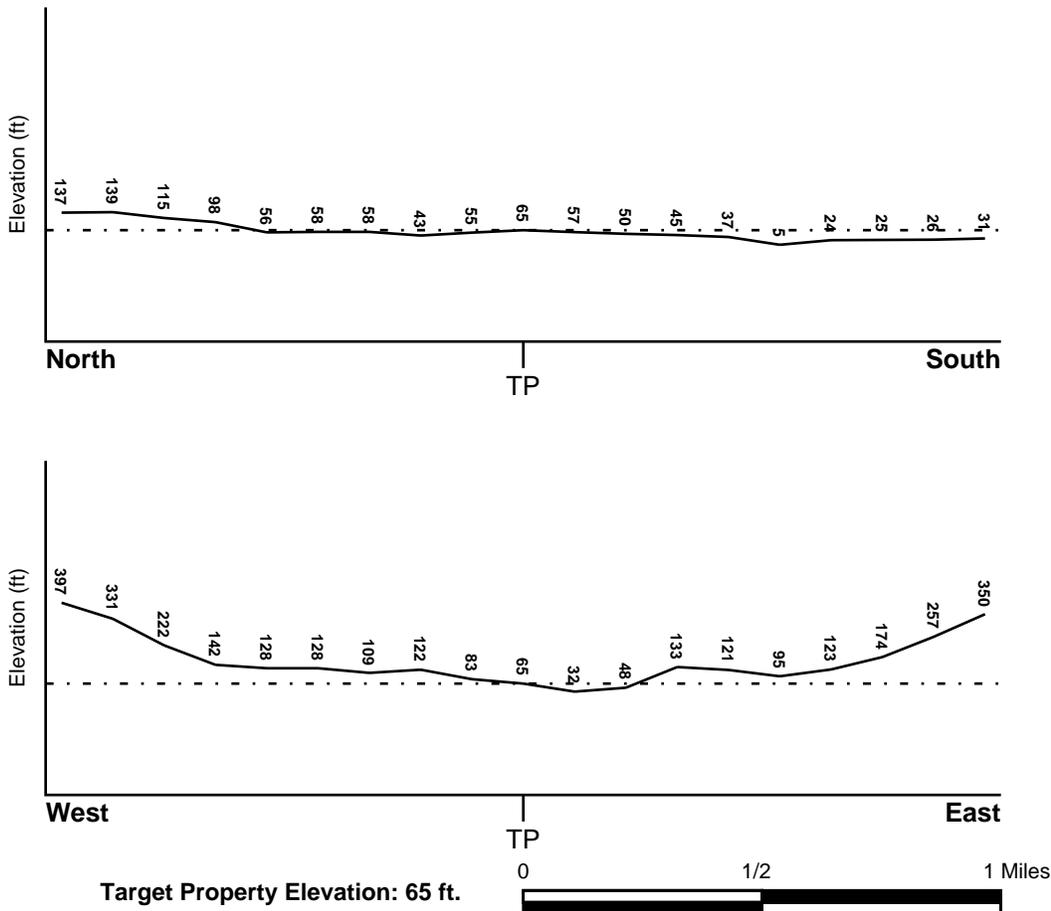

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
09001C0305F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
ANSONIA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile North
Site Name:	ANACONDA INDUSTRIES
Site EPA ID Number:	CTD060005766
Groundwater Flow Direction:	TOWARD THE NAUGATUCK RIVER IN THE OVERBURDEN AQUIFER (ON BOTH SIDES OF THE RIVER). IT IS ASSUMED THAT FLOW DIRECTION IN THE BEDROCK AQUIFER IS SIMILAR TO THE OVERBURDEN AQUIFER.
Measured Depth to Water:	4.12 to 21.34 feet.
Hydraulic Connection:	Detailed hydraulic connection information is not available. The depth to bedrock at the site ranges from more than 10 to greater than 45 feet. Ground water at the site is classified as GB by the Connecticut DEP.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture: material

Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	material	Not reported	Not reported	Max: 141 Min: 0.07	Max: Min:

Soil Map ID: 2

Soil Component Name: Agawam

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information

Soil Map ID: 5

Soil Component Name: Charlton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Tidal Wetlands

Telephone: 860-424-4054

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Community and Non-Community Water System Wells

Source: Department of Public Health, Water Supplies Section

Telephone: 860-509-7333

Active, emergency and inactive wells used for potable purposes that are owned and operated by active community and non-community water systems in Connecticut.

OTHER STATE DATABASE INFORMATION

Connecticut Leachate and Wastewater Discharge Sites

Source: Department of Environmental Protection

Telephone:

The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EPA-Approved Sole Source Aquifers in Connecticut

Source: EPA

Telephone:

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Payne Environmental Inc were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The EDR Vapor Encroachment Worksheet enables EDR's customers to make certain online modifications that effects maps, text and calculations contained in this Report. As a result, maps, text and calculations contained in this Report may have been so modified. EDR has not taken any action to verify any such modifications, and this report and the findings set forth herein must be read in light of this fact. Environmental Data Resources shall not be responsible for any customer's decision to include or not include in any final report any records determined to be within the relevant minimum search distances.

This report contains information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.**

Purchaser accepts this report "AS IS". Any analyses, estimates, ratings, or risk codes provided in this report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can produce information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

SEH: Other Ascertainable Records

Name: FARREL CORPORATION
 Address: 25 MAIN STREET
 City,State,Zip: ANSONIA, CT
 Date Notified: 02/23/2000
 Type Of Hazard: Pollution detected in groundwater that discharges to a surface water body may pose a risk to aquatic life.
 Response: DEP reviewed sampling data and determined that the groundwater pollution does not in fact pose a significant threat to surface water quality based on site-specific dilution conditions.
 Actions: No specific abatement action necessary.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Payne Environmental Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

1.0 Introduction

1.1 General

This *Phase III ESA & Soil Management Plan* (herein referred to as the SMP) summarizes the soil management actions proposed for redevelopment to be undertaken at the Riverside Apartment North located on Olson Drive In Ansonia, Connecticut (see Figure 1 in Attachment A). The proposed soil management actions at the site are collectively referred to as the Remedial Activity and will be conducted after reasonable opportunity for review and comment by the Owner, Construction Manager and their general contractor.

This SMP focuses on the technical aspects of the proposed remedial actions for which approval by a Connecticut Licensed Environmental Professional (LEP) may be required. Several other remedial action components (primarily related to the implementation of the remedial actions) are presented herein, although such information is presented in general terms. Several of the implementation components of the remedial actions (as presented in this SMP) are also subject to future modification either prior to and/or during execution of the remedial actions.

Modifications may occur as a result of field conditions (actual versus anticipated), project sequencing and logistics, availability of key equipment and materials, and other related changes that allow the Owner to improve upon the overall project performance, efficiencies, and schedule. The Owner's ability to identify and implement such modifications have been demonstrated on numerous occasions for remediation projects of similar scope and complexity over the several few years, and the Owner will draw from that experience to ensure that the response actions performed at the Site are equally successful.

1.2 Overview of Proposed Actions

The primary remedial action for the site involves the removal of polluted fill and underlying native soils. As presented in this SMP, it is anticipated that excess fill/soils will be excavated during planned constructions activities, which will require the reuse of this material onsite and/or treated/disposed of at an offsite permitted facility.

The proposed remedial actions are primarily related to the presence of lead, arsenic and/or polycyclic aromatic hydrocarbons (PAHs) in surficial soils. Solid waste debris fragments, including wood, brick, masonry, concrete slabs, metal, and other domestic wastes may also be encountered during soil excavation activities.

Included in this SMP is an anticipated schedule related to the proposed action.

1.3 Site History

The site includes the parcel and improvements known as the Riverside Apartments North, located at 106-165 Olson Drive in the City of Ansonia, New Haven County, Connecticut at 41°20'41.69" N latitude and 73°04'54.82" W longitude. This portion of the site is identified in the Ansonia Assessor's Office as parcel 0310068.8.

The site is located between High Street and Olson Drive. Olson Drive and the Naugatuck River abuts the site easterly. According to City Assessor records, the site is located within a multi-family district (GA zone) and the City Center Zoning District. The site is located at an elevation of approximately 36 feet above sea level (National Geodetic Vertical Datum of 1929). The topography of the site is generally level, with minor downward sloping on moving from northwest to the southeast.

The approximately 3-acre parcel is improved with four (4) multi-family apartment buildings and a new boiler house. The residential buildings were constructed circa 1960 and are currently in a state of disrepair. The boiler house was constructed circa 2010-2011 as part of a mechanical decentralization project. Site plans are provided in Attachment A.

The existing residential apartment buildings were constructed circa 1963. Olson Drive does not appear listed prior to 1963. Based on aerial photographs and Sanborn mapping Jersey Street was formerly located between High Street and Lester Street which consisted of several residential and commercial structures prior to the development of Riverside Apartments. The historical structures were reportedly destroyed in 1955 during the Naugatuck River flood. The site has undergone significant filling since the great flood as part of an overall flood protection system designed and implemented by the Army Corp of Engineers.

1.4 Environmental Setting

The site is located at an elevation of approximately 36 feet above sea level (National Geodetic Vertical Datum of 1929). The topography of the site is generally level, with minor downward sloping on moving from northwest to the southeast.

The Site is located within the Iapetus, Connecticut Valley Synclinorium. The subsurface geology at the subject Site is reported to be gray to spotted, medium to coarse grained, foliated gneiss. Bedrock was not encountered during the investigation.

Soils in this area generally are classified as urban land. This map unit consists of areas where urban structures cover more than 85 percent of the surface and the map unit is predominantly artificial fill and Udorthents, which are well drained to excessively drained soils mainly near urban areas.

Based on environmental investigations conducted on the south abutter (Riverside Apartments Southside), that site is overlain with two (2) distinct fill layers. The upper layer, generally observed to range in 2-12 feet in thickness, consists of a light-medium brown sandy fill layer with varying percentages of silt and gravel. This upper fill layer is underlain with a darker sandy fill material, consisting of ash, coal, brick, glass, asphalt, plastic and concrete. The thickness of this fill layer ranges from 2-8 feet. Natural brown fine-to-coarse sand with cobbles and gravel are encountered below the fill layers, at depths typically ranging from 6-20 feet below ground surface.

Groundwater in the general vicinity of the subject site is classified by CTDEEP as GA groundwater. The GA classification is defined by CTDEEP as groundwater within the area of private water supply wells or an area with the potential to provide water to public or private supply wells. The CTDEEP presumes that groundwater in a GA area is, at a minimum, suitable for drinking or other domestic uses without treatment.

The groundwater flow direction based on surface topography and monitoring well data, is inferred to be generally east/southeast towards the Naugatuck River, which is located within 100 feet of the Site to the east. Depth to groundwater at the site is expected to be approximately 20 feet below ground surface, based on environmental investigations conducted on the south abutter.

The Site is located in the Naugatuck River Sub Regional Basin of the Naugatuck Complex, which is tributary to the Housatonic River. The nearest natural surface water body is the water body is the Naugatuck River, essentially abutting the property easterly (Figure 1).

According to the CTDEEP, the surface water quality of the Naugatuck River classified as B. Class B surface waters are not potential drinking water supplies; however, designated uses include fish and wildlife habitat, recreational uses, agricultural and industrial supply, and other legitimate uses including navigation.

The property lies with flood zone X (areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than one foot or within drainage areas less than one square mile; and areas protected by levees from 1% annual chance flood), as depicted on Flood Insurance Rate Map No. 09009C0404H, panel 404 of 635 with an effective date of December 17, 2010.

Based on site observations and survey of record mapping, there are no inland wetlands on the subject site.

1.5 Regulatory Setting

Analytical results for the soil data obtained at the site were compared to the Remediation Standard Regulations (RSRs) developed by the Department of Energy & Environmental Protection (DEEP). The site is currently not in a regulatory program where the RSRs apply. Although the RSRs are not applicable to the site, they were utilized as a guideline for a reasonable standard of care in evaluating soil data and potential risk issues.

The DEEP's intent in developing these regulations is to define minimum remediation performance standards and specific numeric cleanup criteria, and to clearly specify a process for establishing an alternative site-specific standard. Although the RSRs do not specifically apply to this site, they will be used here as the standard of care in evaluating the environmental compliance status and risk issues at the site, to be protective of human health and the environment.

The regulatory requirements associated with the two primary goals of site investigations are presented in the following paragraphs.

(1) To determine whether the identified AOCs are "Release Areas" as defined in the RSRs.

A Release Area is defined in Section 22a-133k-1 of the RSRs as "...the land at and beneath which polluted soil is located as a result of a release." Polluted soil as defined in the RSRs as, "...soil affected by a release of a substance at a concentration above the analytical detection limit for such substance." If there is no polluted soil present in an AOC, or if polluted soil is present but can be demonstrated not to be the result of a release associated with the AOC, then the AOC is not a release area under the RSRs. This metric is the basis for conclusions regarding release area status in this report.

(2) To provide information with which to validate or modify the conceptual site model for the property, which in turn provides for an understanding of the potential risk of impact to human health or the environment from site conditions.

This objective is addressed in part by comparing the results of soil sample analysis with applicable RSR criteria. The RSRs provide different remediation target criteria for constituents based primarily on the variables of (1) groundwater classification beneath and in the area of the property, and (2) whether the property is dedicated to residential or industrial/commercial use.

Groundwater in the general vicinity of the subject site is classified by CTDEEP as GA groundwater. The GA classification is defined by CTDEEP as groundwater within the

area of private water supply wells or an area with the potential to provide water to public or private supply wells. The CTDEEP presumes that groundwater in a GA area is, at a minimum, suitable for drinking or other domestic uses without treatment.

Section 22a-133k-2 of the RSRs establishes two (2) criteria for soil:

- Direct Exposure Criteria (DEC) that seek to protect humans from potential risks associated with direct exposure to contaminated soils; and
- Pollutant Mobility Criteria (PMC) that are designed to protect groundwater from contaminants that may leach from soil to the groundwater.

1.6 Previous Environmental Investigations

Multiple environmental investigations and remedial activities have been conducted at the site for the period 1999-2014. A brief summary of these investigations is provided herein:

Phase I ESA, Riverside Apartments North, 106-165 Olson Drive, Ansonia, Connecticut, prepared by Payne Environmental LLC, dated April 10, 2013:

PAYNE conducted a Phase I ESA for the Site, which identified three AOCs: (1) Potential for polluted fill; (2) Potential releases from pole-mounted transformers located on the site; and (3) Potential releases of petroleum-related fluids to surficial soils may potentially have occurred due to leakage from the hydraulic fluid reservoir or associated hydraulic lines.

PAYNE recommended that a Phase II ESA be performed at the site to evaluate identified RECs in order to determine if there had been a release at the site.

Phase II ESA, Riverside Apartments North, 106-165 Olson Drive, Ansonia, Connecticut, prepared by Payne Environmental LLC, dated August 2013:

The Phase II ESA was conducted in order to evaluate the RECs identified in PAYNE's April 2013 Phase I ESA. The scope of work consisted of the following items:

- Pre-Drilling Tasks & Utility Mark-out, including development of a site-specific Health & Safety Plan (HASP) ;
- Development of a Soil Sampling and Analysis Plan (SSAP);
- Installation of six (6) surficial soil borings;
- Installation of five (5) soil borings to depths up to 20 feet below grade utilizing direct-push technology;

- Laboratory analysis of soil samples for target compounds;; and
- Preparation of a Phase II ESA Report.

A total of three (3) AOCs/RECs were identified for the subject site. These AOCs included AOC-1: Polluted Fill; AOC-2: Hydraulic Trash Compactors; and AOC-3: Pole-Mounted Transformers.

Of the three (3) AOCs, two (2) AOCs (AOC-1, AOC-2) were determined to be Release Areas and warrant additional investigation in the form of a Phase III ESA in order to determine the degree and extent of contamination within each release area. No release was observed for AOC-3, pole-mounted transformers.

The data from Phase II testing indicated that release areas were identified for AOC-1 and AOC-2 and that petroleum hydrocarbons, lead, arsenic, PCBs and/or PAHs were present in surficial soils and deeper fill materials at concentrations above applicable RSR criteria. In addition

Based on planned redevelopment of the site, PAYNE recommended that a Phase III ESA sampling program be developed and implemented. The primary objectives of this Phase III ESA are to conduct investigations to define the nature and extent of identified release areas and to provide a basis for making critical decisions regarding conditions that do not comply with the Remediation Standard Regulations (RSRs).

1.7 Phase III ESA – January 2016

PAYNE conducted a targeted soil sampling program in order to collect sufficient data to render options for the reuse and/or offsite disposal of fill and native soils anticipated to be excavated and/or disturbed as part of planned redevelopment activities. These specifically included soils located within proposed building foundations. Soils in other areas of the site were sufficiently characterized in previous investigations.

1.7.1 Drilling Activities

Between January 6-14, 2016, PAYNE field personnel mobilized to the site to oversee the installation of soil borings. For this work, PAYNE co-collected soil samples during a geotechnical study performed by GZA GeoEnvironmental, Inc. (GZA), who was retained by Tise Design Associates (TDA) to conduct a subsurface investigation for the proposed housing redevelopment at the Site.

The proposed development will consist of one- to three-story, wood-framed, residential apartment units. A total of 54 housing units in 29 new buildings are planned. Associated

asphalt-paved parking, drive, and landscape areas are also proposed. The project site is divided into two parcels, a North Parcel and a South Parcel, with High Street dividing the two parcels.

The project includes demolition of existing structures on the north parcel. The north parcel will have 14 new buildings. Finished floor elevations for the new structures vary between El. 35.3 ft. and El. 37.8 ft. Proposed cut/fill are at or near existing grades. The south parcel will have 15 new buildings. Finished floor elevations for the new structures vary between El. 32.0 and El. 35.5 ft. Proposed cut/fill are at or near existing grades. It is our understanding that no basements are planned in any of the proposed buildings.

Soil samples collected were obtained utilizing standard hollow-stem auger drilling techniques; Welti installed a total of ten (10) soil borings (B-14 through B-21) within the footprints of proposed residential structures. PAYNE collected a total of nineteen (19) soil samples for subsequent laboratory analysis for target compounds. Drilling was conducted by Hardiman Company & Associates, Inc. of Shelton, Connecticut.

Soil boring locations are depicted in Figure 2 (Attachment A); test boring logs are provided in Attachment C.

Fill was encountered in all of the test borings and ranged in depth from the existing ground surface to 17 feet below existing grades. Fill generally consisted of granular soils with varying amounts of silt, ash, cinders, concrete, asphalt, wood, brick fragments, and glass.

The granular soils consisted of sand with varying amounts of gravel and silt. It ranged in relative density from medium dense to very dense. At the time the test borings were taken, groundwater was encountered in all of the test borings, with the exception of test borings GZ-8, GZ-9, GZ-10, GZ-14, GZ-14A, GZ-14B, GZ-15, GZ-16, GZ-18, GZ-22, and GZ-23. Groundwater levels were at depths ranging from 19.5 to 23 feet below existing grades at the Site.

Select soil samples were subsequently submitted to Complete Environmental Testing, Inc. (Stratford, CT) for appropriate laboratory analyses, including polycyclic aromatic hydrocarbons (PAHs, Method 8270D) and RCRA 8 metals (Method 6020A). These parameters were selected in order to obtain relevant data for onsite soil reuse in Connecticut. CET is a Connecticut State-certified laboratory (CT# PH-0116).

1.7.2 Installation of Groundwater Monitoring Wells

Four (4) groundwater monitoring wells (MW-1, MW-2, MW-3 and MW-4) were installed to depths of 28-30 feet below grade utilizing hollow-stem auger drilling methods. Monitoring wells were constructed of two-inch diameter, threaded, flush-jointed,

polyvinyl chloride (PVC) well casing with slotted PVC screen (No. 10 screen). The bottom of each well was positioned to intercept the water table to capture any floating product and allow for seasonal fluctuations in water levels. In addition, wells were screened to deeper depths in order to allow for sufficient groundwater recovery and to screen for the potential of VOCs at deeper groundwater depths.

The annular space surrounding the well screen was filled with No. 1 Ottawa sand to an elevation one to two feet above the top of the screen. Above the sand, a bentonite seal was placed to seal the well from formation above. Soil boring spoils were used to backfill the remainder of the annular space. Finally, a concrete collar was poured around a flush-mounted, protective steel case with a locking cap to secure the well.

PAYNE personnel conducted groundwater sampling on January 31, 2016 utilizing low-flow sampling techniques. Prior to sampling, field measurements were made of the depth to groundwater surface and total depth of each overburden well. The measurement instrument (Solonist Model 101) was decontaminated with deionized, distilled water before introduction into each well.

Following field measurements and well purging, groundwater samples were collected after recording consistent field measurements of pH, conductivity, turbidity, dissolved oxygen and temperature. Field measurements were obtained with a Horiba U-22 water quality meter equipped with a Solonist U-22 flow cell.

A total of four (4) unfiltered groundwater samples were collected, stored in laboratory-supplied glassware and submitted for laboratory analysis for volatile organic compounds (USEPA Method 8260B). The samples were delivered to Complete Environmental Testing, Inc. (CET) of Stratford, CT for analysis. CET is a Connecticut State-certified laboratory (CT# PH-0116).

1.7.3 Quality Assurance/Quality Control

The DEEP finalized *Reasonable Confidence Protocols* (RCPs) in August 2006. These RCPs are guidelines for enhanced QA/QC procedures for analytical methods and reporting. The DEEP recommends that environmental professionals request that the laboratory follow the RCPs when producing data that is used as the basis of decisions regarding compliance with the RSRs.

PAYNE's QA/QC data validation consisted of a review Laboratory QA/QC Certification Form and confirmation of attainment of data quality objectives (i.e. applicable regulatory criteria).

PAYNE reviewed the QA/QC data associated with the laboratory analyses conducted on all soil and groundwater samples. Data validation consisted of evaluating the one or more of the following items:

- Sample holding times
- Field, trip and/or laboratory blanks
- Field duplicate results
- Laboratory duplicate results
- Matrix spike/matrix spike duplicate results
- Laboratory control spike recoveries
- Surrogate spike recoveries

Although there were instances of non-compliance with the Reasonable Confidence Protocol (RCP), overall these non-compliance issues were minor and few. As a result, the analytical data were deemed adequate and usable for the intended purpose.

1.7.4 Results of Investigation

A summary of analytical results for constituents detected in soil and groundwater are presented in Table 1 Table 2, respectively (see Attachment B). Soil analytical results were compared to the Res. DEC and GAPMC of the RSRs, as described in Section 1.4 above. No volatile organic compounds were detected in groundwater samples.

The laboratory analytical reports for soil samples analyzed during this investigation are included as Attachment D to this report.

Polycyclic Aromatic Hydrocarbons (PAHs) - Soil

PAH-related constituents were detected above laboratory method detection limits in 16 of 19 soil samples, with exceedances of applicable RDEC observed in 11 soil samples.

RCRA 8 Metals - Soil

A total of 19 soil samples were submitted for laboratory analysis for RCRA 8 metals. Detected metals typically included arsenic, barium, cadmium, chromium, lead, mercury and selenium. All detected concentrations of metals were generally consistent in all samples and may be representative of background conditions, although this cannot be confirmed due to lack of proper control samples. All detections were observed to be well below applicable RDEC.

Volatile Organic Compounds - Groundwater

No VOCs were detected in the four (4) groundwater samples submitted for analysis, within laboratory method detection limits. No VOCs were detected in the trip blank, submitted as part of PAYNE's quality control program.

Data Quality Assessment

Data quality objectives (DQOs) are used to ensure that data is collected in a manner that permits it to be used to evaluate conditions at a site and support decisions based on those evaluations. Procedures used to ensure that the DQOs for this project were met include the following:

- Selection of analytical methods with appropriate detection limits
- Use of pre-determined sampling handling and custody procedures
- Use of pre-determined data management and documentation procedures
- Selection of sampling locations and COCs appropriate to the study area
- Use of Connecticut's soil VOC sampling procedure
- Use of Connecticut's RCP and laboratory QA/QC procedures

A data quality analysis (DQA) and data usability evaluation (DUE) were conducted on the samples collected during the soils investigation. The DQA/DUE was conducted in accordance with DEEP's *"Laboratory Quality Control Assurance and Quality Control, Data Quality Assessment, and Data Usability Evaluation Guidance Document"*, dated May 2009. All data were analyzed and evaluated by CET using DEEP's Reasonable Confidence Protocols (RCP), as referenced in DEEP's November 2007 guidance document entitled *"Reasonable Confidence Protocols"*.

A discussion of the non-conformities during the DUE is provided in Attachment C. Although the specified QA/QC performance criteria were reportedly not met by the laboratory during the soil analysis events, the laboratory datasets met the requirements for reasonable Confidence according to the Connecticut guidance document. Therefore, the results were concluded to be valid for their intended use as investigation and pre-characterization data.

1.8 Format of SMP

The remainder of this SMP is presented in four sections. The title and a brief overview of each section follow:

Section 2 – Options to address soil impacts

Section 3 – Soil Management

Section 4 - Site Excavation Work Approvals/Documentation

Section 5 - Project Schedule

Throughout this SMP, tables and figures are referenced to supplement the report text and provide more detailed information concerning various aspects of the proposed remedial action. In addition, several documents and reports related to the site are also available under separate cover for review. These reports provide an even greater level of detail should such information be desired (as appropriate, references to the prior documents will be provided within this SMP).

Copies of site figures are provided in Attachment A. Soil/groundwater data tables and laboratory data are provided in Attachments B & D, respectively.

2.0 Options to Address Soil Management

Options to reuse or dispose/treat excavated polluted fill and native soils generated during planned redevelopment are presented below.

The same remedial options will also be considered to address potential future soil disturbances in areas outside of planned redevelopment (i.e. future utility work, installation of other site improvements such as recreation areas; work undertaken by landscapers, etc...).

Option 1: Excavation and On-site Reuse (RDEC Compliant Soils)

All excess polluted soil and fill material with detected concentrations below laboratory detection limits or below the Residential Direct Exposure Criteria (RDEC) could be excavated and reused on-site at suitable locations without restriction. Based on the potential volume of polluted fill material and native soil that potentially contains concentrations of constituents exceeding the RDEC, this option is the most economically feasible for the site.

Excavated fill and native soils can be used as backfill at the site if it meets the physical criteria specified in the project documents.

Option 2: Excavation and Off-site Reuse/Treatment/Disposal

All excess polluted fill and native soil material with detected concentrations exceeding laboratory detection limits or the Residential Direct Exposure Criteria (RDEC) could be excavated and reused/treated/disposed off-site at a suitable receiving facility during site redevelopment activities. Based on the potential volume of polluted fill material and native soil that potentially contains concentrations of constituents exceeding the RDEC, this option does not appear to be economically feasible for the site.

Option 3: Render Polluted Fill/Soil Inaccessible as Defined by the RSRs

The RSRs define inaccessible soil as:

...polluted soil which is (A) more than four feet below the ground surface; (B) more than two feet below paved surface comprised of three inches of bituminous asphalt or concrete, which two feet may include the depth of any materials used as a sub-base for the pavement; (C) polluted fill beneath bituminous concrete or concrete surface comprised of a minimum of three inches of bituminous concrete or concrete if such fill is

(i) polluted in excess of applicable direct exposure criteria only by semi-volatile substances or petroleum hydrocarbons that are normal constituents of bituminous concrete, (ii) polluted by metals in concentrations not in excess of two times the applicable direct exposure criteria, or (iii) any combination of the substances or limits identified in clause (i) or (ii) of this subparagraph; or (D) (i) beneath a building or (ii) beneath another existing permanent structure provided written notice that such structure will be used to prevent human contact with such soil has been provided to the Commissioner.

The redevelopment plan for the site has been evaluated to determine if it would be possible to leave excess polluted fill and/or native soil exceeding the RDEC in place or move the material to a location at the site to meet the inaccessible soil definition. This option may be appropriate if locations can be identified at the site where such fill/soils could be relocated.

2.1 Recommended Options

Subsurface sampling has identified polluted soil associated with fill and soil materials that were likely placed at the site at the time or prior to the development of the existing site. At this location, the soil has been found to contain metals and/or PAHs at concentrations exceeding laboratory detection limits and/or baseline numeric clean-up criteria published by DEEP.

Based on a preliminary review of the three (3) options discussed above, Options 1 and 3 appear to be the most feasible option to address excess polluted fill and native soil where there have been exceedances of the RDEC. In this case, polluted soils exceeding the RDEC would have to be placed in such a way as to render it inaccessible.

3.0 Soil Management

3.1 Roles and Responsibilities of Project Team

The purpose of this section is to identify the roles and responsibilities of individual project team members and procedures to be followed when handling potentially polluted site materials. In addition, the **General Contractor** shall be responsible for identification and compliance with all applicable Federal, State, and local rules, regulations, and laws related to worker health and safety, as well as permits or licenses for handling, storage, transportation, and disposal of soil, sediment, and groundwater.

3.1.1 Project Team

- Contractor
- Soil Transporter
- Engineer (Soil Management)
- Owner
- Construction Manager

3.1.2 Roles and Responsibilities

Environmentally-impacted fill and soil material is expected to be encountered during the project. Various members of the project team will be required to perform specific duties during site redevelopment activities.

The **Contractor** shall be responsible for the following:

- Providing all labor, materials, equipment, and other services required for handling, segregating, stockpiling, reusing, loading, transporting, and disposing of target material encountered during the performance of the work within the project area and/or earthwork located outside the project limits.
- Protecting the health of workers and individuals that enter the site and the general public.
- Minimizing additional impacts to the environment.

- Obtaining all Federal, State, and local permits required under various environmental, worker, and health-related regulations for the soil management.
- Schedule coordination with the **Engineer, Owner, and Construction Manager**.
- Coordinating communications with all subcontractors regarding soil management issues.
- Coordinating with the **Engineer** to establish and maintain temporary material stockpile areas, as applicable.
- Coordinating with the **Engineer** for the off-site reuse excess material at the approved receiving location.

The **Engineer** shall be responsible for the following:

- Periodically observe material encountered during performance of work for evidence of contamination, as described below.

The **Owner** shall be responsible for the following:

- Signing all bills of lading and other receiving facility requirements for excess target material transported from each Project Area (by **Owner** or duly authorized representative).

3.2 Soil Excavation/Soil Disposition

3.2.1 Excavation

Prior to the start of work, the **Contractor** shall prepare a Site Operations Plan in accordance with the project specifications. The Plan shall be approved by the **Engineer** prior to start of work.

Soil excavated to accommodate placement of building foundations, underground utilities, grading, and for other reasons will be segregated as polluted fill and native soils and temporarily stockpiled at the site for later reuse or direct-loaded onto trucks and transported to an approved receiving facility, as required.

During environmental investigations, groundwater was not encountered at depths of planned excess material removal. For the purpose of this SMP, we assume that no dewatering will be required.

3.2.2 Polluted Fill/Soil for Off-Site Reuse

The **Contractor** shall be responsible for communicating and coordinating with the **Owner** and **Construction Manager** the onsite reuse and/or offsite reuse/disposal of excess material at an approved receiving facility. **Contractor** shall coordinate with **Owner** to obtain generator signatures on bills of lading for transport of the material for offsite reuse/disposal.

Contractor will be responsible for assuring that soil to be reused/disposed off-site contains no free-draining liquid.

Contractor shall inform **Engineer** if the amount of polluted fill/soil may exceed initial estimates so that the **Engineer** can collect additional soil samples, if necessary. If excavated soil will be loaded directly into the trucks for off-site reuse, then soil samples may need to be collected and analyzed prior to the start of excavation in order to meet the testing requirements of the project (typically one sample every 500 cubic yards).

If visual observations of soil during excavation indicate the presence of unidentifiable physical or chemical characteristics, the **Engineer** shall indicate to the **Contractor** if soil samples are to be collected and analyzed. If additional soil analysis is warranted, waste characterization soil samples will be submitted to the laboratory by the **Engineer** for the analyses required by the disposal facility.

If additional soil analysis is warranted, waste characterization soil samples will be submitted to the laboratory by the **Engineer** for the following analyses at a minimum:

- VOCs by USEPA Method 8260
- Semi-VOCs by USEPA Method 8270
- ETPH by Connecticut's ETPH Method
- RCRA 8 Metals by USEPA Method Series 6000/7000
- PCBs by USEPA Method 8082

3.2.3 Imported Soil

As applicable, soil proposed to be imported shall be used at the site only after review of the results of chemical testing and approval by the **Engineer**. Soil samples will be submitted to a Connecticut-certified laboratory by the **Contractor** for the following analyses to characterize the off-site import material:

- VOCs by USEPA Method 8260
- Semi-VOCs by USEPA Method 8270
- ETPH by Connecticut's ETPH Method
- RCRA 8 Metals by USEPA Method Series 6000/7000
- PCBs by USEPA Method 8082
- Pesticides by USEPA Method 8081

Contractor must identify the source of the soil to be imported onto the site and collect one sample every 500 cubic yards of backfill material for analysis. This frequency may be reduced at the discretion of the **Engineer**. Soil must not contain concentrations of any constituent that exceed either the background concentration at the site or the ResDEC, whichever is lower, and be acceptable to the **Engineer**. No foreign material (including asphalt) is acceptable.

3.2.5 Regulatory Compliance

The **Contractor** shall conduct all work in accordance with the appropriate and relevant federal, state and local codes, ordinances, and regulations, related to worker health & safety, transportation of regulated or hazardous wastes, environmental law, and obtain all necessary permits. The **Contractor** is required to obtain local permits in order to initiate the work.

3.3 Execution

3.3.1 Excavated Material Classification

Following excavation of on-site materials, it is the responsibility of the **Contractor** to coordinate with the **Engineer** to identify the limits of material that is not suitable for the reuse as backfill at the project site. Shallow soils outside the pre-characterization area shall be observed for physical and chemical characteristics of concern, otherwise the material is assumed to be reusable at the site as backfill.

It is the responsibility of the **Contractor** to coordinate with the **Engineer** to verify the in-place material in accordance with the classifications listed below. Soil across the site is presumed to be polluted fill or native soil based on analytical data collected during our subsurface investigations.

- **Uncontaminated/Native Soils:** These soils are “clean” material, with no visual or olfactory evidence of contamination and with chemical test results consistent with natively occurring background levels.
- **Polluted Fill:** These are soil that contain pollutants at concentrations above background levels as determined by the **Engineer** and that meet the requirements of the receiving facility.

3.3.2 Excavation

During excavation, the **Contractor** shall be responsible for performing the following specific tasks:

- Observe excavation for visual or olfactory evidence of contamination, such as certain physical objects, staining, odors, etc. If contamination is suspected in an area or of a type not previously documented, suspend excavation and contact the **Engineer**. The **Engineer** will periodically monitor excavations and assist the **Contractor** with segregation of soil, as necessary.
- Do not mix polluted/natural material with suspect polluted material while excavating, handling, or stockpiling.
- Employ control measures to minimize airborne dust.
- Periodically inspect equipment for leakage of fluids to verify that work areas are not being contaminated by equipment and that off-site areas are not being contaminated during waste transport.
- Load soil directly onto trucks for transport to an approved offsite receiving facility or stockpile at a designated temporary staging location, depending on circumstances.

3.3.3 Material Handling Requirements

3.3.3.1 General Provisions

Where applicable, the **Contractor** shall observe the following general provisions, which may be subject to alterations based on conditions encountered during performance of the work:

- Direct-load and transport excavated material to a designated temporary stockpile area or the approved receiving facility.
- Maintain project documentation with accurate records of environmental conditions within the project, material tracking and bills of lading, and receiving facility certification (as required).
- Segregate excavated material from suspect polluted based on visual observations performed during excavation, as applicable. Submit a complete copy of documentation to the **Engineer** at the completion of the project.

3.3.3.2 Best Management Practices

Contractor shall observe best management practices with the following provisions when transporting excavated material:

- Load material within the project limits and sweep project debris from off-site streets daily.
- Cover all trucks leaving the site and prevent debris from spilling from trucks or being tracked off-site.
- Transport material off-site using the appropriate licensed hauler as applicable under Federal and State DOT regulations.

3.3.4 Temporary Stockpile Area Documentation

As applicable, **Contractor** shall maintain project documentation, including site operation log of stockpile total volumes, environmental conditions at the stockpile area, material tracking, transportation manifests, and disposal certification. Inspect stockpiles daily during construction and record inspection observations in the log book for submittal to

the **Engineer** at the completion of the project. Complete removal of stockpiles shall avoid removal of underlying soils if not placed on pavement. No stockpile shall remain on-site for a period exceeding 45 days unless the proper documentation is filed with the Department of Energy and Environmental Protection, as described in section 4.1.

Documentation shall include daily field reports and minutes of meetings related to Soil Management. Submit a complete copy of documentation to the **Engineer** at the completion of the project.

3.3.5 Off-Site Reuse of Excavated Materials

When reusing and disposing of excavated polluted fill/soil off-site, **Contractor** shall use the guidelines below.

- **Polluted Fill/Native Soil** - Soils that are known or presumed to meet applicable RSR Criteria, based on past testing results and/or observations, may either be reused on-site as a backfill or transported off-site for reuse at the approved receiving facility.
- **Contractor** and **Engineer** shall determine options for off-site disposal or treatment of polluted material, if encountered, based on chemical testing and physical observations.
- **Contractor** shall dispose of polluted fill/native material only at the approved receiving facility. Uncontrolled off-site reuse of excavated material is prohibited.
- If necessary, the **Engineer** shall arrange for additional sampling and analysis of soil as may be required by the project. The results of chemical testing shall be provided to **Contractor** and **Owner** for review.
- **Contractor** shall provide **Engineer** copies of Bills of Lading, waste manifests, and any other documentation of off-site disposal requested by **Owner** and **Engineer**.

4.0 Site Excavation Work Approvals/Documentation

4.1 *Temporary Soil Staging Area*

If necessary, **Contractor** shall designate a temporary soil staging area to **Owner** and be responsible for local or state approvals, if necessary, and maintain documentation of the soils management through and until removal of entire stockpile. Stockpiling of polluted soil for periods exceeding 45 days typically requires registration under a Connecticut General Permit program.

4.2 *Approval for Off-Site Reuse of Polluted Fill/Soil at Other Facilities*

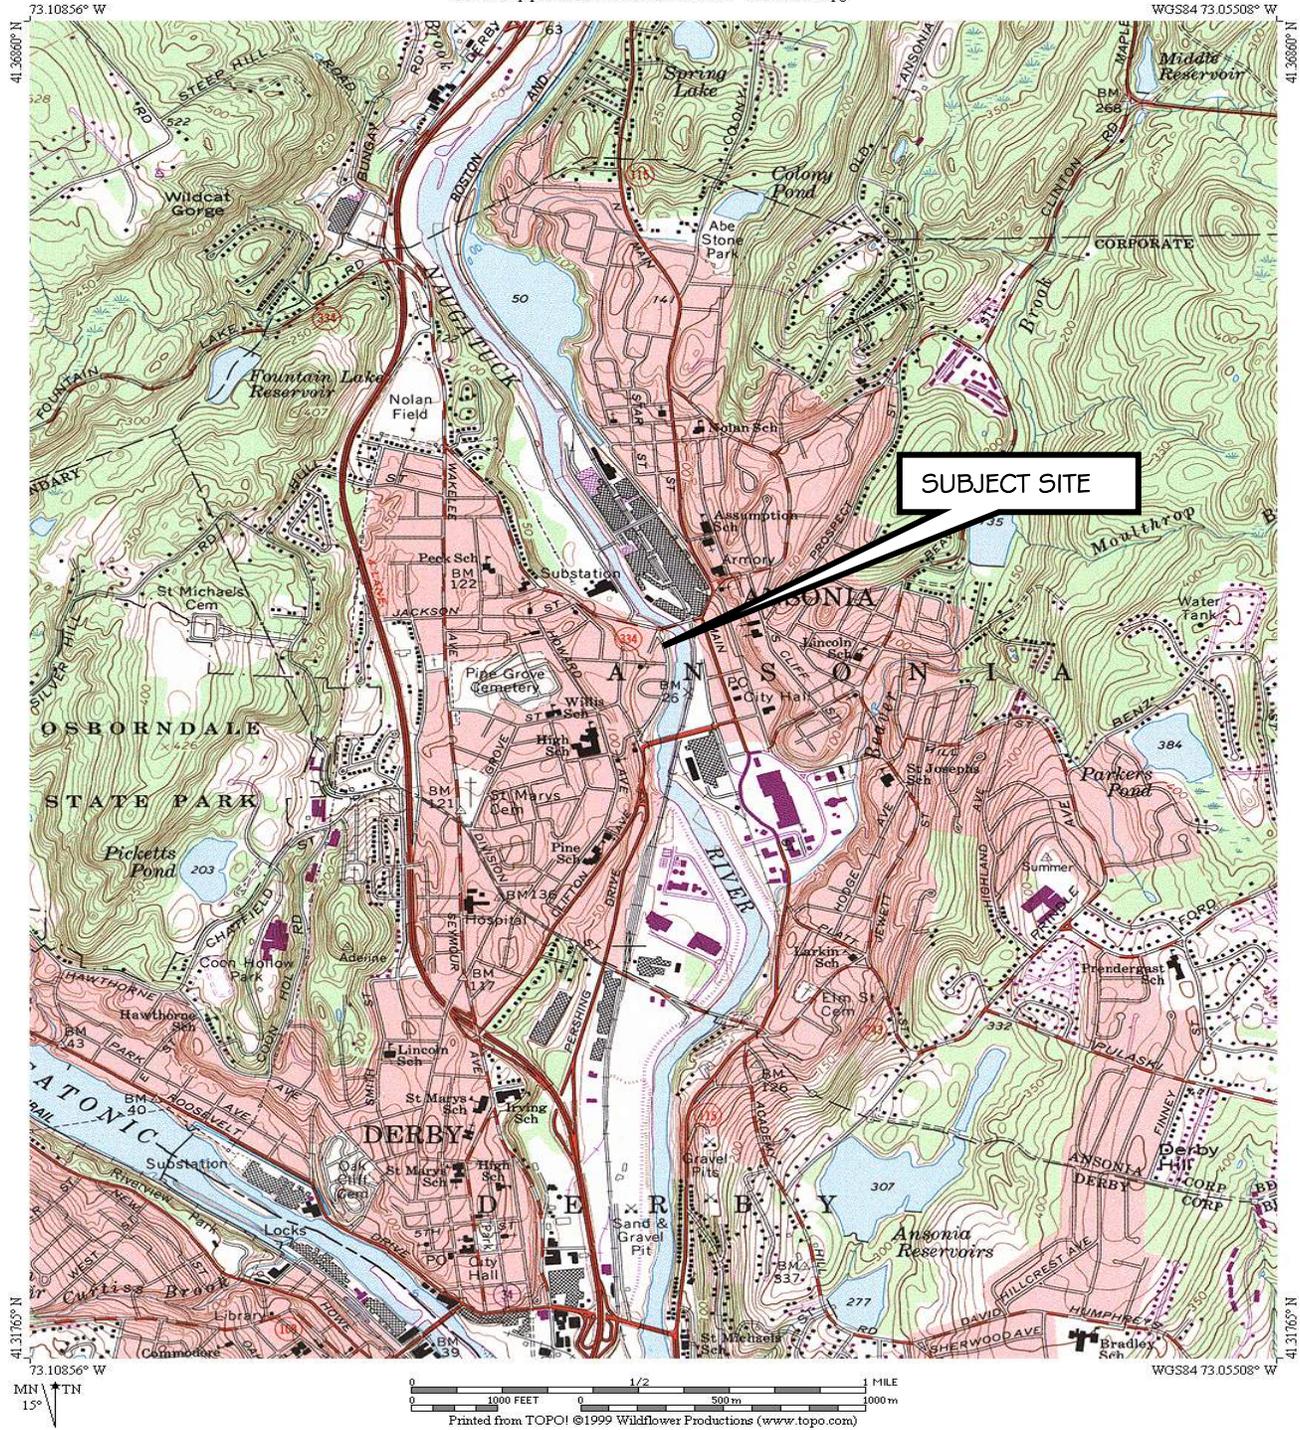

If an approved receiving facility cannot accept the targeted polluted fill/soil, **Engineer** shall assist the **Contractor** with the preparation and submittal of applications and appropriate attachments to other potential disposal facilities prior to the **Contractor's** transporting of excess excavated soils. This documentation shall be provided under separate cover.

5.0 Anticipated Project Schedule

To be coordinated with the **Owner, Construction Manager** and **General Contractor**.

REMARKS

- 1 - Augered to 10'
- 2 - Auger Refusal at 10.5' (Offset 5')
- 3 - Boring backfilled with auger spoils
- 4 - Offset 5' and hit Auger Refusal at 9.5' (GZ-14B)

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

REMARKS

1 - Grinding on augers at approximately 5'-8'
 2 - Monitoring well installed at 28'. 10' of 2" PVC, 10-slot PVC well screen set at approximately 28' below grade. Filter sand placed in annulus around well from 17'-28'. Bentonite seal from 15'-17' below grade. Auger spoils from 17' to ground surface

Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

 1 - Possible boulder at approximately 11 ft.
 2 - Grinding from approximately 11.5 ft. to 15 ft.
 3 - Monitoring well installed at 29 ft. below existing grade. 10' of 1" PVC, 10-slotted well screen set at approximately 29' below grade. Filter sand placed in annulus around well from 18'-29'. Bentonite seal from 16'-18' below grade. Auger spoils backfilled from 16' to existing grade.

Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Exploration No.:
GZ-21

REMARKS

- 1 - Grinding on auger from approximately 3 ft. to 7 ft.
- 2 - Grinding on auger from approximately 15 ft. to 19 ft.
- 3 - Stratified sands and gravel in SS-7
- 4 - Auger refusal at 20 ft.
- 5 - Boring backfilled with auger spoils

See Log Key for explanation of sample description and identification procedures. Stratification lines represent approximate boundaries between soil and bedrock types. Actual transitions may be gradual. Water level readings have been made at the times and under the conditions stated. Fluctuations of groundwater may occur due to other factors than those present at the times the measurements were made.

Sincerely,

David Ditta
Laboratory Director

Report Comments:

Sample Result Flags:

- E- The result is estimated, above the calibration range.
- H- The surrogate recovery is above the control limits.
- L- The surrogate recovery is below the control limits.
- B- The compound was detected in the laboratory blank.
- P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
- D- The RPD between the sample and the sample duplicate is high. Sample Homogeneity may be a problem.
- + - The Surrogate was diluted out.
- *C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
- *C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
- *F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
- *F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
- I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at the specified detection limit

All analyses were performed in house unless a Reference Laboratory is listed.

Samples will be disposed of 30 days after the report date.

80 Lupes Drive

Quality Control Definitions and Abbreviations

Internal Standard (IS)	An Analyte added to each sample or sample extract. An internal standard is used to monitor retention time, calculate relative response, and quantify analytes of interest.
Surrogate Recovery	The % recovery for non-tarar organic compounds that are spiked into all samples. Used to determine method performance.
Continuing Calibration Batch	An analytical standard analyzed with each set of samples to verify initial calibration of the system. Samples that are analyzed together with the same method, sequence and lot of reagents within the same time period.
ND	Not detected
RL	Reporting Limit
Dilution	Multiplier added to detection levels (MDL) and/or sample results due to interferences and/or high concentration of target compounds.
Duplicate Result	Result from the duplicate analysis of a sample. Amount of analyte found in a sample.
Spike Level	Amount of analyte added to a sample
Matrix Spike Result	Amount of analyte found including amount that was spiked.
Matrix Spike Dup	Amount of analyte foun in duplicate spikes including amount that was spike.
Matrix Spike % Recovery	% Recovery of spiked amount in sample.
Matrix Spike Dup % Recovery	% Recovery of spiked duplicate amount in sample.
RPD	Relative percent difference between Matrix Spike and Matrix Spike Duplicate.
Blank	Method Blank that has been taken through all steps of the analysis.
LCS % Recovery	Laboratory Control Sample percent recovery. The amount of analyte recovered from a fortified sample.
Recovery Limits	A range within which specified measurements results must fall to be compliant.
CC	Calibration Verification

Flags:

- H- Recovery is above the control limits
- L- Recovery is below the control limits
- B- Compound detected in the Blank
- P- RPD of dual column results exceeds 40%
- #- Sample result too high for accurate spike recovery.

Connecticut Laboratory Certification PH0116
Massachussets Laboratory Certification M-CT903

New York Certification 11982
Rhode Island Certification 199

REASONABLE CONFIDENCE PROTOCOL LABORATORY ANALYSIS QA/QC CERTIFICATION FORM

Laboratory Name: Complete Environmental Testing, Inc.

Client: Payne Environmental

Project Location: Riverside Apts, Ansonia

Project Number: 15.127/001

Laboratory Sample ID(s):

6010276-01 thru 6010276-19

Sample Date(s):

01/06/2016, 01/12/2016, 01/13/2016, 01/14/2016

List RCP Methods Used:

EPA 6010C, EPA 7471B, EPA 8270D

CET #: 6010276

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CTDEP method-specific Reasonable Confidence Protocol documents?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
1A	Were the method specified preservation and holding time requirements met?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
1B	VPH and EPH Methods only: Was the VPH and EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
3	Were samples received at an appropriate temperature (< 6 degrees C.)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
4	Were all QA/QC performance criteria specified in the CT DEP Reasonable Confidence Protocol documents achieved?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
5a	a) Were reporting limits specified or referenced on the chain-of-custody?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
5b	b) Were these reporting limits met?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
7	Are project specific matrix spikes and laboratory duplicates included with this data set?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."

This form may not be altered and all questions must be answered.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete.

Authorized Signature:

Position: Laboratory Director

Printed Name: David Ditta

Date: 01/25/2016

Name of Laboratory: Complete Environmental Testing, Inc.

This certification form is to be used for RCP methods only.

RCP Case Narrative

4- See Exceptions Report Below

6- The client requested a subset of the RCP metals and CT 8270 list.

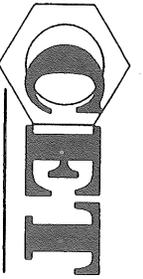

4- Exceptions Report

Analytical Report

CET# 6020016

Report Date: February 03, 2016
Project: Riverside Apts, Ansonia
Project Number: 15.127/001

Connecticut Laboratory Certificate: PH 0116
Massachusetts laboratory Certificate: M-CT903

New York Certification: 11982
Rhode Island Certification: 199

CET # : 6020016

Project: Riverside Apts, Ansonia

Project Number: 15.127/001

SAMPLE SUMMARY

The sample(s) were received at 4.1°C.

This report contains analytical data associated with following samples only.

Sample ID	Laboratory ID	Matrix	Collection Date/Time	Receipt Date
MW-1	6020016-01	Water	1/31/2016 8:45	02/01/2016
MW-2	6020016-02	Water	1/31/2016 9:15	02/01/2016
MW-3	6020016-03	Water	1/31/2016 8:55	02/01/2016
MW-4	6020016-04	Water	1/31/2016 9:00	02/01/2016

Sincerely,

David Ditta
Laboratory Director

Report Comments:

Sample Result Flags:

- E- The result is estimated, above the calibration range.
- H- The surrogate recovery is above the control limits.
- L- The surrogate recovery is below the control limits.
- B- The compound was detected in the laboratory blank.
- P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
- D- The RPD between the sample and the sample duplicate is high. Sample Homogeneity may be a problem.
- + - The Surrogate was diluted out.
- *C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
- *C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
- *F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
- *F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
- I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at the specified detection limit

All analyses were performed in house unless a Reference Laboratory is listed.

Samples will be disposed of 30 days after the report date.

Quality Control Definitions and Abbreviations

Internal Standard (IS)	An Analyte added to each sample or sample extract. An internal standard is used to monitor retention time, calculate relative response, and quantify analytes of interest.
Surrogate Recovery	The % recovery for non-tarer organic compounds that are spiked into all samples. Used to determine method performance.
Continuing Calibration Batch	An analytical standard analyzed with each set of samples to verify initial calibration of the system. Samples that are analyzed together with the same method, sequence and lot of reagents within the same time period.
ND	Not detected
RL	Reporting Limit
Dilution	Multiplier added to detection levels (MDL) and/or sample results due to interferences and/or high concentration of target compounds.
Duplicate Result	Result from the duplicate analysis of a sample. Amount of analyte found in a sample.
Spike Level	Amount of analyte added to a sample
Matrix Spike Result	Amount of analyte found including amount that was spiked.
Matrix Spike Dup	Amount of analyte foun in duplicate spikes including amount that was spike.
Matrix Spike % Recovery	% Recovery of spiked amount in sample.
Matrix Spike Dup % Recovery	% Recovery of spiked duplicate amount in sample.
RPD	Relative percent difference between Matrix Spike and Matrix Spike Duplicate.
Blank	Method Blank that has been taken through all steps of the analysis.
LCS % Recovery	Laboratory Control Sample percent recovery. The amount of analyte recovered from a fortified sample.
Recovery Limits	A range within which specified measurements results must fall to be compliant.
CC	Calibration Verification

- Flags:
- H- Recovery is above the control limits
 - L- Recovery is below the control limits
 - B- Compound detected in the Blank
 - P- RPD of dual column results exceeds 40%
 - #- Sample result too high for accurate spike recovery.

REASONABLE CONFIDENCE PROTOCOL LABORATORY ANALYSIS QA/QC CERTIFICATION FORM

Laboratory Name: Complete Environmental Testing, Inc.

Client: Payne Environmental

Project Location: Riverside Apts, Ansonia

Project Number: 15.127/001

Laboratory Sample ID(s):
6020016-01 thru 6020016-05

Sample Date(s):
01/31/2016

List RCP Methods Used:
EPA 8260C

CET #: 6020016

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CTDEP method-specific Reasonable Confidence Protocol documents?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
1A	Were the method specified preservation and holding time requirements met?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
1B	VPH and EPH Methods only: Was the VPH and EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
3	Were samples received at an appropriate temperature (< 6 degrees C.)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
4	Were all QA/QC performance criteria specified in the CT DEP Reasonable Confidence Protocol documents achieved?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
5a	a) Were reporting limits specified or referenced on the chain-of-custody?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
5b	b) Were these reporting limits met?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
7	Are project specific matrix spikes and laboratory duplicates included with this data set?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."
This form may not be altered and all questions must be answered.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete.

Authorized Signature:

Position: Laboratory Director

Printed Name: David Ditta

Date: 02/03/2016

Name of Laboratory: Complete Environmental Testing, Inc.

This certification form is to be used for RCP methods only.

I. INTRODUCTION

1.1 Purpose & Scope

Payne Environmental LLC (PAYNE) was retained by the Ansonia Housing Authority (AHA) to complete a Phase III Environmental Site Assessment (ESA) for the southern portion of the Riverside Apartments located on Olson Drive, Ansonia, Connecticut (the “Site”). The purpose of the Phase III was to further investigate and delineate previously identified release areas.

The Site location is depicted in Figure 1. A site plan is included as Figure 2. The primary objectives of this Phase III ESA were to conduct investigations to define the nature and extent of imported fill material and to provide a basis for making critical decisions regarding conditions that do not comply with the Remediation Standard Regulations (RSRs). The conceptual site model (CSM) will be refined to reflect the fate and transport model associated with previously identified import fill. or strategies for achieving compliance with the RSRs.

The project objectives were achieved by conducting the following site activities:

- Pre-Drilling Tasks & Utility Mark-out, including development of a site-specific Health & Safety Plan (HASP)
- Supplemental Hazardous Materials Testing – collection and analysis of twenty (20) caulk/sealant samples for subsequent analysis for PCBs utilizing the soxhlet method;
- Development of a Soil Sampling and Analysis Plan (SSAP);
- Installation of forty-six (46) surficial soil borings;
- Installation of up to nineteen (19) soil borings to depths up to 12-15 feet below grade utilizing direct-push technology;
- Installation of five (5) deep soil borings utilizing hollow stem auger technology for the subsequent installation of five (5) groundwater monitoring wells;
- Laboratory analysis of soil and groundwater samples for the quantity of COCs listed in the RFP; and
- Preparation of a Phase III ESA Report.

1.2 Site Description

The study site includes the southern parcel and improvements of the Riverside Apartments located at Olson Drive in the City of Ansonia, New Haven County, Connecticut at 41°20'35.34" N latitude and 73°04'54.77" W longitude. This portion of the site is identified in the Ansonia Assessor's Office as parcel 031/05 & 06. The approximately 5-acre parcel is improved with five (5) apartment buildings, one (1)

Service Building and one (1) Community Center. Two (2) apartment buildings were demolished in 2009. Based on historic mapping, it appears that Jersey Street was formerly located between High Street and Lester Street, and the area previously consisted of several smaller residential structures and commercial structures prior to the development of Riverside Apartments. The historical structures were reportedly destroyed in 1955 during the historic Naugatuck River flood.

The residential apartment buildings and maintenance garage were reportedly constructed circa 1960 and the community center building in 1994.

Site utilities are typically fed via underground conduits through a typical central processing plant originating in Building #6, which houses the main boiler room.

- Electric– electrical runs underground. Electrical transformers are located in a vault at the northeast corner of the boiler room building area associated with Building #6.
- Natural Gas– Natural gas is provided to Bldg #6 for three (3) large boilers.
- Sanitary Sewer and Public Water –the Site utilizes municipal sewer and water. The water main enters Building #6, which then supplies water to the other buildings via underground conduits.
- Storm Sewer– Catch basins are located throughout the Site in driveway access areas and parking lot areas and are reportedly connected to a municipal storm water system.

Based on the results of previously performed Phase I ESAs, it was concluded that the Site did not meet the definition of an “establishment” as defined by the Connecticut Transfer Act. It was recommended that legal counsel knowledgeable in environmental law review the Transfer Act and it’s applicability to the Site.

1.3 Project Background

The site has been previously studied, including Phase I ESAs conducted by GeoQuest, Inc. (August 2005), PAYNE (April 2009) and DTC (Sept. 2011). DTC also conducted a Phase II ESA in January 2012.

Based on their completed Phase I ESA, DTC identified and subsequently investigated seven (7) areas of concern (AOCs) at the subject site, as described below:

AOC#	Description	Release Detected
1	Imported Fill Material	Yes
2	Former 24,000-Gallon Heating Oil USTs	No
3	Floor Drains - Boiler Room	No
4	Floor Drains – Service Building	No
5	Existing Transformers	No
6	Hydraulic Trash Compactors	No
7	Former Auto Repair/Wrecking Facilities	No

Based on the findings of the Phase II ESA, DTC concluded that one (1) release area (RA1) was identified and was likely due to sitewide distribution of fill material of unknown quality. DTC recommended the design and implementation of a Phase III ESA to further delineate the degree and extent of contamination associated with the fill material. Constituents of concern (COCs) identified include total extractable petroleum hydrocarbons (ETPH), polyacyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs) and metals (arsenic and lead).

1.4 Regulatory Criteria

Analytical results for the soil and groundwater samples obtained during this investigation were compared to criteria established in the RSRs. These cleanup criteria are used herein as guidance and a standard of care to assess areas of potential on-site contamination and to provide information with which to validate or modify the conceptual site model for the property, which in turn provides for an understanding of the potential risk of impact to human health or the environment from site conditions.

This objective is addressed in part by comparing the results of soil and groundwater sample analysis with applicable RSR criteria. The RSRs provide different remediation target criteria for constituents based primarily on the variables of (1) groundwater classification beneath and in the area of the property, and (2) whether the property is dedicated to residential or industrial/commercial use.

Groundwater in the general vicinity of the subject site is classified by CTDEEP as GA groundwater. The GA classification is defined by CTDEEP as groundwater within the area of private water supply wells or an area with the potential to provide water to public or private supply wells. The CTDEEP presumes that groundwater in a GA area is, at a minimum, suitable for drinking or other domestic uses without treatment.

Section 22a-133k-2 of the RSRs establishes two (2) criteria for soil:

- Direct Exposure Criteria (DEC) that seek to protect humans from potential risks associated with direct exposure to contaminated soils; and

- Pollutant Mobility Criteria (PMC) that are designed to protect groundwater from contaminants that may leach from soil to the groundwater.

Section 22a-133k-3 of the RSRs establishes three (3) criteria for groundwater in GA-classified areas:

- Surface Water Protection Criteria (SWPC) that seek to ensure that polluted groundwater does not adversely affect surface water quality or prevent the attainment of surface water quality criteria;
- Groundwater Volatilization Criteria (GWVC) that are designed to ensure that human health is not adversely affected from inhalation of volatile pollutants that have entered or may enter a building or structure as a result of volatile contaminants in the underlying groundwater; and
- Groundwater Protection Criteria (GWPC) that seek to protect and preserve groundwater as a natural resource, to protect existing uses of groundwater, and to prevent further degradation of groundwater quality.

Soil and groundwater sample results are compared to the current RSRs. The RSRs provide a set of criteria that soil and groundwater characteristics must meet for a given land use or for a groundwater or surface water classification. If any of the criteria are not met, soil and/or groundwater remediation may be required at the Site to achieve compliance with the appropriate criteria levels. The applicable criteria utilized for the Site include:

- Residential Direct Exposure Criteria (Res. DEC) for soil;
- Pollutant Mobility Criteria for soil located in a GA groundwater area (GA-PMC);
- Surface Water Protection Criteria (SWPC) for groundwater;
- Residential Groundwater Volatilization Criteria (Res. GWVC) for groundwater; and
- Groundwater Protection Criteria (GWPC).

This investigation assumes the less stringent I/C DEC and I/C GWVC are not applicable to the Site.

1.5 Constituents of Concern

Constituents of Concern (COCs) for the Site are related to historic imported fill and include: volatile organic compounds (VOCs – groundwater only), semi-volatile organic compounds (SVOCs), metals (lead and arsenic), polychlorinated biphenyls (PCBs) and extractable total petroleum hydrocarbons (ETPH).

II. SITE GEOLOGY AND HYDROGEOLOGY

2.1 Topography

The Site is located at an elevation of approximately 35 feet above sea level (National Geodetic Vertical Datum of 1929). The topography of the Site generally slopes downward from the west to the east towards Olson Drive and the Naugatuck River.

2.2 Bedrock Geology

The Site is located within the Iapetus, Connecticut Valley Synclinorium. The subsurface geology at the subject Site is reported to be gray to spotted, medium to coarse grained, foliated gneiss. Bedrock was not encountered during the investigation.

2.3 Surficial Geology

Soils in this area generally are classified as urban land. This map unit consists of areas where urban structures cover more than 85 percent of the surface and the map unit is predominantly artificial fill and Udorthents, which are well drained to excessively drained soils mainly near urban areas.

Based on the findings of the Phase III study, the site is overlain with two (2) distinct fill layers. The upper layer, generally observed to range in 2-12 feet in thickness, consists of a light-medium brown sandy fill layer with varying percentages of silt and gravel. This upper fill layer is underlain with a darker sandy fill material, consisting of ash, coal, brick, glass, asphalt, plastic and concrete. The thickness of this fill layer ranges from 2-8 feet.

Natural brown fine-to-coarse sand with cobbles and gravel are encountered below the fill layers, at depths typically ranging from 6-20 feet below ground surface.

2.4 Groundwater Classification and Flow Direction

Groundwater in the general vicinity of the subject site is classified by CTDEEP as GA groundwater. The GA classification is defined by CTDEEP as groundwater within the area of private water supply wells or an area with the potential to provide water to public or private supply wells. The CTDEEP presumes that groundwater in a GA area is, at a minimum, suitable for drinking or other domestic uses without treatment.

The groundwater flow direction based on surface topography and monitoring well data, is inferred to be generally east/southeast towards the Naugatuck River, which is located within 100 feet of the Site to the east. Depth to groundwater at the Site was observed to be approximately 20 feet below ground surface.

2.5 Surface Water Classification & Flow Direction

The Site is located in the Naugatuck River Sub Regional Basin of the Naugatuck Complex, which is tributary to the Housatonic. The nearest natural surface The water body is the Naugatuck River, essentially abutting the property easterly (Figure 1).

According to the CTDEEP, the surface water quality of the Naugatuck River classified as B. Class B surface waters are not potential drinking water supplies; however, designated uses include fish and wildlife habitat, recreational uses, agricultural and industrial supply, and other legitimate uses including navigation.

III. PHASE III INVESTIGATION ACTIVITIES

3.1 Overview

Subsurface investigations were conducted at to evaluate the degree and extent of artificial fill and included the installation of 19 deep soil borings, 46 shallow soil samples and the subsequent installation of five (5) groundwater monitoring wells. Sample locations are depicted in Figures 3 and 4. In addition, twenty (20) caulk/sealant samples were collected from exterior areas of the site structures to evaluate the potential for polychlorinated biphenyls.

3.2 Pre-Exploration Activities

Pre-exploration activities included one site inspection and a request to Call-Before-You-Dig (#2012-3202468) for underground utility clearance. Clearance was given for water, sewer, electric, natural gas, electric, cable and telephone utilities. Boring locations were marked prior to the start of drilling activities on the day of the sampling and were determined in the field by measuring from fixed locations.

3.3 Drilling & Monitoring Well Installation

In order to evaluate the artificial fill layer as part of this Phase III investigation, the following explorations were conducted at the Site:

- Nineteen (19) soil borings (SB-15 through SB-33)
- Forty-six (46) shallow soil borings (HA-1 through HA-46)
- Five (5) groundwater monitoring wells (MW-1 through MW-5)

Drilling and monitoring well installation were performed on August 16, 2012 and August 17, 2012. Shallow soil samples were collected on August 22, 2012 and August 25, 2012.

Boring locations were marked prior to the start of drilling activities. Figures 3, 4 and 5 present soil boring, sample location and groundwater monitoring well locations, respectively. Sample locations were determined in the field by measuring from fixed locations.

There was no deviation from standard soil boring and monitoring well installation protocols. Soil borings were completed using direct-push techniques for soil collection and monitoring well installation. Soil was collected in 4-foot long “macrocore” sample tubes equipped with acrylic liners. This allowed the PAYNE geologists to describe

relatively undisturbed soil core, screen the soil, and collect soil samples for laboratory analysis from each direct-push boring. Monitoring wells were installed using a hollow-stem auger drill rig.

Shallow soil samples were collected utilizing standard hand-auger techniques. Caulk/sealants samples were collected utilizing standard sampling tools (chisels, hammers, utility knives, etc...).

All soil boring, soil sampling and caulk/sealant sampling activities and monitoring well installations were performed using clean and decontaminated equipment at each location. Five (5) soil borings were subsequently converted to groundwater monitoring wells (MW-1 through MW-5). These wells were constructed of two-inch diameter, threaded, flush-jointed, polyvinyl chloride (PVC) well casing with slotted PVC screen (No. 10 screen). The bottom of each well was positioned to intercept the water table to capture any floating product and allow for seasonal fluctuations in water levels.

The annular space surrounding the well screen was filled with No. 1 Ottawa sand to an elevation one to two feet above the top of the screen. Above the sand, a bentonite seal was placed to seal the well from formation above. Auger flight cuttings were used to backfill the remainder of the annular space. Finally, a concrete collar was poured around a flush-mounted, protective steel case with a locking cap to secure the well. Subsequent to well installation, each well was developed by drilling personnel to reduce water turbidity and remove other debris that may have entered the wells during installation. Wells were installed to depths of approximately 27-30 feet below grade.

Soil boring logs are provided in Attachment C of this report. Sample parameter lists for groundwater samples and soil samples are summarized in Table 1. Well construction details are summarized in Table 2.

3.4 Groundwater Elevation Survey

PAYNE measured depth to groundwater and surveyed the elevation of monitoring wells on August 22, 2012. The groundwater elevation of the monitoring well was measured from the top of the well casing. Groundwater depth was determined using a groundwater level indicator to determine the depth to groundwater from the top of the monitoring well. A mark was made on the top of the well casing and used as the point of measurement to ensure consistent water level and elevation measurements. Well elevations and locations were surveyed and referenced to elevations of previously installed wells. Groundwater elevations were determined by subtracting the groundwater depth below the ground surface from the well elevation. Data produced was used to produce contour maps of water table elevations and to evaluate horizontal hydraulic gradients within the overburden aquifer.

Depth to groundwater ranged from 19.30 feet below top of casing in MW-1 to 23.00 feet

below top of casing in MW-3. Based upon the gauging data, groundwater in the shallow aquifer appears to be flowing in an easterly/southeasterly direction with an approximate horizontal gradient of 0.004 ft/ft.

PAYNE assumed that the hydraulic conductivity of the sand and fill deposits at the Site is approximately 0.01 cm/sec. Utilizing the hydraulic gradient noted above and approximate porosity of the formation of 0.3, PAYNE calculated a groundwater flow velocity of approximately 1.2 ft. per day.

Well completion details and elevations are provided in Tables 2 and 3, respectively. A groundwater contour plan is depicted on Figure 5 (Attachment A).

3.5 Soil and Caulk/Sealant Sampling & Analysis

Soil samples were collected at continuous intervals for all borings installed. The physical description of soils was recorded at each sample location in addition to relative density of soils using standard penetration methods (ASTM D 1586-76). Soil samples from each four-foot interval at each location were collected in appropriate glassware and immediately placed in a cooler at 4°C. Soil gas vapor screening was conducted to assist in soil sample selection for laboratory analysis.

Soil boring logs are provided in Attachment C. A total of ninety (90) soil samples were submitted for one or more of the following laboratory analyses:

- total extractable petroleum hydrocarbons (CTDEEP Method)
- polyacyclic aromatic hydrocarbons (Method 8270D)
- lead and arsenic by mass analysis, SPLP (Method 6010C)
- polychlorinated biphenyls (PCBs – Method 8082A)

Caulk/sealant samples were collected from exterior source areas (i.e. window caulk, expansion joints, etc...) on existing structures on August 22 and 25, 2012. Samples were weighed and placed within amber glass containers and subsequently stored on ice prior to transport to the laboratory. Caulk/sealants samples were subsequently analyzed for PCBs utilizing the soxhlet extraction method.

The soil and sealant samples were delivered to Spectrum Analytical, Inc. of Agawam, MA for analysis. Spectrum is a Connecticut State-certified laboratory (CT# PH-0777).

3.6 Groundwater Sampling & Analysis

PAYNE personnel conducted groundwater sampling on August 22, 2012 utilizing low-flow sampling techniques. Prior to sampling, field measurements were made of the

depth to groundwater surface and total depth of each overburden well. The measurement instrument (Solonist Model 101) was decontaminated with deionized, distilled water before introduction into each well.

Following field measurements and well purging, groundwater samples were collected after recording consistent field measurements of pH, conductivity, turbidity, dissolved oxygen and temperature. Field measurements were obtained with a Horiba U-22 water quality meter equipped with a Solonist U-22 flow cell.

A total of five (5) unfiltered groundwater samples were collected, stored in laboratory-supplied glassware and submitted for laboratory analysis for volatile organic compounds (USEPA Method 8260C), semi-volatile organic compounds (USEPA Method 8270D), total extractable petroleum hydrocarbons (CTDEEP Method) and total lead/arsenic (Method 6010C). The samples, including trip blank, were delivered to Spectrum Analytical, Inc. of Agawam, MA for analysis. Spectrum is a Connecticut State-certified laboratory (CT# PH-0777).

3.7 Data Quality Objectives

PAYNE reviewed the QA/QC data associated with the laboratory analyses conducted on all soil and groundwater samples. Data validation consisted of evaluating the following items:

- Sample holding times
- Field, trip and/or laboratory blanks
- Field duplicate results
- Laboratory duplicate results
- Matrix spike/matrix spike duplicate results
- Laboratory control spike recoveries
- Surrogate spike recoveries

Although there were instances of non-compliance with the Reasonable Confidence Protocol (RCP), overall these non-compliance issues were minor and few. As a result, the analytical data were deemed adequate and usable for the intended purpose.

IV. PHASE III INVESTIGATION ANALYTICAL RESULTS

4.1 Overview

The Phase III Investigation included the laboratory analysis of 90 soil and 5 groundwater samples and appropriate QA/QC samples. A summary of the Phase III Investigation field activities including: area descriptions, sample dates, methods of investigation, number of sampling locations, depths, media, number of samples, sample identifications, and parameters has been described in the previous sections.

Soil borings and shallow soil samples were installed to define the three-dimensional extent and distribution of substances associated with the fill material located on site. Groundwater samples were collected from on-site monitoring wells. Samples were analyzed for parameters as presented in Table 1.

4.2 Soil Analytical Results

A summary of analytical results for constituents detected in soil is presented in Table 4. Soil analytical results were compared to the Res. DEC and GA-PMC of the RSRs, as described in Section 1.4 above. The laboratory analytical reports for soil samples analyzed during this investigation are included as Attachment D to this report.

The analytical results of the Phase III soil investigation are detailed in the following subsections below.

It is likely that artificial fill was introduced to the Site as part of the site development in the late 1950s and early 1960s, as a result of the great flood of 1955. Soil samples were collected and analyzed for COCs typically associated with artificial fill (total and leachable lead/arsenic, PCBs, PAHs and ETPH).

PAHs

Results of laboratory analyses revealed detected concentrations of PAHs in 19 of 22 samples, with six (6) samples exceeding RDEC and/or GAPMC criteria.

Metals

Results of laboratory analyses revealed detected concentrations of lead in all 90 samples, with 12 samples exceeding RDEC. Results of laboratory analyses revealed detected concentrations of arsenic in 84 of 90 samples, with 12 samples exceeding RDEC.

Four (4) soil samples demonstrating elevated lead and arsenic concentrations by mass analysis were subsequently analyzed by the SPLP method (Method 1312/6000 series)

to evaluate the potential for leaching into groundwater. Samples SB-26 (10-12'), SB-30 (7-9'), B-2/MW-1 (5-7') and HA-25 were selected for subsequent SPLP analysis. Results of SPLP analysis on these samples revealed no detectable leachable lead or arsenic in any of the samples within laboratory method detection limits. The only exception was sample SB-26 (10-12'), which had a detected leachable lead concentration of 0.0382 mg/L, which exceeds the GAPMC of 0.015 mg/L established for lead.

PCBs

Results of laboratory analyses revealed detected concentrations of PCBs in 46 of 90 samples, with two (2) samples (SB-20 and B-3/MW-3) just exceeding RDEC and/or GAPMC criteria.

ETPH

Results of laboratory analyses revealed detected concentrations of ETPH in 28 of 31 samples, with four (4) samples exceeding RDEC and/or GAPMC criteria. Most detections were associated with high molecular weight hydrocarbons, most likely PAHs.

4.3 Caulk/Sealant Analytical Results

A summary of analytical results for constituents detected in sealants is presented in Table 6. The laboratory analytical reports for sealant samples analyzed during this investigation are included as Attachment D to this report.

PCBs were observed above laboratory detection limits in 14 of 20 caulk/sealant samples, typically ranging in concentrations from trace levels to a high of 7 mg/kg. All were observed to be well below the EPA threshold of 50 mg/kg.

4.4 Groundwater Analytical Results

A summary of analytical results for analytes detected in groundwater is presented in Table 5. Groundwater analytical results were compared to the SWPC, RVC and GWPC of the RSRs, as described in Section 1.4 above. The laboratory analytical reports for groundwater samples analyzed during this investigation are included as Attachment D to this report.

Groundwater samples were collected in one sampling event of sampling, conducted on August 22, 2012.

4.4.1 Petroleum Hydrocarbons

ETPH was detected above laboratory reporting limits for 1 of 5 groundwater samples submitted for analysis. ETPH was detected in well sample MW-1 (0.5 mg/L) ETPH detection in this sample exceeds the GWPC of 0.1 mg/L.

According to the laboratory report, the detection is associated with high molecular weight hydrocarbons, most likely PAHs.

4.4.2 Volatile Organic Compounds

VOCs were not detected above laboratory reporting limits in 3 of 5 groundwater samples submitted for analysis. Trace chloroform was detected in wells MW-3 and MW-4 at concentrations of 3.19 ug/L and 9.94 ug/L, respectively. The detection of chloroform in well MW-4 exceeds the GWPC of 6 ug/L.

Detections of chloroform in groundwater in highly urbanized areas is common and likely attributable to infiltration of treated municipal water from leaking water mains.

4.4.3 Metals

Lead and arsenic were not detected in any of the 5 samples submitted for analyses, within laboratory method detection limits.

4.4.4 PAHs

One or more PAH constituents were detected in 4 of 5 groundwater samples, with 3 samples observed to exceed the SWPC of 0.077 mg/L established for phenanthrene.

4.5 Quality Assurance/Quality Control

As noted earlier, no significant data quality issues were noted in the laboratory reports regarding internal laboratory QA/QC, and field/laboratory QA/QC sampling results were found to meet the project data quality objectives. The results of the QA/QC analysis indicate that the samples collected and the associated analytical data is representative of the media sampled, and is useable in supporting conclusions with respect to the nature and extent of the contaminants at the Site.

V. UPDATED CONCEPTUAL SITE MODEL

This section presents a Conceptual Site Model (CSM) based on the results of the site investigation activities and information reviewed to date. The CSM addresses the 10 topics outlined in the CTDEEP Site Characterization Guidance Document.

5.1 Potential Release Areas

There were previously seven (7) AOCs on the Site identified during the completion of a Phase I ESA and Phase II ESA. One (1) release area associated with artificial was subsequently identified, based on the results of those investigations.

This Phase III ESA focused on establishing the three-dimensional extent and distribution of substances within this release area. Results of the investigation revealed that the Site's surficial geology is comprised of two (2) upper fill layers overlying native glacial deposits (see soil cross-section in Figure 9).

The upper layer, generally observed to range in 2-12 feet in thickness, consists of a light-medium brown sandy fill layer with varying percentages of silt and gravel. Most detected COCs within this layer meet the definition of polluted soil and polluted fill; however, detected COCs generally are less than applicable RSR criteria (see Figure 6). The quantity of this fill layer is estimated to be approximately 64,000 cubic yards.

The upper fill layer is underlain with a darker sandy fill material, consisting of ash, coal, brick, glass, asphalt, plastic and concrete. The thickness of this fill layer ranges from 2-8 feet. Most detected COCs within this layer meet the definition of polluted soil and polluted fill; however, detected COCs generally exceed applicable RSR criteria (see Figure 7 and Figure 8). The quantity of this fill layer is estimated to be approximately 48,000 cubic yards.

Natural brown fine-to-coarse sand with cobbles and gravel are encountered below the fill layers, at depths typically ranging from 6-20 feet below ground surface.

5.2 Constituents of Concern

The Site has undergone significant filling since the mid-1950s and back to the time of site development. COCs include ETPH, lead, arsenic, PAHs and PCBs. The distribution of COCs is fairly uniform in each fill layer, with higher concentrations observed in the lower fill layer, which contains a significant quantity of ash and other manmade rubble.

Generally, lead, arsenic, ETPH and PCBs were observed in a significant number of soil samples; however, most were well below respective RSR criteria. PAH detections were primarily observed in the lower ash-containing fill layer.

5.3 Nature of Release

The Release Area associated with the historic fill was likely the result of site development/redevelopment and the need for fill for site grading after the flood of 1955. The sources of fill utilized at the Site were not identified as part of this investigation; however, the nature of contaminants identified in historic fill are typical of those observed in urban fill tested at other sites within Ansonia and other municipalities.

No other Release Areas or Potential Release Areas have been identified at the Site.

5.4 Release Mechanism & Migration Pathway

The presence of elevated metals, PAHs, PCBs and ETPH in urban/historic fill was observed primarily in the lower fill layer. The same COCs are present in the upper polluted fill layer at much lower concentrations.

Results of SPLP soil testing revealed that lead present within the lower fill layer has the potential to leach into the watertable at concentrations exceeding the GWPC. However, the Site is served by municipal supplied water and on-site groundwater is not utilized for human consumption or irrigation.

Results of groundwater testing revealed no detectable lead in groundwater, indicating that actual conditions at the Site revealed that the mobility of lead through the soil may be very limited and, hence, may not reflect laboratory data.

No other Release Areas or Potential Release Areas have been identified at the Site.

5.5 Environmental Setting Into Which Release Occurred

The Site is located at an elevation of approximately 34 feet above sea level (National Geodetic Vertical Datum of 1929). The topography of the Site generally slopes downward from the west to the east.

Groundwater in the general vicinity of the subject Site is classified by CTDEEP as GA groundwater. The GA classification is defined by CTDEEP as groundwater within the area of private water supply wells or an area with the potential to provide water to public or private supply wells. The CTDEEP presumes that groundwater in a GA area is, at a minimum, suitable for drinking or other domestic uses without treatment.

Depth to groundwater ranged from 19.30 feet below top of casing in MW-1 to 23.00 feet below top of casing in MW-3. Based upon the gauging data, groundwater in the shallow aquifer appears to be flowing in an easterly/southeasterly direction with an approximate horizontal gradient of 0.004 ft/ft.

PAYNE assumed that the hydraulic conductivity of the sand and fill deposits at the Site is approximately 0.01 cm/sec. Utilizing the hydraulic gradient noted above and approximate porosity of the formation of 0.3, PAYNE calculated a groundwater flow velocity of approximately 1.2 ft. per day.

Groundwater discharges to the Naugatuck River, located within 100 feet of the Site to the east. Phenanthrene was the only COC detected in groundwater which exceeded its SWPC. The average concentration of phenanthrene in groundwater was observed to be less than two times the SWPC.

5.6 Characteristics of Subsurface Materials

Subsurface materials consisted of artificial sandy fill of varying thickness overlying native glacial deposits. Manmade fragments detected in the deeper fill layer generally consisted of ash, coal, glass, brick, concrete, ceramics and wood. There was no visual evidence of industrial wastes, oils, solvents, etc....

5.7 Stratigraphic Considerations

The Site is located within the lapetus, Connecticut Valley Synclinorium. The subsurface geology at the subject Site is reported to be gray to spotted, medium to coarse grained, foliated gneiss. Bedrock was not encountered during the investigation.

Results of the field investigation revealed that the Site's surficial geology is comprised of two (2) upper fill layers overlying native glacial deposits (see soil cross-section in Figure 9).

The upper layer, generally observed to range in 2-12 feet in thickness, consists of a light-medium brown sandy fill layer with varying percentages of silt and gravel. Most detected COCs within this layer meet the definition of polluted soil and polluted fill; however, detected COCs generally are less than applicable RSR criteria (see Figure 6). The quantity of this fill layer is estimated to be approximately 64,000 cubic yards.

The upper fill layer is underlain with a darker sandy fill material, consisting of ash, coal, brick, glass, asphalt, plastic and concrete. The thickness of this fill layer ranges from 2-8 feet. Most detected COCs within this layer meet the definition of polluted soil and polluted fill; however, detected COCs generally exceed applicable RSR criteria (see Figure 7 and Figure 8). The quantity of this fill layer is estimated to be approximately

48,000 cubic yards.

Natural brown fine-to-coarse sand with cobbles and gravel are encountered below the fill layers, at depths typically ranging from 6-20 feet below ground surface.

5.8 Fate & Transport Characteristics of Substances Released

Metals, PCBs, ETPH and PAH constituents observed in the fill layers are relatively low in concentration. Minor leaching was observed for lead only. Significant COC detections were observed in the lower fill layer, as discussed above.

Groundwater at the site is assumed to predominately flow towards the Naugatuck River located east of the Site.

Based on the data obtained in this investigation, detected COCs are relatively immobile and would only be of a concern if encountered through considerable excavation effort.

5.9 Potential Receptors

Potential receptors associated with any soil contamination at the subject Site are on-site workers that may have cause to disturb the soils. Potential receptors for groundwater contamination include on-site workers who are exposed to the groundwater for any reason, and the Naugatuck River, located downgradient and east of the Site.

5.10 Potential Pathways to Receptors

The following are potential receptor pathways:

- Dermal and ingestion of petroleum, PCB, lead, arsenic and PAH contaminated soil;
- Potential discharge of contaminated groundwater to the Naugatuck River.

VI. FINDINGS AND CONCLUSIONS

6.1 Findings

The study site includes the southern parcel and improvements of the Riverside Apartments located at Olson Drive in the City of Ansonia, New Haven County, Connecticut at 41°20'35.34" N latitude and 73°04'54.77" W longitude. This portion of the site is identified in the Ansonia Assessor's Office as parcel 031/05 & 06. The approximately 5-acre parcel is improved with five (5) apartment buildings, one (1) Service Building and one (1) Community Center. Two (2) apartment buildings were demolished in 2009. The historical structures were reportedly destroyed in 1955 during the historic Naugatuck River flood.

The Site has undergone significant filling since the mid-1950s and back to the time of site development. COCs include ETPH, lead, arsenic, PAHs and PCBs. The distribution of COCs is fairly uniform in each fill layer, with higher concentrations observed in the lower fill layer, which contains a significant quantity of ash and other manmade rubble.

This Phase III ESA focused on establishing the three-dimensional extent and distribution of substances within this release area. Generally, lead, arsenic, ETPH and PCBs were observed in a significant number of soil samples; however, most were well below respective RSR criteria. PAH detections were primarily observed in the lower ash-containing fill layer.

Results of the investigation revealed that the Site's surficial geology is comprised of two (2) upper fill layers overlying native glacial deposits (see soil cross-section in Figure 9).

The upper layer, generally observed to range in 2-12 feet in thickness, consists of a light-medium brown sandy fill layer with varying percentages of silt and gravel. Most detected COCs within this layer meet the definition of polluted soil and polluted fill; however, detected COCs generally are less than applicable RSR criteria (see Figure 6). The quantity of this fill layer is estimated to be approximately 64,000 cubic yards.

The upper fill layer is underlain with a darker sandy fill material, consisting of ash, coal, brick, glass, asphalt, plastic and concrete. The thickness of this fill layer ranges from 2-8 feet. Most detected COCs within this layer meet the definition of polluted soil and polluted fill; however, detected COCs generally exceed applicable RSR criteria (see Figure 7 and Figure 8). The quantity of this fill layer is estimated to be approximately 48,000 cubic yards.

Natural brown fine-to-coarse sand with cobbles and gravel are encountered below the fill layers, at depths typically ranging from 6-20 feet below ground surface.

The presence of elevated metals, PAHs, PCBs and ETPH in urban/historic fill was observed primarily in the lower fill layer. The same COCs are present in the upper polluted fill layer at much lower concentrations.

Results of SPLP soil testing revealed that lead present within the lower fill layer has the potential to leach into the watertable at concentrations exceeding the GWPC. However, the Site is served by municipal supplied water and on-site groundwater is not utilized for human consumption or irrigation.

Results of groundwater testing revealed no detectable lead in groundwater, indicating that actual conditions at the Site revealed that the mobility of lead through the soil may be very limited and, hence, may not reflect laboratory data. Groundwater discharges to the Naugatuck River, located within 100 feet of the Site to the east. Phenanthrene was the only COC detected in groundwater which exceeded it's SWPC. The average concentration of phenanthrene in groundwater was observed to be less than two times the SWPC.

No significant PCB detections were observed in caulk/sealant samples collected from several exterior building components. All were observed to be well below the EPA threshold of 50 mg/kg, but will have to be address at the state level if the buildings undergo demolition.

6.2 Conclusions

The data from Phase III testing indicated that petroleum hydrocarbons, lead, arsenic, PCBs and PAHs were present in deeper fill materials at concentrations above applicable RSR criteria.

Remediation of the fill areas is not warranted at this time. If these areas are to be disturbed in the future (i.e. building demolition, site development, grading, excavation, etc...) then appropriate measures should be developed in the form of a Remedial Action Plan with subsequent implementation prior to disturbing these soils.

Based on planned redevelopment of the Site, a Remedial Action Plan will be developed under separate cover which will address potential remedial options and subsequent costs associated with each remedy.

VII. LIMITATIONS

1. The observations described in this report were made under the conditions stated herein. The conclusions presented in this report were based solely upon the services described herein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.
2. In preparing this report, PAYNE as relied on certain information provided by state and local officials and other parties referenced herein, and on information contained in the files of state and/or local agencies available to us at the time of the site assessment. Although there may have been some degree of overlap in the information provided by these various sources, we did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment.
3. Should additional information on environmental conditions at the site, which is not contained in the report, be obtained, such information should be brought to PAYNE's attention. We will evaluate such information and, on basis of our evaluation, may modify the conclusions stated in this report.
4. Observations were made of the site and of the exterior of the structures on the site as indicated within the report. Where access to portions of the site or to the structures on the site was unavailable or limited, PAYNE renders no opinion as to the presence of hazardous materials or oil, or to the presence of indirect evidence relating to hazardous materials or oil in that portion of the site or structure. In addition, PAYNE renders no opinion as to the presence of hazardous materials or oil, or the presence of indirect evidence relating to hazardous materials or oil where direct observation of the interior walls, floor or ceiling of the structure was obstructed by objects or coverings on or over these surfaces.
5. Unless otherwise specified in the report, PAYNE did not perform testing or analyses to determine the presence or concentration of asbestos, lead paint, polychlorinated biphenyls (PCBs), radon or other naturally occurring materials at the site or in the environment at the site.
6. No specific attempt was made to check the compliance of present or past owners or operators of the site with federal, state or local laws and regulations, environmental or otherwise.
7. The conclusions and recommendations described in this report are based in part on the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further investigation and/or

remediation is initiated. If variations or other latent conditions then appear evident, it will be necessary to re-evaluate the conclusions and recommendations of this report.

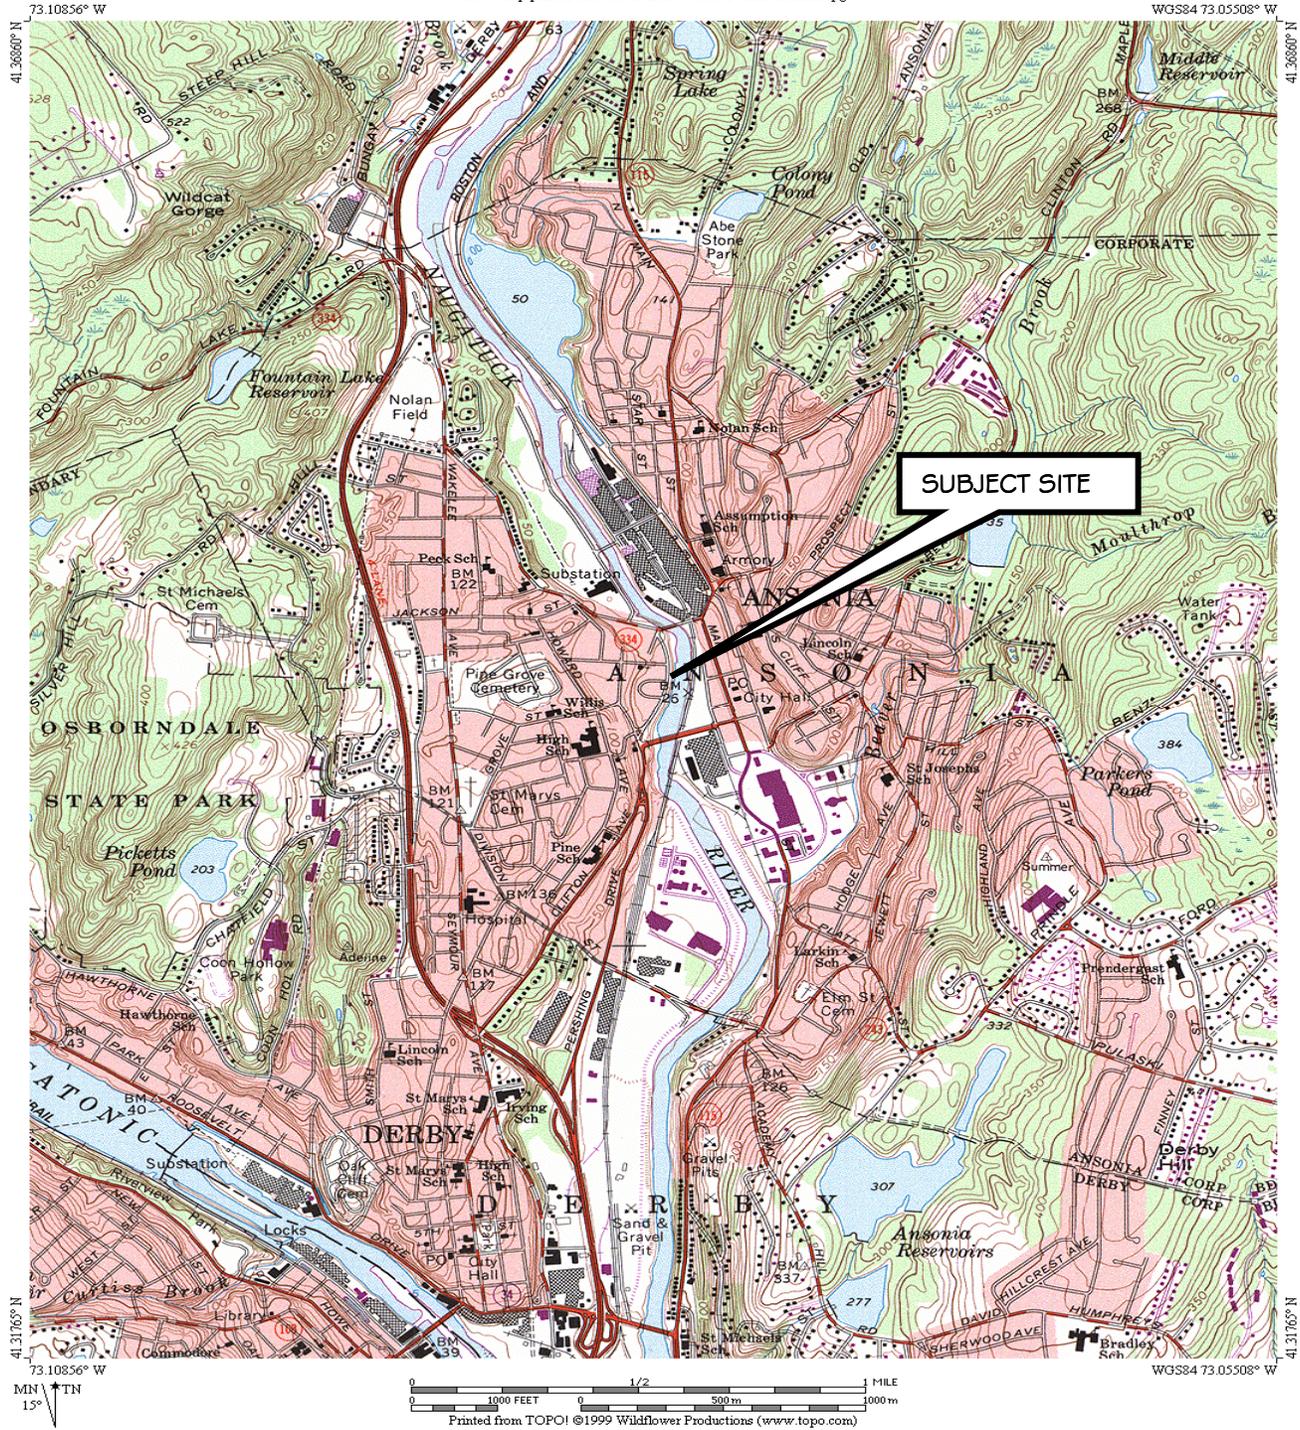

8. Water level observations have been made in the monitoring wells at times and under conditions stated within the text of the report and indicated on exploration logs. Note that fluctuations in the level of the groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time observations were made.
9. Quantitative laboratory analyses were performed as part of the investigation as noted within this report. The analyses were performed for specific parameters that were selected during the course of this study. It must be noted that additional compounds not searched for during the current study may be present in the soil, soil vapor and/or groundwater at the site. PAYNE has relied upon the data provided by the analytical laboratory, and has not conducted an independent evaluation of the reliability of these data. Moreover, it should be noted that distributions within the groundwater, soil vapor and soil might occur due to the passage of time, seasonal water table fluctuations, recharge events, and other factors.
10. The conclusions and recommendations contained in this report are based in part upon various types of chemical data. While PAYNE has reviewed the data and information as stated in this report, any of PAYNE's interpretations, conclusions and recommendations that have relied on that information will be contingent on its validity. Should additional chemical data, historical information or hydrogeological information become available in the future, such information should be reviewed by PAYNE and the interpretations, conclusions and recommendations presented herein should be modified accordingly.
11. The report has been prepared for the exclusive use of the Ansonia Housing Authority & the Housing Authority of New Haven for the specific application of the property known as the Riverside Apartments located on Olson Drive, Ansonia, Connecticut in accordance with prevailing standards and the requirements of Connecticut Department of Energy & Environmental Protection (DEEP) RSRs and the *Site Characterization Guidance Document*. No person or other body shall be entitled to rely upon or use information presented in this report without written consent of PAYNE Environmental LLC.
12. The analyses and recommendations contained in this report are based on the data obtained from the referenced subsurface explorations. The explorations indicate subsurface conditions only at the specific locations and times, and only to the depths penetrated. They do not necessarily reflect strata variations that may exist between such locations.

13. In the event that any changes in the nature, design, or location of the facilities are planned, the conclusions and recommendations contained in this report should not be considered valid unless the changes are reviewed and conclusions of this report modified or verified in writing by PAYNE. PAYNE is not responsible for any claims, damages or liability associated with interpretation of subsurface data or re-use of the subsurface data or engineering analyses without the express written authorization of PAYNE.

14. In performing this site assessment, PAYNE has endeavored to conform with generally accepted practices of other consultants undertaking similar studies at the same time and in the same geographical area. PAYNE has attempted to observe a degree of care and skill generally exercised by the technical community under similar circumstances and conditions. PAYNE's findings and conclusions must be considered probabilities based on professional judgment concerning the significance of the limited data gathered during the course of the site assessment.

6. **Criteria depicted in bold exceed one or more RSR criterion.**

TABLE 6

PCB Caulk/Sealant Sample Results
Riverside Apartments
Ansonia, CT

SAMPLE ID	MATERIAL TYPE	GENERAL LOCATION	TOTAL PCBs (mg/kg)
PE-1	Gray rubbery window caulk	Community Center – exterior window located southeast side of bldg	3.6
PE-2	Gray brittle window caulk	Bldg #3 – lower window on west side	3.4
PE-3	Gray brittle window caulk	Bldg #3 – lower window on north side	0.8
PE-4	Gray brittle window caulk	Bldg #3 – lower window on east side	0.8
PE-5	Gray-yellow rubbery caulk	Bldg #4 – lower window on south side	3.6
PE-6	White brittle caulk	Bldg #4 – 1 st floor window on west side	BRL
PE-7	White/gray brittle caulk	Bldg #4 – expansion joint on north side	7.0
PE-8	White brittle caulk	Bldg #4 – 1 st floor window on east side	3.0
PE-9	Gray-yellow rubbery caulk	Bldg #5 – lower window on south side	3.1
PE-10	Gray rubbery caulk	Bldg #5 – 1 st floor window east side	BRL
PE-11	White/gray brittle caulk	Bldg #5 – expansion joint south side	3.9
PE-12	Hard rubbery white caulk	Bldg #6 – 1 st floor window on NW side	BRL
PE-13	Brown rubbery caulk	Bldg #6 – air vent sealant	BRL
PE-14	White/gray rubbery caulk	Bldg #6 – lower window caulk on east side	1.1
PE-15	White brittle caulk	Bldg #7 – 1 st floor lower window caulk on west side	BRL
PE-16	Light yellow rubbery caulk	Bldg #7 – lower window caulk on north side	0.5
PE-17	Light yellow rubbery caulk	Bldg #7 – lower window caulk on south side	0.6
PE-18	Brown rubbery caulk	Maintenance Bldg – 1 st floor window caulk on north side	BRL
PE-19	Offwhite brittle caulk	Bldg #6 – under existing window frame	5.9
PE-20	Offwhite soft/rubbery caulk	Bldg #6 – under existing window frame	3.7

1. PCBs – Polychlorinated Biphenyls by SW846 Method 8082A/3540C
2. Samples PE-1 through PE-18 collected on 8/22/12
3. Samples PE-19 & PE-20 collected on 8/25/12
4. BRL – Below Reportable Limit
5. PCB caulk/sealant ≥ 50 ppm is defined as PCB Bulk Product Waste under EPA 40 CFR 761.62
6. PCB caulk/sealant >1 and < 50 ppm regulated by CTDEEP

Authorized by:

Nicole Leja
Laboratory Director

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.

Please note that this report contains 110 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

**Reasonable Confidence Protocols
Laboratory Analysis
QA/QC Certification Form**

Laboratory Name: Spectrum Analytical, Inc.

Client: Payne Environmental, LLC - New Haven, CT

Project Location: Riverside Apts - Ansonia, CT

Project Number: 12.110/001

Sampling Date(s):

8/16/2012 through 8/17/2012

Laboratory Sample ID(s):

SB54882-01 through SB54882-45

RCP Methods Used:

CT ETPH
SW846 1312
SW846 1312/6010C
SW846 6010C
SW846 8082A
SW846 8270D

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents?	✓ Yes	No
1A	Were the method specified preservation and holding time requirements met?	✓ Yes	No
1B	<i>VPH and EPH methods only:</i> Was the VPH or EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	Yes	No
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	✓ Yes	No
3	Were samples received at an appropriate temperature?	✓ Yes	No
4	Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved?	Yes	✓ No
5	a) Were reporting limits specified or referenced on the chain-of-custody? b) Were these reporting limits met?	Yes Yes	✓ No No
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	Yes	✓ No
7	Are project-specific matrix spikes and laboratory duplicates included in this data set?	✓ Yes	No

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for obtaining the information contained in this analytical report, such information is accurate and complete.

Nicole Leja
Laboratory Director
Date: 9/14/2012

CASE NARRATIVE:

The samples were received 2.0 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

Required site-specific Matrix Spike/Matrix Spike Duplicate (MS/MSD) must be requested by the client and sufficient sample must be submitted for the additional analyses. Samples submitted with insufficient volume/weight will not be analyzed for site specific MS/MSD, however a batch MS/MSD may be analyzed from a non-site specific sample.

CTDEP has published a list of analytical methods which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of decisions being made utilizing the Reasonable Confidence Protocol (RCP). "Reasonable Confidence" can be established only for those methods published by the CTDEP in the RCP guidelines. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

The CTDEP RCP requests that "all non-detects and all results below the reporting limit are reported as ND (Not Detected at the Specified Reporting Limit)". All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

If no reporting limits were specified or referenced on the chain-of-custody the laboratory's practical quantitation limits were applied.

Tetrachloro-m-xylene is recommended as a surrogate by the CTDEP RCP for the following SW846 Methods 8081, 8082 and 8151. Spectrum Analytical, Inc. uses Tetrachloro-m-xylene as the Internal Standard for these methods and Dibromooctafluorobiphenyl as the surrogate.

For this work order, the reporting limits have not been referenced or specified.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

CT ETPH

Spikes:

1220660-MSD1 *Source: SB54882-37*

RPD out of acceptance range.

C9-C36 Aliphatic Hydrocarbons

Samples:

S210454-CCV1

Analyte percent difference is outside individual acceptance criteria (30), but within overall method allowances.

n-Nonane (-31.8%)

This affected the following samples:

1220656-BLK1

S210454-CCV2

Analyte percent difference is outside individual acceptance criteria (30), but within overall method allowances.

n-Hexatriacontane (49.7%)

This affected the following samples:

1220656-BLK1

SB54882-02 *SB-15 (5-7)*

Notes and Definitions

GS1	Sample dilution required for high concentration of target analytes to be within the instrument calibration range.
QM4	Visual evaluation of the sample indicates the RPD is above the control limit due to a non-homogeneous sample matrix.
QM4X	The spike recovery was outside of QC acceptance limits for the MS, MSD and/or PS due to analyte concentration at 4 times or greater the spike concentration. The QC batch was accepted based on LCS and/or LCSD recoveries within the acceptance limits.
QM7	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM9	The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.
QR5	RPD out of acceptance range.
QR6	The RPD exceeded the QC control limits; however precision is demonstrated with acceptable RPD values for MS/MSD.
R01	The Reporting Limit has been raised to account for matrix interference.
S02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).

Interpretation of Total Petroleum Hydrocarbon Report

Petroleum identification is determined by comparing the GC fingerprint obtained from the sample with a library of GC fingerprints obtained from analyses of various petroleum products. Possible match categories are as follows:

- Gasoline - includes regular, unleaded, premium, etc.
- Fuel Oil #2 - includes home heating oil, #2 fuel oil, and diesel
- Fuel Oil #4 - includes #4 fuel oil
- Fuel Oil #6 - includes #6 fuel oil and bunker "C" oil
- Motor Oil - includes virgin and waste automobile oil
- Ligroin - includes mineral spirits, petroleum naphtha, vm&p naphtha
- Aviation Fuel - includes kerosene, Jet A and JP-4
- Other Oil - includes lubricating and cutting oil, and silicon oil

At times, the unidentified petroleum product is quantified using a calibration that most closely approximates the distribution of compounds in the sample. When this occurs, the result is qualified as Calculated as.

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Authorized by:

Nicole Leja
Laboratory Director

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.

Please note that this report contains 61 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

**Reasonable Confidence Protocols
Laboratory Analysis
QA/QC Certification Form**

Laboratory Name: Spectrum Analytical, Inc.

Client: Payne Environmental, LLC - New Haven, CT

Project Location: Riverside Apts - Ansonia, CT

Project Number: 12-110/001

Sampling Date(s):

Laboratory Sample ID(s):

8/22/2012

SB55111-01 through SB55111-45

RCP Methods Used:

- SW846 1312
- SW846 1312/6010C
- SW846 6010C
- SW846 8082A

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents?	✓ Yes	No
1A	Were the method specified preservation and holding time requirements met?	✓ Yes	No
1B	<i>VPH and EPH methods only:</i> Was the VPH or EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	Yes	No
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	✓ Yes	No
3	Were samples received at an appropriate temperature?	✓ Yes	No
4	Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved?	Yes	✓ No
5	a) Were reporting limits specified or referenced on the chain-of-custody? b) Were these reporting limits met?	Yes Yes	✓ No No
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	Yes	✓ No
7	Are project-specific matrix spikes and laboratory duplicates included in this data set?	✓ Yes	No

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for obtaining the information contained in this analytical report, such information is accurate and complete.

 Nicole Leja
 Laboratory Director
 Date: 9/14/2012

CASE NARRATIVE:

The samples were received 0.6 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

Required site-specific Matrix Spike/Matrix Spike Duplicate (MS/MSD) must be requested by the client and sufficient sample must be submitted for the additional analyses. Samples submitted with insufficient volume/weight will not be analyzed for site specific MS/MSD, however a batch MS/MSD may be analyzed from a non-site specific sample.

CTDEP has published a list of analytical methods which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of decisions being made utilizing the Reasonable Confidence Protocol (RCP). "Reasonable Confidence" can be established only for those methods published by the CTDEP in the RCP guidelines. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

The CTDEP RCP requests that "all non-detects and all results below the reporting limit are reported as ND (Not Detected at the Specified Reporting Limit)". All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

If no reporting limits were specified or referenced on the chain-of-custody the laboratory's practical quantitation limits were applied.

Tetrachloro-m-xylene is recommended as a surrogate by the CTDEP RCP for the following SW846 Methods 8081, 8082 and 8151. Spectrum Analytical, Inc. uses Tetrachloro-m-xylene as the Internal Standard for these methods and Dibromooctafluorobiphenyl as the surrogate.

For this work order, the reporting limits have not been referenced or specified.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

SW846 6010C

Laboratory Control Samples:

1221058 SRM/SRMD

Arsenic percent recoveries (87/83) are outside individual acceptance criteria, but within overall method allowances. All reported results of the following samples are considered to have a potentially low bias:

- HA-22
- HA-23
- HA-24
- HA-25
- HA-26
- HA-27
- HA-28
- HA-29
- HA-30
- HA-31
- HA-32
- HA-33
- HA-34
- HA-35
- HA-36
- HA-37
- HA-38
- HA-39
- HA-40
- HA-41

SW846 6010C

Spikes:

1221058-MS1 *Source: SB55111-40*

The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

Lead

1221058-MSD1 *Source: SB55111-40*

The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

Lead

Duplicates:

1221058-DUP1 *Source: SB55111-40*

The RPD exceeded the QC control limits; however precision is demonstrated with acceptable RPD values for MS/MSD.

Lead

SW846 8082A

Spikes:

1220846-MSD1 *Source: SB55111-12*

The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.

Decachlorobiphenyl (Sr)

1220904-MSD1 *Source: SB55111-33*

The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.

Decachlorobiphenyl (Sr)

Duplicates:

1220846-DUP1 *Source: SB55111-12*

Analyses are not controlled on RPD values from sample concentrations that are less than 5 times the reporting level. The batch is accepted based upon the difference between the sample and duplicate is less than or equal to the reporting limit.

Aroclor-1260 [2C]

Samples:

SB55111-02 *HA-3*

The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.

4,4-DB-Octafluorobiphenyl (Sr)

SB55111-16 *HA-17*

The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.

Decachlorobiphenyl (Sr)

SB55111-26 *HA-27*

SW846 8082A

Samples:

SB55111-26 *HA-27*

The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.

Decachlorobiphenyl (Sr)

SB55111-28 *HA-29*

The Reporting Limit has been raised to account for matrix interference.

- Aroclor-1016
- Aroclor-1221
- Aroclor-1232
- Aroclor-1242
- Aroclor-1248
- Aroclor-1254

The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.

Decachlorobiphenyl (Sr)

SB55111-44 *HA-45*

The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.

Decachlorobiphenyl (Sr)

Notes and Definitions

QM7	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM9	The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.
QR6	The RPD exceeded the QC control limits; however precision is demonstrated with acceptable RPD values for MS/MSD.
QR8	Analyses are not controlled on RPD values from sample concentrations that are less than 5 times the reporting level. The batch is accepted based upon the difference between the sample and duplicate is less than or equal to the reporting limit.
R01	The Reporting Limit has been raised to account for matrix interference.
S02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

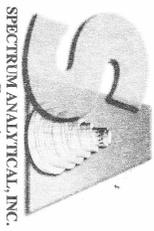

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Authorized by:

Nicole Leja
Laboratory Director

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.

Please note that this report contains 42 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

Laboratory Name: Spectrum Analytical, Inc.

Client: Payne Environmental, LLC - New Haven, CT

Project Location: Riverside Apts - Ansonia, CT

Project Number: 12.110/001

Sampling Date(s):

Laboratory Sample ID(s):

8/22/2012

SB55124-01 through SB55124-06

RCP Methods Used:

CT ETPH
SW846 6010C
SW846 8260C
SW846 8270D SIM

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents?	✓ Yes	No
1A	Were the method specified preservation and holding time requirements met?	✓ Yes	No
1B	<i>VPH and EPH methods only:</i> Was the VPH or EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	Yes	No
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	✓ Yes	No
3	Were samples received at an appropriate temperature?	✓ Yes	No
4	Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved?	Yes	✓ No
5	a) Were reporting limits specified or referenced on the chain-of-custody? b) Were these reporting limits met?	Yes Yes	✓ No No
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	Yes	✓ No
7	Are project-specific matrix spikes and laboratory duplicates included in this data set?	✓ Yes	No

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for obtaining the information contained in this analytical report, such information is accurate and complete.

 Nicole Leja
 Laboratory Director
 Date: 9/6/2012

CASE NARRATIVE:

The samples were received 0.9 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

Required site-specific Matrix Spike/Matrix Spike Duplicate (MS/MSD) must be requested by the client and sufficient sample must be submitted for the additional analyses. Samples submitted with insufficient volume/weight will not be analyzed for site specific MS/MSD, however a batch MS/MSD may be analyzed from a non-site specific sample.

CTDEP has published a list of analytical methods which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of decisions being made utilizing the Reasonable Confidence Protocol (RCP). "Reasonable Confidence" can be established only for those methods published by the CTDEP in the RCP guidelines. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

The CTDEP RCP requests that "all non-detects and all results below the reporting limit are reported as ND (Not Detected at the Specified Reporting Limit)". All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

If no reporting limits were specified or referenced on the chain-of-custody the laboratory's practical quantitation limits were applied.

According to CTDEP RCP Quality Assurance and Quality Control Requirements for VOCs by method 8260, SW-846 version 1, 7/28/05 Table 1A, recovery for some VOC analytes have been deemed potentially difficult.

For this work order, the reporting limits have not been referenced or specified.

Effective 8/8/2012, the reporting limit for CT ETPH has been raised as proposed by the CT DEP from 0.100 mg/L to 0.200 mg/L for aqueous samples. This Reporting Limit is still lower than the CT DEP proposed Reporting Limit of 0.250 mg/L.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

SW846 8260C

Calibration:

1208066

Analyte quantified by quadratic equation type calibration.

Notes and Definitions

QC2	Analyte out of acceptance range in QC spike but no reportable concentration present in sample.
QM9	The spike recovery for this QC sample is outside the established control limits. The sample results for the QC batch were accepted based on LCS/LCSD or SRM recoveries within the control limits.
QR5	RPD out of acceptance range.
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Interpretation of Total Petroleum Hydrocarbon Report

Petroleum identification is determined by comparing the GC fingerprint obtained from the sample with a library of GC fingerprints obtained from analyses of various petroleum products. Possible match categories are as follows:

- Gasoline - includes regular, unleaded, premium, etc.
- Fuel Oil #2 - includes home heating oil, #2 fuel oil, and diesel
- Fuel Oil #4 - includes #4 fuel oil
- Fuel Oil #6 - includes #6 fuel oil and bunker "C" oil
- Motor Oil - includes virgin and waste automobile oil
- Ligroin - includes mineral spirits, petroleum naphtha, vm&p naphtha
- Aviation Fuel - includes kerosene, Jet A and JP-4
- Other Oil - includes lubricating and cutting oil, and silicon oil

At times, the unidentified petroleum product is quantified using a calibration that most closely approximates the distribution of compounds in the sample. When this occurs, the result is qualified as Calculated as.

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

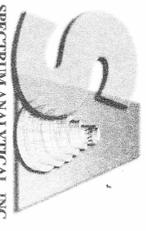

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Laboratory Director

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.

Please note that this report contains 25 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

**Reasonable Confidence Protocols
Laboratory Analysis
QA/QC Certification Form**

Laboratory Name: Spectrum Analytical, Inc.

Client: Payne Environmental, LLC - New Haven, CT

Project Location: Riverside Apts - Ansonia, CT

Project Number: 12.110/001

Sampling Date(s):

Laboratory Sample ID(s):

8/22/2012

SB55190-01 through SB55190-18

RCP Methods Used:

SW846 8082A

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents?	✓ Yes	No
1A	Were the method specified preservation and holding time requirements met?	✓ Yes	No
1B	<i>VPH and EPH methods only:</i> Was the VPH or EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	Yes	No
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	✓ Yes	No
3	Were samples received at an appropriate temperature?	✓ Yes	No
4	Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved?	✓ Yes	No
5	a) Were reporting limits specified or referenced on the chain-of-custody? b) Were these reporting limits met?	Yes Yes	✓ No No
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	✓ Yes	No
7	Are project-specific matrix spikes and laboratory duplicates included in this data set?	Yes	✓ No

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for obtaining the information contained in this analytical report, such information is accurate and complete.

Nicole Leja
Laboratory Director
Date: 9/6/2012

CASE NARRATIVE:

The samples were received 0.6 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

Required site-specific Matrix Spike/Matrix Spike Duplicate (MS/MSD) must be requested by the client and sufficient sample must be submitted for the additional analyses. Samples submitted with insufficient volume/weight will not be analyzed for site specific MS/MSD, however a batch MS/MSD may be analyzed from a non-site specific sample.

CTDEP has published a list of analytical methods which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of decisions being made utilizing the Reasonable Confidence Protocol (RCP). "Reasonable Confidence" can be established only for those methods published by the CTDEP in the RCP guidelines. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

The CTDEP RCP requests that "all non-detects and all results below the reporting limit are reported as ND (Not Detected at the Specified Reporting Limit)". All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

If no reporting limits were specified or referenced on the chain-of-custody the laboratory's practical quantitation limits were applied.

Tetrachloro-m-xylene is recommended as a surrogate by the CTDEP RCP for the following SW846 Methods 8081, 8082 and 8151. Spectrum Analytical, Inc. uses Tetrachloro-m-xylene as the Internal Standard for these methods and Dibromooctafluorobiphenyl as the surrogate.

For this work order, the reporting limits have not been referenced or specified.

See below for any non-conformances and issues relating to quality control samples and/or sample analysis/matrix.

SW846 8082A

Samples:

SB55190-10 *PE-10*

The Reporting Limit has been raised to account for matrix interference.

- Aroclor-1254
- Aroclor-1260
- Aroclor-1262
- Aroclor-1268

SB55190-12 *PE-12*

The Reporting Limit has been raised to account for matrix interference.

- Aroclor-1254

Notes and Definitions

R01	The Reporting Limit has been raised to account for matrix interference.
dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

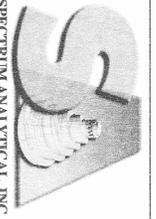

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Authorized by:

Nicole Leja
Laboratory Director

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.

Please note that this report contains 7 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at www.spectrum-analytical.com for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).

Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.

**Reasonable Confidence Protocols
Laboratory Analysis
QA/QC Certification Form**

Laboratory Name: Spectrum Analytical, Inc.

Client: Payne Environmental, LLC - New Haven, CT

Project Location: Riverside Apts - Ansonia, CT

Project Number: 12.110/001

Sampling Date(s):

Laboratory Sample ID(s):

8/25/2012

SB55280-01 through SB55280-02

RCP Methods Used:

SW846 8082A

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents?	✓ Yes	No
1A	Were the method specified preservation and holding time requirements met?	✓ Yes	No
1B	<i>VPH and EPH methods only:</i> Was the VPH or EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	Yes	No
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	✓ Yes	No
3	Were samples received at an appropriate temperature?	✓ Yes	No
4	Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved?	✓ Yes	No
5	a) Were reporting limits specified or referenced on the chain-of-custody? b) Were these reporting limits met?	Yes Yes	✓ No No
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	✓ Yes	No
7	Are project-specific matrix spikes and laboratory duplicates included in this data set?	Yes	✓ No

Note: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for obtaining the information contained in this analytical report, such information is accurate and complete.

Nicole Leja
Laboratory Director
Date: 9/6/2012

CASE NARRATIVE:

The samples were received 3.0 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

Required site-specific Matrix Spike/Matrix Spike Duplicate (MS/MSD) must be requested by the client and sufficient sample must be submitted for the additional analyses. Samples submitted with insufficient volume/weight will not be analyzed for site specific MS/MSD, however a batch MS/MSD may be analyzed from a non-site specific sample.

CTDEP has published a list of analytical methods which provides a series of recommended protocols for the acquisition, analysis and reporting of analytical data in support of decisions being made utilizing the Reasonable Confidence Protocol (RCP). "Reasonable Confidence" can be established only for those methods published by the CTDEP in the RCP guidelines. The compounds and/or elements reported were specifically requested by the client on the Chain of Custody and in some cases may not include the full analyte list as defined in the method. Regulatory limits may not be achieved if specific method and/or technique was not requested on the Chain of Custody.

The CTDEP RCP requests that "all non-detects and all results below the reporting limit are reported as ND (Not Detected at the Specified Reporting Limit)". All non-detects and all results below the reporting limit are reported as "<" (less than) the reporting limit in this report.

If no reporting limits were specified or referenced on the chain-of-custody the laboratory's practical quantitation limits were applied.

Tetrachloro-m-xylene is recommended as a surrogate by the CTDEP RCP for the following SW846 Methods 8081, 8082 and 8151. Spectrum Analytical, Inc. uses Tetrachloro-m-xylene as the Internal Standard for these methods and Dibromooctafluorobiphenyl as the surrogate.

For this work order, the reporting limits have not been referenced or specified.

There is no relevant protocol-specific QC and/or performance standards non-conformances to report.

Notes and Definitions

dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

Laboratory Control Sample (LCS): A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

Matrix Duplicate: An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

Matrix Spike: An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

Method Blank: An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

Method Detection Limit (MDL): The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

Reportable Detection Limit (RDL): The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

Surrogate: An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

Continuing Calibration Verification: The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.
